Regulatory Information

/!\ RF Exposure Guidelines

Reducing RF Exposure – Use Properly

Only operate the device in accordance with the instructions supplied. The device complies with internationally recognized standards covering human exposure to electromagnetic fields from radio devices. For information on "International" human exposure to electromagnetic fields refer to the Zebra Declaration of Conformity (DoC) at http://www.zebra.com/doc.
For further information on the safety of RF energy from wireless devices, see

esponsibility.zebra.com/index.php/downloads/, which is located under Wireless Communications Europe

Remote and Standalone Antenna Configurations - To comply with EU RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all US and Canada
To comply with FCC RF exposure compliance requirement, the antenna used for this transmitter must

not be co-located or operating in conjunction with any other transmitter/antenna except those already

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment This equipment should be installed and operated with minimum distance 20cm between the radiator and

your body. NOTE IMPORTANTE: (Pour l'utilisation de dispositifs mobiles)

Déclaration d'exposition aux radiations:

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

Remote and Standalone Antenna Configurations
To comply with FCC RF exposure requirements, antennas that are mounted externally at remote locations or operating near users at stand-alone desktop of similar configurations must operate with a minimum separation distance of 20 cm from all persons

Radio Frequency Interference Requirements-FCC
Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on the user is encouraged to try to correct the interference by one or more of the

Statement of Compliance

Zebra hereby declares that this radio equipment is in compliance with Directive 2011/65/EU and 1999/5/EC or 2014/53/EU (2014/53/EU supersedes 1999/5/EC from 13th June 2017). The full text of the EU Declaration of Conformity is available at the following internet address: http://www.zebra.com/doc

Warnings for Use of Wireless Devices
Caution: Please observe all warning notices with regard to the usage of wireless devices

Potentially Hazardous Atmospheres - Vehicles Use

You are reminded of the need to observe restrictions on the use of radio devices in fuel depots, chemical plants, etc. and areas where the air contains chemicals or particles such as grain, dust, or metal powders and any other area where you would normally be advised to turn off your vehicle engine.

Wireless devices transmit radio frequency energy and may affect medical electrical equipment. Wireless devices should be switched off wherever you are requested to do so in hospitals, clinics or healthcare facilities. These requests are designed to prevent possible interference with sensitive medical equipment.

Pacemaker manufacturers recommended that a minimum of 15cm (6 inches) be maintained between a hand held wireless device and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with independent research and recommendations by Wireless Technology

- Should ALWAYS keep the device more than 15cm (6 inches) from their pacemaker when turned ON
- Should not carry the device in a breast pocket. Should use the ear furthest from the pacemaker to minimize the potential for interference
- If you have any reason to suspect that interference is taking place, turn OFF your device.

Please consult your physician or the manufacturer of the medical device, to determine if the operation of your wireless product may interfere with the medical device. Waste Electrical and Electronic Equipment (WEEE)

TURKISH WEEE Statement of Compliance

EEE Yönetmeliğine Uygundur

Introduction

The STB3678 cordless scanner cradle acts as charger and radio communication interface for the XX3678 cordless scanner. It can sit on a desktop or be mounted on a

The STB3678 cradle receives data from the scanner via a Bluetooth radio, and sends that data to the host through an attached cable. The cradle also charges the scanner's internal battery pack when the scanner is inserted. The scanner can be charged from an external power supply or a powered host cable.

This document provides basic instructions on setting up and using the cradle. Any discussion of transmission of information refers specifically to the STB3678 cradle.

CAUTION LS3578 and DS3578 cordless scanners are incompatible with STB3678 cradles

Equipment Supplied

The cradle package includes:

- · Four rubber feet (for desk mounting).
- Accessories
- The following equipment may be needed:
- Three 1.5" #8 Philips head screws (for wall mounting, if applicable, not available from Zebra)
- · Power supply for desk/wall mounting configuration.

Save the shipping container for storing or shipping. Inspect all equipment for damage. If anything is damaged or missing, call an authorized Zebra Support Center immediately.

This documentation is available at: www.zebra.com/support.

Cradle Connections

IMPORTANT Connect the interface cable and power supply (if necessary) in the following order to ensure proper operation of the scanner

- 1. Connect the appropriate cable to the power supply and an AC power source, if necessary. This will ensure detection of the host and prevent inadvertently back powering the cradle from improper detection of the host.
- **2.** Insert the interface cable into the host port. 3. Lift the latch and connect the interface
- cable into the cradle's host port, then close the latch
- 4. If applicable, thread the interface cable over the cable support hook and run the host and power cables into their respective cable grooves.
- **5.** Pair the scanner to the cradle either by inserting it in the cradle (if Pair on Contacts is enabled) or by scanning the pairing bar
- 6. If necessary, scan the appropriate host bar code (for non-autodetected interfaces). Refer to the Product Reference Guide.

Latch (Under Latch)

Changing the Host Interface

To connect to a different host, or to the same host through a different cable:

- 1. Unplug the interface cable from the host.
- 2. Unplug the power supply from the cradle.
- 3. Connect the interface cable to the new host, or the new interface cable to the existing host.
- 4. Reconnect the power supply, if required.
- 5. If necessary, scan the appropriate host bar code (for non-autodetected interfaces). Refer to the Product Reference Guide.

Using a Host Interface to Supply Power

Some hosts can provide power to the cradle via the host interface, instead of an external power supply.

CAUTIONAlways disconnect the DC power supply BEFORE disconnecting the cable to the host end or the cradle may not recognize the new host.

Cradle Parts

Mounting the Cradle

Horizontal Mount

- 1. Ensure the desk/wall mount converter knob is in the correct position, shown at right.
- 2. If mounting the cradle horizontally where no fastening is necessary, peel the protective paper from the back of the rubber feet included with the cradle packaging, and attach the feet to the cradle at the indentations in the plastic. These feet provide traction and prevent surface damage

/ NOTE Do not use the rubber feet when mounting in a vertical orientation.

To mount the cradle on a vertical surface:

- 1. Use a Philips screwdriver to turn the desk/wall mount converter knob to the position shown below. The front latches protract to engage the depressions at the base of the scanner's handle
- 2. Attach the interface and power
- cables (see Cradle Connections). 3. Press the cables into the cable arooves.
- 4. Position the cradle on the mounting surface, or use the template included in this guide.
- 5. Mark the surface through the three holes on the bottom of the cradle, or use the mounting template to determine the location of the screw holes.
- **6.** Pre-drill holes to accommodate
- three 1.5" #8 Philips head screws. **7.** Attach the cradle securely to the surface.
- 8. Place the scanner in the cradle.

Inserting the Scanner in the Cradle

/ CAUTION Do not pour, spray, or spill any liquid on the cradle.

To insert the scanner in the cradle:

· Insert the scanner top first. Push the handle until it clicks into place, engaging the contacts in the cradle and scanner.

Sending Data to the Host Computer

The cradle receives data from the scanner via a wireless radio connection and transmits it to the host computer via the host cable. The scanner and cradle must be paired for successful wireless communication.

Pairing

NOTE The pairing bar code that connects the scanner to a cradle is unique to

Do not scan data or parameters until pairing completes.

Pairing registers a scanner to the cradle such that the scanner and cradle can exchange information. The STB3678 operates in two modes: Point-to-Point and Multipoint-to-Point. In Point-to-Point mode, pair the scanner to the cradle either by inserting it in the cradle (if pair on contacts is enabled), or by scanning the pairing bar code. In Multipoint-to-Point mode, you can pair up to seven scanners to one cradle.

To pair the scanner with the cradle, scan a pairing bar code. A high-low-high-low beep sequence followed by a low-high beep sequence indicates successful pairing and connection to the remote device. A long low, long high beep sequence indicates unsuccessful pairing.

Lost Connection to Host

If scanned data does not transmit to the cradle's host, ensure that all cables are firmly inserted and the power supply is connected to an appropriate AC outlet, if applicable. If scanned data still does not transmit to the host, reestablish a connection with the host

- Disconnect the power supply from the cradle.
- Disconnect the host interface cable from the cradle
- Wait three seconds.
- Reconnect the host interface cable to the cradle.
- Reconnect the power supply to the cradle, if required.
- 6. Reestablish pairing with the cradle by scanning the pairing bar code.

Charging the Scanner Battery in the Cradle

When using a new battery in the scanner, the battery requires a charge to be enabled. Insert the battery in the scanner and place the scanner in the STB3678 cradle (see Inserting the Scanner in the Cradle). The battery begins charging when the scanner LED indicator starts flashing amber. The battery is fully charged when the cradle LED is solid green. A complete charge of a fully discharged battery can take up to three hours using external power and up to ten hours using the USB interface cable.

Cradle LED Indicators

LED	Indication		
Green	Power on		
Green flashing	Bluetooth connection established		
Blue	Page button		
Battery Indications			
Amber	Pre-charging		
Amber Blinking	Charging		
Amber fast blinking	Charging error		
Green	Fully charged		

Troubleshooting

If the cradle does not work after following the previous procedures:

- Check the system power.
- Check for loose cable connections.
- · Check that the scanner is inserted properly in the cradle.
- · Check that the host settings are correct and the cradle is connected to the appropriate port on the host

STB3678 Wall Mount Template

NOTE When printing the STB3678 QRG which includes the wall mount template, ensure the dimensions print correctly by setting the Page Sizing and Handling to Actual Size.
