

# **Integrated Scanner**

---

## **Bar Code Programming Guide**

For:

MX3Plus with Windows® CE 5

MX7 with Windows® CE 5

MX7 Tecton with Windows® CE 6 or with Windows® Mobile® 6.5

MX8 with Windows® CE 5 or with Windows® Mobile® 6.1

MX9 with Windows® CE 5 or with Windows® Mobile® 6.5

---

# Table of Contents

## Chapter 1 - Introduction

Ring Scanners and Ring Imagers .....	1-1
Integrated Scanners and Integrated Imagers .....	1-1
Tethered and Wireless Scanners.....	1-1
Cautions and Warnings.....	1-1
Bar Code Readers .....	1-2
Bar Code Reader and Device Chart .....	1-2
Return to Factory Default Settings .....	1-2
How To Scan a Bar Code .....	1-3
Scan a Linear Bar Code.....	1-3
Scan a 2D Bar Code .....	1-3
Good Read / Bad Read Indicators .....	1-4
Factors That May Impact Decode Performance .....	1-4
Bar Code Quality.....	1-4
Bar Code Source.....	1-4
Bar Code Symbology .....	1-4
Lens Damage.....	1-4
Ambient Lighting .....	1-4
Temperature.....	1-5
Bar Code Help.....	1-5
Printing Bar Codes.....	1-5
Miscellaneous Programmable Bar Codes.....	1-5
Beep After Good Decode .....	1-5
Beeper Frequency Adjustment.....	1-5
Beep on <BEL>.....	1-6
Beeper Tone / Beeper Volume.....	1-6
Event Reporting .....	1-6
LED Mode .....	1-6
Return to Factory Default Settings .....	1-6
Cleaning the Beam Aperture.....	1-6

## Chapter 2 - EV-15 Imager

Introduction .....	2-1
Reset to Factory Defaults .....	2-1
Print a Page .....	2-1
Reset to Factory Defaults using the LXEReset Bar Code .....	2-1
Pre-Configured Default Values .....	2-2
Frequently Used Bar Codes.....	2-5
Reset to Factory Defaults Bar Code .....	2-5
EV-15 Configuration Modes.....	2-6
Configuration.....	2-6
Transparent Configuration Mode .....	2-6
Symbology Settings .....	2-6
EV-15 Parameters - General .....	2-7

---

Scanning/Triggering.....	2-7
Level Triggering Mode Timeout.....	2-8
Aiming Beam .....	2-10
Aiming Beam Duration.....	2-10
Data Decoding Security.....	2-11
Data Decoding Timeout.....	2-13
Read Optimization .....	2-14
Sensor Optimization .....	2-14
Lighting .....	2-15
Power Hold .....	2-15
EV-15 Data Transmission Parameters .....	2-16
Symbology Identifier .....	2-16
Preamble .....	2-16
Postamble.....	2-17
Scanner Parameters – Bar Code Type Specific.....	2-18
Codabar.....	2-18
Start/Stop.....	2-18
CLSI Library System.....	2-19
Check Digit (AIM Recommendation) .....	2-20
Bar Code Length.....	2-20
Concatenation.....	2-20
Transmit.....	2-21
Start/Stop.....	2-21
Codablock.....	2-22
Codablock A .....	2-22
Codablock F.....	2-22
Code 11 .....	2-23
Code 39 .....	2-25
Format .....	2-25
Start/Stop.....	2-26
Check Digit .....	2-27
Bar Code Length.....	2-28
Reading Range / Tolerance .....	2-29
Code 93 / Code 93i.....	2-30
Code 128 / EAN 128.....	2-31
Custom Symbology Identifier.....	2-31
EAN 128 Identifier.....	2-32
CIP 128 French Pharmaceutical Code .....	2-32
FNC1 Separator Character .....	2-32
Bar Code Length.....	2-33
Reading Range.....	2-33
Tolerance.....	2-34
ISBT 128.....	2-35
ISBT 128 Transmit.....	2-35
ISBT 128 Concatenate .....	2-36
GTIN Processing for EAN 128.....	2-36
Interleaved 2 of 5.....	2-37
Reading Range.....	2-37

Check Digit .....	2-38
Bar Code Length.....	2-39
Compose Minimum Length .....	2-39
Matrix 2 of 5 .....	2-40
MSI Code.....	2-41
Check Digit .....	2-42
Bar Code Length.....	2-42
Plessey Code.....	2-43
Check Digit .....	2-43
Bar Code Length.....	2-44
GS1 DataBar (RSS) Code .....	2-45
GS1 DataBar Limited (RSS Limited) .....	2-45
GS1 DataBar Expanded (RSS expanded).....	2-46
Standard 2 of 5 Code.....	2-47
Format .....	2-47
Check Digit Mod 10 .....	2-48
Bar Code Length.....	2-48
Telepen.....	2-49
UPC / EAN.....	2-50
UPC-A.....	2-50
UPC-E.....	2-50
EAN-8 .....	2-50
EAN-13 .....	2-51
UPC-E1.....	2-51
Custom Symbology Identifier .....	2-52
Add-on Digits .....	2-53
Check Digit .....	2-54
UPC Number System .....	2-56
Transmit As.....	2-57
Reading Range.....	2-59

### **Chapter 3 - 5300 2D Imager**

Introduction.....	3-1
MX8 CE 5 .....	3-1
Mobile Device with a Windows Mobile operating system .....	3-1
Data Collection Wedge Panel.....	3-1
Reset to Factory Defaults using the LXEReset Bar Code .....	3-1
Decoder .....	3-2
DecodeMode .....	3-2
LinearRange .....	3-2
LeaveLightsOn.....	3-2
AimTimer .....	3-3
Centering .....	3-3
Symbologies .....	3-4
Aztec.....	3-4

## Chapter 4 - 5380SF 2D Imager

Introduction .....	4-1
Symbologies Enabled (by Default) at Startup.....	4-1
Reset to Factory Defaults using the LXEReset Bar Code .....	4-2
Pre-Configured 5380SF 2D Imager Default Values .....	4-2
Frequently Used Bar Codes .....	4-6
Save or Discard Settings .....	4-6
Enable All Symbologies.....	4-6
Imager Parameters – General.....	4-7
Prefix / Suffix.....	4-7
Reset to Factory Defaults .....	4-7
Good Read Delay .....	4-8
User Specified Good Read Delay.....	4-8
Reread Delay.....	4-9
User Specified Reread Delay .....	4-9
LED Power Level.....	4-10
Aimer Delay .....	4-11
User-Specified Aimer Delay.....	4-11
Centering Scan Window .....	4-12
Print Weight .....	4-14
Working Orientation.....	4-15
Intercharacter, Interfunction and Intermesssage Delay.....	4-16
Intercharacter Delay .....	4-16
User-Specified Intercharacter Delay.....	4-16
Interfunction Delay.....	4-17
Intermessage Delay.....	4-17
Imager Parameters – Symbology Specific .....	4-18
All Symbologies On / Off.....	4-18
Codabar .....	4-18
Codabar Start/Stop Characters .....	4-19
Codabar Check Character .....	4-19
Codabar Concatenation.....	4-20
Codabar Message Length .....	4-21
Code 39 .....	4-22
Code 39 Start/Stop Characters.....	4-22
Code 39 Check Character .....	4-23
Code 39 Message Length.....	4-23
Code 39 Append.....	4-24
Code 32 Pharmaceutical (PARAF) .....	4-24
Code 39 Full ASCII .....	4-25
Code 39 Code Page .....	4-25
Interleaved 2 of 5.....	4-26
Check Digit .....	4-26
Interleaved 2 of 5 Message Length .....	4-27
Code 93 .....	4-28
Code 93 Message Length.....	4-28
Code 93 Code Page .....	4-29

---

Straight 2 of 5 Industrial.....	4-30
Straight 2 of 5 Industrial Message Length .....	4-30
Straight 2 of 5 IATA .....	4-31
Straight 2 of 5 IATA Message Length.....	4-31
Matrix 2 of 5.....	4-32
Matrix 2 of 5 Message Length .....	4-32
Code 11 .....	4-33
Code 11 Check Digits Required .....	4-33
Code 11 Message Length.....	4-34
Code 128 .....	4-35
ISBT 128 Concatenation.....	4-35
Code 128 Message Length.....	4-36
Code 128 Code Page .....	4-36

Symbols 0 – 9 .....	4-83
ASCII Conversion Chart (Code Page 1252) .....	4-84
ASCII Character Pairs .....	4-87
5380SF 2D Bar Codes Supported by Honeywell .....	4-88

## **Chapter 5 - NX3XX Laser Scanner**

Introduction .....	5-1
Identify the Scan Engine .....	5-1
Supported Bar Code Symbologies .....	5-1
Pre-Configured Default Values .....	5-2
Setting Custom Defaults .....	5-5
Resetting the Custom Defaults .....	5-5
Resetting the Factory Defaults .....	5-6
Scanner Parameters – General .....	5-6
Aimer Delay .....	5-6
Centering .....	5-9
Communication Check Character .....	5-10
Decode Security .....	5-11
Laser Scan Angle .....	5-12
No Read .....	5-12
Power Save Mode .....	5-13
Power Save Mode Timeout .....	5-13
Prefix/Suffix Overview .....	5-14
To Add a Prefix or Suffix .....	5-14
To Clear One or All Prefixes or Suffixes .....	5-15
To Add a Carriage Return Suffix to All Symbologies .....	5-15
Prefix Selections .....	5-15
Suffix Selections .....	5-16
Read Time-Out .....	5-17
Reread Delay .....	5-18
Show Data Format .....	5-19
Show Software Revision .....	5-19
User-Specified Reread Delay .....	5-19
Scanner Parameters - Symbologies .....	5-20
All Symbologies .....	5-20
Message Length Description .....	5-20
Codabar .....	5-21
Codabar On/Off .....	5-21
Codabar Start/Stop Characters .....	5-21
Codabar Check Character .....	5-22
Codabar Concatenation .....	5-24
Concatenation Timeout .....	5-25
Codabar Redundancy .....	5-25
Codabar Message Length .....	5-25
Code 39 .....	5-26
Code 39 On/Off .....	5-26
Code 39 Start/Stop Characters .....	5-26

---

## **Chapter 6 - Symbol Laser Scanner**

Introduction.....	6-1
Bar Code Decoder Types .....	6-1
Aiming Modes.....	6-2
SE1524 Scan Engine.....	6-2
SE955 Scan Engine.....	6-2
Aiming Dot .....	6-2
Pre-Configured Default Values - MX7, MX7 Tecton, MX9 .....	6-3
Pre-Configured Default Values - MX3Plus, MX8.....	6-7
Set Default Parameter .....	6-11
Set All Defaults .....	6-12
Max On Timer and the Laser On Time synchronization .....	6-12
Reset to Factory Defaults using the LXEReset Bar Code .....	6-12
Scanner Parameters – General.....	6-13
Aim Duration .....	6-13
Bi-Directional Redundancy .....	6-13
Disable All Symbologies .....	6-14
Data Options.....	6-14
Prefix and Suffix.....	6-14
Prefix .....	6-14
Suffix 1 .....	6-14
Suffix 2 .....	6-15
Scan Data Transmission Format .....	6-15
Transmit Code ID Character .....	6-17
Transmit No Code ID Character .....	6-17
Transmit Symbol Code ID Character .....	6-17
Transmit AIM Code ID Character .....	6-18
Laser On Time .....	6-20

# Introduction

Bar code laser scanners and laser imagers are used to read and then decode the data in bar codes.

Bar code readers have many forms -- some are enclosed in a hand held device, others are connected to a hand held device by a cable, some are connected to the hand held device wirelessly and a few bar code readers are enclosed in a ring device that is worn on the finger and cabled to a body-worn device.

Configuration bar codes in this guide are designed for a specific type of bar code decoder engine. Determining the type of bar code decoder engine for your Mobile Device is an important requirement before using it to scan a configuration bar code. If you are unsure, contact your System Administrator for assistance.

An asterisk (\*) next to an option indicates the default setting.

## ***Ring Scanners and Ring Imagers***

Ring Scanners and Ring Imagers are bar code readers that can be worn on either hand. They may be tethered to:

- the Bluetooth® module,
- the HX2 mobile device, or
- the HX3 voice mobile device.

The ring scanner is secured to a finger. The Bluetooth module can be worn on the back of the hand or the wrist. The Bluetooth Module, HX2 and HX3 use only one ring scanner or ring imager at a time.

The HX2 and HX3 are usually worn on the arm or at the waist.

The Bluetooth Ring Scanner module is compatible with any Honeywell mobile device that has a Microsoft® Windows® CE 5 or later operating system and Bluetooth client capability.

## ***Integrated Scanners and Integrated Imagers***

Integrated scanners and integrated imagers are built-in to the mobile device and are usually located at the top of the device. The scan engine cannot be accessed by the end-user. The MX8 will beep twice when a configuration bar code is successfully scanned.

Devices with an integrated bar code reader can also:

- scan bar codes using a tethered bar code reader (connected to a cradle or a port on the mobile device).
- pair with and scan bar codes using the wireless Bluetooth Ring Scanner.

## ***Tethered and Wireless Scanners***

Tethered scanners (tethered to a serial port on the device or device's cradle) are configured by scanning the engine-specific bar codes in the scanner manufacturer's programming guide. The manufacturer's guides are usually shipped with the bar code reader.

Wireless Bluetooth scanners are configured by scanning the engine-specific bar codes in the Bluetooth scanner manufacturer's programming guide. The manufacturer's guides are usually shipped with the wireless Bluetooth bar code reader.

## ***Cautions and Warnings***

It is good practice to avoid looking into the beam emitted by any scan beam aperture.

Do not connect the beam aperture to any other device, for example, a beam magnifier.

Class 2 laser scanners use a low power, visible light diode. As with any very bright light source, such as the sun, the user should avoid staring directly into the light beam. Momentary exposure to a Class 2 laser is not known to be harmful.

## Bar Code Readers

Your mobile device may be equipped with any of the following bar code readers:

- 1D Linear Imager, EV-15
- 2D Area Imager, 5300
- 2D Area Imager, 5380
- Short Range Laser Scanner, 955i
- Base Laser Scanner, 955E
- Multi-Range "LORAX" Laser, 1524ER
- Laser Scanner, N43XX
- Laser Scanner, N73XX

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

Programming bar codes for the bar code readers listed above are included in this guide.

The Mobile Device can also use the following bar code readers:

- Tethered hand-held scanners are tethered to a serial port on the Mobile Device and are configured by scanning the engine-specific bar codes in the scanner manufacturer's programming guide. The manufacturer's guides are usually shipped with the bar code reader.
- Wireless hand-held Bluetooth scanners are configured by scanning the engine-specific bar codes in the scanner manufacturer's programming guide. The manufacturer's guides are usually shipped with the bar code reader.
- The body worn Bluetooth Ring Scanner module may be using a 4400 Ring Imager or a 955 Ring Scanner. The module and rings are configured by scanning the bar codes in the *Bluetooth Ring Scanner Programming Guide*.

If your Mobile Device is using a bar code reader that is not included in this guide, please contact [Technical Assistance](#) (page 8-1) for the desired bar code reader availability or upgrade.

## Bar Code Reader and Device Chart

Device	BTRS	HX2	HX3	Marathon	MX3Plus	MX7	MX7 Tecton	MX8	MX9
<b>Reader</b>									
1524 Multi-Range LORAX Laser						X	X		X
4400 Ring Imager	X	X	X						
5300 2D Area Imager							X	X	X
5380 2D Area Imager						X			
955E Base Laser	X	X	X			X	X	X	
955i Short Range Laser					X	X	X	X	X
EV-15 1D Linear Imager						X		X	
Hybrid 2D Imager				X					
N43XX Laser							X	X	
N73XX Laser							X		

## Return to Factory Default Settings

Important: After scanning the engine-specific bar code to return the scanner/imager to factory default settings, the next step is to open the bar code wedge control panel on the mobile device collecting the scanned data. Click the OK button to close the control panel. This action will synchronize all bar code reader formats for your device.

---

## How To Scan a Bar Code

*Note: The function to use an imager like a camera (or for OCR decoding) is not supported. Using a Continuous Scan option, if available, to scan programming bar codes is not supported.*

The linear bar codes in this guide were created using Code 128 symbology. Your Mobile Device has been set up by Honeywell to automatically read / decode Code 128 bar codes.

Using the bar codes contained in this guide, you can change bar code reader system parameters or reset all parameters to their factory default values.

All bar code reader parameters are programmed into and stored by the bar code reader engine.

*Note: If this guide is not in print form, locate the page in this electronic guide that contains the bar code you wish to use. Print the page on white paper using a 600dpi laser printer (or equivalent).*

*Note: Print the page containing the Reset and Cancel bar codes as well as the page containing the A – F and 0 – 9 number bar codes.*

Select the parameter you want to scan. If this guide is in print form, lay it flat on a table or propped up at an angle.

### Scan a Linear Bar Code

Holding the beam aperture approximately 3 – 12 inches away from the bar code, aim the scan aperture toward the selected bar code. Refer to the bar code reader engine type in *Decode Zones* later in this guide for recommended decode ranges.

Press the Scan button. Align the scan beam so that the bar code is centered within the beam. The beam must cross the entire bar code. Move the bar code reader towards or away from the bar code so that the bar code takes up approximately two-thirds the width of the beam.

Refer to the recommended *decode zones* for the installed bar code reader engine if you are having difficulty with this process.

*Note: Do not position the scan aperture exactly perpendicular to the bar code being read. In this position, light can bounce back into the scan aperture, and possibly prevent a successful decode.*

### Scan a 2D Bar Code

To scan a bar code with the imager, point the beam aperture at a bar code and press the Scan button. You will see a bracketed cross-hair strike the bar code.

Holding the beam aperture approximately 3 – 12 inches away from the bar code, aim the imager aperture toward the selected bar code. Press the Scan button and you will see a bracketed cross-hair strike the bar code.

Align the brackets so that the center (or one of the four corners of the bar code's center box) of the bar code is covered by the cross-hair. Refer to bar code decoder engine *Decode Zones* later in this guide for recommended scan ranges for your device.

---

## **Good Read / Bad Read Indicators**

The scan On indicator illuminates (usually red) when the beam is on. Following a bar code scan and “good read” the indicator usually turns green and the mobile device beeps, indicating a successful scan. The mobile device may also play a WAV file while decoding or the mobile device may vibrate.

The laser beam and scan On indicator automatically turn off after a successful or unsuccessful read and the bar code reader is ready to scan again.

*Note: Whether there are beeps in conjunction with scan and decode functions is dependent on the application currently running in the mobile device. Beeps are emitted by the mobile device, not a tethered ring bar code reader.*

*Note: Decrease decode time by disabling unused bar code types. The scan engine can store several different bar code symbologies at the same time. This means the system is able to scan a Code 39 bar code, then an Interleaved 2 of 5 bar code, then a different bar code without requiring a parameter reset.*

Reboot the mobile device to synchronize the new bar code reader engine parameters with the mobile device’s bar code wedge settings.

## **Factors That May Impact Decode Performance**

Successful decode range of a bar code decoder is dependent upon many outside influences including size of the bar code, quality of the bar code printing, material the bar code is printed on, condition of the scan aperture lens (scratches) and angle of the beam aperture relative to the bar code label. Any of these factors may result in having to re-scan the label from a different distance or angle.

### **Bar Code Quality**

Check the bar code for marks or physical damage e.g., ripped label, missing section, correct size for the bar code reader being used, etc.

In general, the bigger the bar code the further the distance from which it can be read. If the bar code is smaller than the specified size for the bar code reader being used, the distance, in almost all cases, will shrink.

Large bar codes can be read at the maximum distance. Hold the bar code reader closer to small bar codes (or with bars that are very close together).

*Note: Do not position the bar code reader exactly perpendicular to the bar code being scanned. In this position, light can bounce back into the scan aperture, and possibly prevent a successful decode.*

### **Bar Code Source**

Using a graphics program to clip/copy a bar code from an online file (e.g., Adobe, Word) will copy the bar code at your monitor’s dot per inch setting, a level too low for successful bar code decoding.

Copy a Bar Code -- Use your browser’s right-click menu to download an individual bar code using the Save Picture As option. Save the picture to a location on your computer’s hard drive. The individual bar code can be added, as a file, to any delivery vehicle e.g., email, Word document.

### **Bar Code Symbology**

Bar codes such as UPC codes and Code 128 are more complex than Code 39 and Interleaved 2 of 5. When attempting to get the maximum read distance possible, particularly with reflective labels, use Code 39. The use of Code 128 or other more complex symbologies will almost always result in a reduction in maximum read distance. Honeywell will not support bar code reader maximum distances (from Decode Zones) when symbologies other than Code 39 are used.

### **Lens Damage**

A scratched scan beam aperture can impact read rates and distances. Beam apertures should be inspected frequently, particularly if bar code reading quality or distances get worse over time.

### **Ambient Lighting**

High ambient conditions, particularly outdoor environments, will produce enough light to somewhat “blind” the bar code reader. This will result in shorter read distances.

---

## **Temperature**

While small deviations in room temperature will have no impact on bar code reader performance, severe conditions like those found in freezers will have a negative impact on both the distance bar code readers can read and the speed the decode is acquired.

Some bar code reader engines contain protection circuitry that shuts the bar code reader down in temperatures that exceed the recommended operating temperature.

## **Bar Code Help**

- Whether there are beeps in conjunction with scan and decode functions is dependent on the application currently running in the Mobile Device.
- Decrease decode time by disabling unused bar code types. The bar code reader engine can store several different bar code symbologies at the same time. This means the Mobile Device is able to decode a Code 39 bar code, then an Interleaved 2 of 5 bar code, then a different bar code without requiring a parameter reset.
- The Mobile Device Scan Wedge (or Data Collection Wedge) panel parameters are applied to the data resulting from successful bar code scans sent to the Mobile Device for processing. The Control Panel does not affect or change the programming bar code parameter settings contained in this guide.
- After reading the Reset All (or equivalent) bar code with the Mobile Device's integrated bar code reader engine or tethered ring scanner, the next step is to open the Scan (or Data Collection Wedge) panel, click the OK button and then close the panel. This action will synchronize all bar code reader formats.

## **Printing Bar Codes**

### **Problem**

Bar codes on the printed page are too compact to be read, especially with a long range scanner.

### **Solution - Printing Adobe Acrobat PDF File Pages**

*When printing pages from an Adobe Acrobat PDF file*, there is a difference between laser printer types and how they handle some Adobe Acrobat print functions – specifically, the “shrink to fit” option on the Print Options screen.

Before clicking Print, make sure the “Shrink oversized pages to paper size” checkbox is unchecked. If the bar code is still too small to be read by the bar code reader engine, run the printed page through the laser printer again using the laser printer's Zoom feature until the bar code is large enough to scan satisfactorily.

*When printing pages from an on-line Web page*, run the printed page through a laser copier using the laser copier's Zoom feature until the bar code is large enough to decode satisfactorily.

### **Solution - Printing from a Browser Page**

*Print a Page*

Use the Print button on the Taskbar. Bar codes must be printed at 600 dots per inch (dpi) before they can be successfully scanned with a bar code reader.

## **Miscellaneous Programmable Bar Codes**

*Note: Ring decoding devices do not have the ability to emit a good read or bad read sound.*

### **Beep After Good Decode**

Audible scan progress indicators are generated by the bar code reader driver on Honeywell mobile devices, not the bar code reader engine. Use Windows Control Panel options to set up the mobile device audible indicators.

### **Beeper Frequency Adjustment**

Audible scan progress indicators are generated by the bar code reader driver on Honeywell mobile devices, not the bar code decoder engine. Use Windows Control Panel options to set up the mobile device audible indicators.

---

### **Beep on <BEL>**

This parameter is enabled on the Bluetooth Ring Scanner Module. There is no corresponding ring scanner programming bar code required.

This parameter is disabled/inactive on all other Honeywell mobile devices.

### **Beeper Tone / Beeper Volume**

Audible scan progress indicators are generated by the bar code reader driver on Honeywell mobile devices, not the bar code reader engine. Use Windows Control Panel options to set up the mobile device audible indicators.

### **Event Reporting**

Honeywell mobile devices aren't designed to process events triggered by a bar code reader engine. Events are processed by the operating system resident on the mobile device. Use Windows Control Panel options to set up the mobile device event reporting parameters.

### **LED Mode**

This parameter is disabled/inactive as the scan LEDs are controlled by the bar code reader driver, not the bar code reader engine.

### **Return to Factory Default Settings**

Important: After scanning the engine-specific bar code to return the scanner/imager to factory default settings, the next step is to open the bar code wedge panel on the mobile device collecting the scanned data. Click the OK button to close the panel. This action will synchronize all bar code reader formats for your device.

*Note: When the MX8 (CE 5 only) has an integrated bar code reader, the MX8 will be pre-loaded with **either** Scan Wedge **or** Data Collection Wedge, not both.*

## **Cleaning the Beam Aperture**

*Note: New devices -- Remove the shipping film from the beam aperture before first use.*

Keep fingers and rough, sharp or abrasive objects away from the beam aperture.

If the aperture becomes soiled or smudged, clean only with a standard household cleaner such as Windex® without vinegar or use Isopropyl Alcohol. Dampen the cloth with the cleaner; do not apply liquids directly to the aperture.

Do not use paper towels or harsh-chemical-based cleaning fluids since they may result in damage to the aperture surface.

Use a clean, damp, lint-free cloth. Do not scrub optical surfaces.

If possible, clean only those areas which are soiled.

Lint/particulates can be removed with clean, filtered canned air.

## EV-15 Imager

### Introduction

Integrated Imager Engine	MX7	MX8
--------------------------	-----	-----

This section's explanations and instructions are directed toward devices with an integrated EV-15 Imager. Do not use the bar codes in this section for other types of imagers or scan engines.

Configuration bar codes in this section are designed for the EV-15 scan engine. Determining the type of scan engine in your decoding device is an important requirement before using it to scan a configuration bar code. If you are unsure, contact your System Administrator for assistance with your mobile device.

Scan engine manufacturers may offer more bar codes and options than are contained in this section. Please note that the bar codes in this section are only those supported by Honeywell on the mobile devices listed above.

[Technical Assistance](#) (page 8-1) is available if you need help when using the bar codes in this section.

An asterisk (\*) next to an option indicates the default setting. The MX8 will beep twice when a configuration bar code is successfully scanned.

### Reset to Factory Defaults

After scanning the engine-specific bar code to return the imager to factory default settings, the next step is to open the bar code wedge panel on the mobile device collecting the scanned data. Click the OK button to close the panel. This action will synchronize all bar code decoder formats for your device.

### Print a Page

Use the Print button on the browser Taskbar. These bar codes must be printed at 600 dots per inch (dpi) before they can be successfully scanned by a bar code reader.

### Reset to Factory Defaults using the LXEReset Bar Code

The LXEReset bar code should only be scanned by mobile devices running the Data Collection Wedge software.

This bar code must not be scanned by devices running the Bar Code Scan Wedge software.

The following function-specific bar code is only used when it is necessary to return the decoder engine back to factory default values.

When the scan is successful, the mobile device emits a double beep and the Scan On indicator is amber. The decoding engine is not available for further bar code scanning until the Scan On indicator turns off. Scanning this bar code does not affect the mobile device's operating system, wireless client or installed software (e.g., AppLock) settings.

## ***Pre-Configured Default Values***

<b>Parameter</b>	<b>Default Value</b>
Reset Factory Defaults	All Defaults
Disable all Symbologies	Enable
Disable all Extended Reading Ranges	Enable
<b>Configuration Modes</b>	
Configuration	Enabled

### **Frequently Used Bar Codes**

*Note: Honeywell does not support Micro PDF or PDF 417 using the integrated EV-15 scanner.*

#### **Reset to Factory Defaults Bar Code**

Use the Reset Factory Defaults parameter to reset all scanner parameters to their default values. Scanning this bar code does not affect the mobile device's operating system, wireless or installed software (e.g., RFTerm) settings.

Reset to Factory Defaults

See [Pre-Configured Default Values](#) (page 2-2) for an alphabetical listing of all default values.

Important: After scanning the engine-specific bar code to return the scanner/imager to factory default settings, the next step is to open the bar code wedge panel on the mobile device collecting the scanned data. Click the OK button to close the panel. This action will synchronize all scanner formats for your device.

---

## ***EV-15 Configuration Modes***

Select an option by scanning one of the bar codes in this section.

French CIP - checked but not transmitted

Italian CPI / Code 32 - checked and transmitted

---

Italian CPI / Code 32 - checked but not transmitted

**Bar Code Length**

*Default = Any length*

\* Any length

Minimum length : 6

---

**Reading Range / Tolerance**

*Default = Extended range*

*Default = High tolerance*

Normal range

\* Extended range

Medium tolerance

\* High tolerance

Low tolerance

---

## **Code 93 / Code 93i**

*Default = Disabled*

*Default = Custom symbology identifier B6*

*Default = Any bar code length*

\* Disable

Enable

\* Custom symbology identifier B6

\* Any bar code length

Minimum length - 6

---

## **Code 128 / EAN 128**

*Default = Code 128 Enabled / EAN 128 Enabled*

\* Code 128 Enable

Code 128 Disable

\* EAN 128 Enable

EAN 128 Disable

### **Custom Symbology Identifier**

*Default = Code 128 : B3*

*Default = EAN 128 : C9*

\* Custom symbology identifier - Code 128 - default  
"B3"

\* Custom symbology identifier - EAN 128 - default  
"C9"

---

**EAN 128 Identifier**

*Default = Include C1 identifier*

\* Include ]C1 identifier

Remove ]C1 identifier

**CIP 128 French Pharmaceutical Code**

*Default = Disable*

\* Disable

Enable

**FNC1 Separator Character**

\* FNC1 separator character (EAN 128 norms) -  
<GS> (1Dh)

---

**Bar Code Length**

*Default = Any length*

\* Any length

Minimum length = 6

**Reading Range**

*Default = Extended reading range*

\* Extended reading range

Normal reading range

---

**Tolerance**

*Default = High tolerance*

\* High tolerance

Medium tolerance

Low tolerance

---

**ISBT 128**

*Default = Disable*

\* Disable

Enable

**ISBT 128 Transmit**

*Default = Single codes only*

\* Single codes only

Concatenated codes only

Single codes / concatenated codes

---

**ISBT 128 Concatenate**

*Default = Authorized ISBT 128 code pairs only*

\* Authorized ISBT 128 code pairs only

All ISBT 128 code pairs

**GTIN Processing for EAN 128**

*Default = Disable*

\* Disable

Enable

---

## **Interleaved 2 of 5**

*Default = Disabled*

*Default = Custom symbology identifier B2*

\* Disable

Enable

\* Custom symbology identifier B2

## **Reading Range**

*Default = Extended reading range*

\* Extended reading range

Normal reading range

---

**Check Digit**

*Default = Disable*

\* Disable

Mod 10 – checked and transmitted

Mod 10 – checked but not transmitted

French CIP HR – checked and transmitted

French CIP HR – checked but not transmitted

---

**Bar Code Length**

*Note: l2of5 is always an even number of characters.*

*Default = Bar code minimum length = 6*

\* Bar code minimum length = 6

**Compose Minimum Length**

*Note: Range : 4 - 50*

*Default = Minimum length = 4*

\* Minimum Length = 4

Minimum Length = 50

---

## **Matrix 2 of 5**

*Default = Disabled*

*Default = Custom symbology identifier B4*

*Default = Minimum bar code length : 6*

\* Disable

Enable

\* Custom symbology identifier B4

Any bar code length

\* Minimum bar code length = 6

---

## **MSI Code**

*Default = Disabled*

*Default = Custom symbology identifier B8*

\* Disable

Enable

\* Custom symbology identifier B8

---

### **Check Digit**

*Default = Mod 10 checked and transmitted*

\* Mod 10 checked and transmitted

Mod 10 checked but not transmitted

Double Mod 10 checked and transmitted

Double Mod 10 checked but not transmitted

### **Bar Code Length**

*Default = Minimum bar code length = 6*

\* Minimum bar code length = 6

Any bar code length

---

## **Plessey Code**

*Default Value : Disable*

*Custom symbology identifier C2*

\* Disable

Enable

\* Custom symbology identifier C2

## **Check Digit**

*Default = Check digit not transmitted*

\* Check digit not transmitted

Check digit transmitted

---

**Bar Code Length**

*Default = Minimum bar code length = 6*

Any length

\* Minimum bar code length = 6

---

## **GS1 DataBar (RSS) Code**

*Default = Disable*

*Default = Custom symbology identifier C3*

Enable

\* Disable

\* Custom symbology identifier C3

## **GS1 DataBar Limited (RSS Limited)**

*Default = Disable*

*Default = Custom symbology identifier C4*

Enable

\* Disable

\* Custom symbology identifier C4

---

**GS1 DataBar Expanded (RSS expanded)**

*Default = Disable*

*Default = Custom symbology identifier C5*

Enable

\* Disable

\* Custom symbology identifier C5

---

## **Standard 2 of 5 Code**

*Default = Disable*

*Default = Custom symbology identifier B5*

\* Disable

Enable

\* Custom symbology identifier B5

### **Format**

*Default = Identicon*

\* Identicon (6 start/stop bars)

Computer Identics (4 stop/start bars)

---

**Check Digit Mod 10**

*Default = Disable*

\* Disable

Checked and transmitted

Checked but not transmitted

**Bar Code Length**

*Default = Minimum bar code length = 6*

\* Minimum bar code length = 6

Any bar code length

---

## **Telepen**

*Default = Disabled*

*Default = Custom symbology identifier C6*

*Default = Format ASCII*

*Default = Any length bar code*

\* Disable

Enable

\* Custom symbology identifier C6

\* Format – ASCII

Format – numeric

\* Any bar code length

---

**UPC / EAN**

**UPC-A**

*Default = Enable UPC-A*

\* Enable UPC-A

Disable UPC-A

**UPC-E**

*Default = Enable UPC-E*

\* Enable UPC-E

Disable UPC-E

**EAN-8**

*Default = Enable EAN-8*

\* Enable EAN-8

Disable EAN-8

---

**EAN-13**

*Default = Enable EAN-13*

\* Enable EAN-13

Disable EAN-13

**UPC-E1**

*Default = Disable UPC-E1*

Enable UPC-E1

\* Disable UPC-E1

---

### *Custom Symbology Identifier*

\* UPC-A - default "A0"

\* UPC-E - default "E0"

\* EAN-8 - default "FF"

\* EAN-13 - default "F"

---

**Add-on Digits**

*Default = Not required but transmitted if read*

*Default = Add-on 2 disabled*

*Default = Add-on 5 disabled*

*Default = Security level 10*

\* Not required but transmitted if read

Required and transmitted

\* Add-on 2 Disabled

Add-on 2 Enabled

\* Add-on 5 Disabled

Add-on 5 Enabled

---

\* Security level = 10

**Check Digit**

*Default = UPC-A transmitted*

*Default = UPC-E transmitted*

*Default = EAN-8 transmitted*

*Default = EAN-13 transmitted*

\* UPC-A – transmitted

UPC-A – not transmitted

\* UPC-E – transmitted

UPC-E – not transmitted

\* EAN-8 – transmitted

---

**Reading Range**

*Default = Extended*

\* Extended

Normal

## 5300 2D Imager

### Introduction

<b>Integrated Imager Engine</b>	MX7 Tecton	MX8	MX9
---------------------------------	------------	-----	-----

This section's explanations and instructions are directed toward devices with an integrated (Hand Held Products) HHP 5300 2D Imager. Do not use these decoding engine instructions for any other imager type or scan engine.

An asterisk (\*) next to an option indicates the default setting.

This section is directed toward a mobile device with an integrated (Hand Held Products) HHP 5300 2D imager and contains instructions that can be used to modify the HHP 5300 2D Imager scan engine configuration parameters, only.

### MX8 CE 5

The configuration parameters are stored in the SCANCONFIG.INI file on the Mobile Device in the \System folder.

The value shown for each parameter in the Sample SCANCONFIG.INI file is the pre-configured default value.

After configuration changes are complete, save the modified SCANCONFIG.INI file and **initiate a reboot** in order for the new settings to take effect.

*Note: When the MX8 (CE 5 only) has an integrated bar code reader, the MX8 is pre-loaded with **either** Scan Wedge **or** Data Collection Wedge, not both.*

### Mobile Device with a Windows Mobile operating system

Options set (in the past) with SCANCONFIG.INI file for a device with an installed HHP 5300 2D non-decoded imager, have been replaced by the **Advanced properties dialogs** in the **Data Collection Wedge (DCWedge)** panel on the mobile device.

### Data Collection Wedge Panel

Bar code enable/disable settings and Min/Max settings may appear to be duplicated in the SCANCONFIG.INI file and the Mobile Device operating system Data Collection Wedge Panel.

Parameters set in the SCANCONFIG.INI file establish initial imager engine scan settings.

Then the settings in the Mobile Device Data Collection Wedge Panel manipulates the results of successful imager bar code scans.

When the Mobile Device restarts, the imager parameter settings set in the SCANCONFIG.INI are applied, then the parameter settings in the Data Collection Wedge Panel are applied.

Use the HHP Properties button on the Data Options tab and the Advanced button available on many of the individual Symbology Settings screen to configure the (Hand Held Products) HHP Imager. There are no configuration bar codes for this imager.

### Reset to Factory Defaults using the LXEReset Bar Code

The LXEReset bar code should only be scanned by mobile devices running Data Collection Wedge software.

This bar code must not be scanned by devices running Bar Code Scan Wedge software.

---

The following function-specific bar code is only used when it is necessary to return the decoder engine back to factory default values.

When the scan is successful, the mobile device emits a double beep and the Scan On indicator is amber. The decoding engine is not available for further bar code scanning until the Scan On indicator turns off. Scanning this bar code does not affect the mobile device's operating system, wireless client or installed software (e.g., AppLock) settings.

## **Decoder**

*Note: These settings have no effect on laser scanner-equipped units or EV-15 imager equipped units.*

### **DecodeMode**

Default	1
Valid	1 = Normal mode 2 = Aggressive Linear Decode (ALD) 4 = Quick Omni

In Normal mode the imager will decode both linear and 2-D symbologies.

In Aggressive Linear Decode mode the imager will only read linear symbologies in this mode, but decoding these is faster and more accurate than Normal Mode.

In Quick Omni mode the imager searches for a bar code in a reduced field located around the center of the image. Decoding is faster in this mode, but the user must center the aiming line over the bar code to be read. Both linear and 2-D symbologies can be read in this mode.

### **LinearRange**

Default	3
Valid	1 - 6

1 specifies that the linear range that is searched for a readable label is a tight vertical range near the aimer.

6 specifies that the entire height of the image is to be searched.

### **LeaveLightsOn**

Default	0
Valid	0 = Off, 1 = On

Specifies if the imager's lights and aimer should be left on during the entire decode process.

If Off, the lights are turned on only during image capture, then turned off while the imager attempts to process and decode the bar code.

If On, the aimer and lights remain turned on during the entire process.

In Aggressive Linear Decode mode, set this parameter to 1 to improve the aimer visibility.

[See DecodeMode](#) on page 3-2

---

## ***AimTimer***

Duration of the imager aim beam in 0.1 second increments.

Default                    0  
Valid                     0 = 50 (0 – 5 seconds)

If a value greater than 50 is entered, the aim duration is set to the maximum time of 5 seconds.

## ***Centering***

The centering feature is used to allow the user to accurately scan a selected bar code among a group of bar codes that are located closely together. When centering is turned on, the imager will only decode bar codes that intersect the centering window defined by the user. The centering window must intersect the center of the bar code.

The default centering settings define a 60 pixel square area in the center of the imager's field of view.

Default centering settings and allowable minimum and maximum settings are listed below.

Centering                Enable  
Default                  0  
Valid                    1 Enable  
                              0 Disable

Enable or disable Centering feature. When disabled, the following values are ignored.

<b>Position</b>	<b>Default</b>	<b>Minimum</b>	<b>Maximum</b>
CenteringTop	120	0	239
CenteringBottom	360	240	479
CenteringLeft	188	0	319
CenteringRight	564	320	639

---

## Symbologies

For each symbology, the first parameter (parameter1) determines if the symbology is enabled (1 = enabled).

The remaining parameters through parameter **n** have various meanings for each symbology.

Minimum parameters with a range indicate the minimum value can begin at any number after the initial minimum number e.g., if a parameter has a minimum length range between 0 and 200, the minimum range can be set to any number between the minimum (0) and the maximum (200).

*Note: Altering these settings has no effect on a mobile device equipped with a laser scanner.*

### Aztec

Syntax           Aztec=p1,p2,p3

Example          Aztec=1,1,3750

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode Aztec bar code
2	1	1 - 3750	minimum length of bar code to decode
3	3750	1 - 3750	maximum length of bar code to decode

### Codabar

Syntax           Codabar=p1,p2,p3,p4,p5,p6

Example          Codabar=1,0,0,0,4,60

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode Codabar bar code
2	0	1 enable 0 disable	Transmit start/stop characters
3	0	1 enable 0 disable	Decode only bar codes with check characters
4	0	1 enable 0 disable	Transmit check characters
5	4	2 - 60	Minimum length to decode
6	60	2 - 60	Maximum length to decode

---

## **Codablock**

Syntax           Codablock=p1,p2,p3

Example           Codablock=0,0,2048

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Codablock bar code
2	0	0 - 2048	Minimum length of bar code to decode
3	2048	0 - 2048	Maximum length of bar code to decode

## **Code 11**

Syntax           Code11=p1,p2,p3,p4

Example           Code11=0,1,4,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Code 11 bar code
2	1	1 enable 0 disable	Decode only bar codes with two check digits
3	4	1 - 80	Minimum length to decode
4	80	1 - 80	Maximum length to decode

## **Code 16K**

Syntax           Code16K=p1,p2,p3

Example           Code16K=0,1,160

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Code 16K bar code
2	1	1 - 160	Minimum length to decode
3	160	1 - 160	Maximum length to decode

---

## Code 32

Syntax Code32=p1

Example Code32=1

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode Code32 bar code

## Code 39

Syntax Code39=p1,p2,p3,p4,p5,p6,p7,p8

Example Code39=1,0,0,0,0,0,0,48

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode Code 39 bar code
2	0	1 enable 0 disable	Transmit start/stop characters
3	0	1 enable 0 disable	Decode only bar codes with check characters
4	0	1 enable 0 disable	Transmit check character
5	0	1 enable 0 disable	Full ASCII interpretation
6	0	0 disable	Append and buffer codes that start with a space
7	0	0 - 48	Minimum length to decode
8	48	0 - 48	Maximum length to decode

## Code 49

Syntax Code49=p1,p2,p3

Example Code49=1,1,81

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode Code 49 bar code
2	1	1 - 81	Minimum length to decode
3	81	1 - 81	Maximum length to decode

---

### **Code 93**

Syntax Code93=p1,p2,p3

Example Code93=1,0,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode Code 93 bar code
2	0	0 - 80	Minimum length to decode
3	80	1 - 80	Maximum length to decode

### **Code 128**

Syntax Code128=p1,p2,p3

Example Code128=1,0,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode Code 128 bar code
2	0	0 - 80	Minimum length to decode
3	80	0 - 80	Maximum length to decode

### **Coupon Code**

Syntax Coupon=p1

Example Coupon=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Coupon Code bar code

---

## ***EAN-UCC Composite***

Syntax            Composite=p1,p2,p3

Example            Composite=0,1,300

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode EAN-UCC Composite bar code
2	1	1 - 300	Minimum length to decode
3	300	1 - 300	Maximum length to decode

## ***Data Matrix***

Data Matrix – 2D bar code uses a unique square module perimeter pattern that helps the bar code reader determine the cell locations.

Syntax            DataMatrix=p1,p2,p3

Example            DataMatrix=1,1,1500

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode Data Matrix bar code
2	1	1 - 1500	Minimum length to decode
3	1500	1 - 1500	Maximum length to decode

## ***EAN 8***

Syntax            EAN8=p1,p2,p3,p4,p5,p6

Example            EAN8=1,1,0,0,0,1

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode EAN 8 bar code
2	1	1 enable 0 disable	Transmit check character
3	0	1 enable 0 disable	Transmit 2 digit addenda
4	0	1 enable 0 disable	Transmit 5 digit addenda
5	0	1 enable 0 disable	Only decode bar codes with 2 or 5 digit addenda
6	1	1 enable 0 disable	Insert space between code and addenda

---

## **EAN 128**

Syntax EAN128=p1,p2,p3

Example EAN128=1,0,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode EAN 128 bar code
2	0	0 - 80	Minimum length to decode
3	80	0 - 80	Maximum length to decode

## **EAN 13**

*Note: A UPCA decoding algorithm will also decode EAN 13 labels. For correct operation, either disable the [UPCA](#) (page 3-17) symbology when using EAN 13 labels or configure the UPCA settings to match the EAN 13 settings.*

Syntax EAN13=p1,p2,p3,p4,p5,p6

Example EAN13=1,1,0,0,0,1

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode EAN 13 bar code
2	1	1 enable 0 disable	Transmit check character
3	0	1 enable 0 disable	Transmit 2 digit addenda
4	0	1 enable 0 disable	Transmit 5 digit addenda
5	0	1 enable 0 disable	Only decode bar codes with 2 or 5 digit addenda
6	1	1 enable 0 disable	Insert space between code and addenda

## **GenCode 128**

Syntax GenCode128=p1,p2,p3

Example GenCode128=1,0,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode GenCode 128 bar code
2	0	0 - 80	Minimum length to decode
3	80	0 - 80	Maximum length to decode

---

## ***IATA 2 of 5***

Syntax IATA25=p1,p2,p3

Example IATA25=0,4,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode IATA 2 of 5 bar code
2	4	4 - 80	Minimum length to decode
3	80	4 - 80	Maximum length to decode

## ***ID Tag***

Syntax IDTag=p1

Example IDTag=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode ID Tag bar code

## ***Interleaved 2 of 5***

Syntax Int25=p1,p2,p3,p4,p5

Example Int25=1,0,0,4,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode Interleaved 2 of 5 bar code
2	0	1 enable 0 disable	Only decode bar codes w/ check digit
3	0	1 enable 0 disable	Transmit check digit
4	4	4 - 80	Minimum length to decode
5	80	4 - 80	Maximum length to decode

---

### **ISBT-1**

Syntax ISBT=p1

Example ISBT=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode ISBT bar code

### **Matrix 2 of 5**

Syntax Matrix25=p1,p2,p3

Example Matrix25=0,4,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Strt25 bar code
2	4	4 - 80	Minimum length to decode
3	80	4 - 80	Maximum length to decode

### **Maxicode**

Maxi Code – 2D matrix symbology containing hexagon modules in a 1” square area.

Syntax Maxicode=p1,p2,p3, p4

Example Maxicode=1,0,1,150

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode Maxicode bar code
2	0	Not Applicable	CarrierMsgOnly - Unused
3	1	1 - 150	Minimum length to decode
4	150	1 - 150	Maximum length to decode

---

## **Mesa**

Syntax Mesa=p1,p2,p3,p4,p5,p6,p

Example Mesa=0,0,0,0,0,0,0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Mesa bar code
2	0	1 enable 0 disable	Decode UPCA Mesa
3	0	1 enable 0 disable	Decode EAN13 Mesa
4	0	1 enable 0 disable	Decode Code 39 Mesa bar code
5	0	1 enable 0 disable	Decode Code 128 Mesa
6	0	1 enable 0 disable	Decode Interleaved 2 of 5 Mesa
7	0	1 enable 0 disable	Decode Code 93 Mesa

## **MicroPDF417**

Syntax MicroPDF=p1,p2,p3

Example MicroPDF=1,1,366

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode MicroPDF bar code
2	1	1 - 366	Minimum length to decode
3	366	1 - 366	Maximum length to decode

## **MSI Plessey**

Syntax MSI=p1,p2,p3,p4

Example MSI=0,4,48,0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode MSI bar code
2	4	4 – 48	Minimum length to decode
3	48	4 – 48	Maximum length to decode
4	0	1 enable 0 disable	Transmit check character

---

## **Plessey**

Syntax Plessey=p1,p2,p3

Example Plessey=0,4,48

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode MSI bar code
2	4	4 – 48	Minimum length to decode
3	48	4 – 48	Maximum length to decode

## **OCR**

Syntax OCR=p1,p2,p3,p4,p5,p6,p7

Example OCR=0,2,ddddddd,,,,0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode OCR bar code
2	2	0 OCR_DISABLED 1 OCR_A 2 OCR_B 3 OCR_MONEY	Font Selection
3	ddddddd	See Note 1	Template selection(null terminated string)
4	null	See Note 1	Null-terminated string defines the set of characters in group G
5	null	See Note 1	Null-terminated string defines the set of characters in group H

Note 1: The length of the template must match the length of the OCR string to be read. P3 parameter template selections are:

- a - alphanumeric character (digit or letter)
- c - check character
- d - digits from 0 to 9
- e - any character
- g - any character specified in group G
- h - any character specified in group H
- l - alphabetic letter
- r - delimits a row
- t - delimits multiple templates

All characters are transmitted as is, except for the selected template.

Pn	Default	Valid	Description
6	null	Modulo 10 "0123456789" Modulo 36 "0123456789ABC DEFGHIJKLMNOPQRSTUVWXYZ"	Null-terminated string defines legal characters for checksum calculation.

Calculate checksum characters as follows:

*Modulo 10*

1. Add the characters in the string (not including the checksum character).
2. Subtract 10 from the sum obtained above. Continue subtracting 10 until the remainder is less than 10.

The remainder obtained above is the checksum. Enter this digit in the checksum position.

*Modulo 36*

1. Add the characters in the string (not including the checksum character).
2. Subtract 36 from the sum obtained above. Continue subtracting 36 until the remainder is less than 36.
3. Subtract the remainder obtained above from 36. The value obtained is the checksum. Enter this character in the checksum position.

Digit / Alpha values are defined as follows for modulo 36:

0 – 9 = 0 – 9; A = 10, B = 11, ... Z = 25

Direction (Orientation) – this parameter is ignored

Pn	Default	Valid	Description
7	0	0 left to right 1 top to bottom 2 right to left 3 bottom to top	Orientation. Decoder reads OCR fonts in any orientation, but setting this parameter correctly can increase decoding speed.

**Example:**

To read a combination of 6 alpha and numeric characters use the following template:

aaaaaa

**Example:**

To read the same string with a modulo 10 check digit in the 7<sup>th</sup> character position, use the following template:

aaaaaac

Then enter 0123456789 for parameter 6.

**Example:**

To read either a string of 6 alphabetic letters OR a string of 8 numeric digits, use this template:

l11111tddddddd

Note the use of the "t" to separate the first template from the second.

**Example:**

To read multiple rows of OCR data as shown below:

123450  
ABCDEF

Either of the following templates could be used:

dddddrlllll or aaaaaaraaaaa

Note the use of the "r" to define the position of the second row.

---

## **PDF417**

Syntax PDF417=p1,p2,p3

Example PDF417=1,1,2750

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode PDF417 bar code
2	1	1 - 2750	Minimum length to decode
3	2750	1 - 2750	Maximum length to decode

## **QR Code**

Syntax QR=p1,p2,p3

Example QR=1,1,3500

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode QR bar code
2	1	1 - 3500	Minimum length to decode
3	3500	1 - 3500	Maximum length to decode

## **RSS Code**

Syntax RSS=p1,p2,p3

Example RSS=0,4,74

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode RSS bar code
2	4	4 - 74	Minimum length to decode
3	74	4 - 74	Maximum length to decode

*Note: RSS Code name change effective January 2010 to GS1 DataBar.*

---

## ***Straight 2 of 5***

Syntax Strt25=p1,p2,p3

Example Strt25=1,4,48

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode Strt25 bar code
2	4	4 - 48	Minimum length to decode
3	48	4 - 48	Maximum length to decode

## ***Telepen***

Syntax Telepen=p1,p2,p3

Example Telepen=0,1,60,0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Telepen bar code
2	1	1 – 60	Minimum length to decode
3	60	1 – 60	Maximum length to decode
4	0	0=AIM, 1=Original	Select AIM or Original Telepen

## ***TLC***

Syntax TLC=p1

Example TLC=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode TLC bar code

---

## ***Trioptic***

Syntax      Trioptic=p1

Example      Trioptic=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Trioptic bar code

## ***UPCA***

Syntax      UPCA=p1,p2,p3,p4,p5,p6,p7

Example      UPCA=1,1,1,0,0,0,1

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	1	1 enable 0 disable	Decode UPCA bar code
2	1	1 enable 0 disable	Transmit check digit
3	1	1 enable 0 disable	Transmit number system
4	0	1 enable 0 disable	Transmit 2-digit addenda
5	0	1 enable 0 disable	Transmit 5-digit addenda
6	0	1 enable 0 disable	Only decode bar codes with 2- or 5- digit addenda
7	1	1 enable 0 disable	Insert space between code and addenda

*Note: An EAN 13 decoding algorithm will also decode UPCA labels. For correct operation, either disable the EAN 13 symbology when using UPCA labels or configure the EAN 13 settings to match the UPCA settings.*

---

## UPCE0

Syntax UPCE0=p1,p2,p3,p4,p5,p6,p7,p8

Example UPCE0=1,1,1,0,0,0,0,1

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode UPCE0 bar code
2	1	1 enable 0 disable	Transmit check digit
3	1	1 enable 0 disable	Transmit number system
4	0	1 enable 0 disable	Expand version E to 12-digit UPCA format
5	0	1 enable 0 disable	Transmit 2-digit addenda
6	0	1 enable 0 disable	Transmit 5-digit addenda
7	0	1 enable 0 disable	Only decode bar codes with 2- or 5- digit addenda
8	1	1 enable 0 disable	Insert space between code and addenda

*Note: UPCE0 and UPCE1 must be configured identically for correct operation.*

## UPCE1

Syntax UPCE1=p1,p2,p3,p4,p5,p6,p7,p8

Example UPCE1=1,1,1,0,0,0,0,1

Pn	Default	Valid	Description
1	1	1 enable 0 disable	Decode UPCE1 bar code
2	1	1 enable 0 disable	Transmit check digit
3	1	1 enable 0 disable	Transmit number system
4	0	1 enable 0 disable	Expand version E to 12-digit UPCA format
5	0	1 enable 0 disable	Transmit 2-digit addenda
6	0	1 enable 0 disable	Transmit 5-digit addenda
7	0	1 enable 0 disable	Only decode bar codes with 2- or 5- digit addenda
8	1	1 enable 0 disable	Insert space between code and addenda

*Note: UPCE0 and UPCE1 must be configured identically for correct operation.*

---

## Postal Codes

### **Auspost**

Note: Auspost = Australian 4 State Code

Syntax            Auspost=p1

Example           Auspost=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Auspost bar code

### **BPO**

BPO = British Post Office 4 State Code

Syntax            BPO=p1

Example           BPO=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode BPO bar code

### **Canpost**

Canpost = Canadian 4 State Code

Syntax            Canpost=p1

Example           Canpost=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Canpost bar code

---

## ***China Post***

Syntax            ChinaPost=p1,p2,p3

Example           ChinaPost=0,4,80

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode China Post bar code
2	4	4 - 80	Minimum length to decode
3	80	4 - 80	Maximum length to decode

## ***DutchPost***

Dutchpost = Dutch Postal Code

Syntax            DutchPost=p1

Example           DutchPost=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Dutchpost bar code

## ***JapanPost***

JapanPost = Japanese Postal Service Code

Syntax            JapanPost=p1

Example           JapanPost=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode JapanPost bar code

---

## ***Korean Post***

Syntax            KoreanPost=p1,p2,p3

Example           KoreanPost=0,4,48

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Korean Post bar code
2	4	4 - 48	Minimum length to decode
3	48	4 - 48	Maximum length to decode

## ***Planet***

The Postal Alpha Numeric Encoding Technique (PLANET)

Syntax            Planet=p1,p2

Example           Planet=0,0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Planet bar code
2	0	1 enable 0 disable	Transmit check digit

## ***Posi Code***

Syntax            Posi=p1,p2,p3

Example           Posi=0,4,48,2

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Posi Code bar code
2	4	4 – 48	Minimum length to decode
3	48	4 – 48	Maximum length to decode
4	2	0=none 1=A 2=B	Limited setting

---

## ***Postnet***

Postnet = US Postal Service Postnet Code

Syntax            Postnet=p1,p2

Example           Postnet=0,0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Postnet bar code
2	0	1 enable 0 disable	Transmit check digit

## ***Usps4cb***

USPS height-modulated bar code designed for use in high speed, automated, mail sorting machines that allow both Planet and Postnet bar code information to be combined into a single bar code to track mailings, request address-quality service.

Syntax            Usps4cb=p1

Example           Usps4cb=0

<b>Pn</b>	<b>Default</b>	<b>Valid</b>	<b>Description</b>
1	0	1 enable 0 disable	Decode Usps4cb Code bar code

---

## Sample SCANCONFIG.INI File

The SCANCONFIG.INI file used for 5300 2D imager configuration is located in the System folder on the mobile device and has the format shown below.

Do not insert spaces in the settings entries. For example:

DecodeMode=1	Correct
DecodeMode = 1	Incorrect

*Note: Default values are shown in the SCANCONFIG.INI file below.*

### [Decoder]

DecodeMode=1  
LinearRange=3  
LeaveLightsOn=0  
AimTimer=0

### [Centering]

CenteringEnable=0  
CenteringTop=120  
CenteringBottom=360  
CenteringLeft=188  
CenteringRight=564

### [Symbologies]

Aztec=1,1,3750  
Mesa=0,0,0,0,0,0,0  
Codabar=1,0,0,0,4,60  
Code11=0,1,4,80  
Code128=1,0,80  
Code39=1,0,0,0,0,0,0,48

## 5380SF 2D Imager

### Introduction

Integrated Imager Engine	MX7
--------------------------	-----

This section's explanations and instructions are directed toward devices with an integrated (Hand Held Products) HHP 5380SF 2D Imager. Do not use these bar codes for any other imager type or scan engine.

Scan engine manufacturers may offer more bar codes and options than are contained in this section. Please note that the bar codes in this section are only those supported by Honeywell.

See the *device-specific Reference Guide* for instruction when using the imager. There are many imager functions that are controlled by Windows Panel settings e.g., beeper/volume/events, RS232 settings, read timers, etc.

An asterisk (\*) next to an option indicates the default setting. [Technical Assistance](#) (page 8-1) is available if you need help when using the bar codes in this section.

The bar codes contained in this section are to be used when programming the (Hand Held Products) HHP 5380SF decoded imager engine.

5380SF 2D imager engine programming bar codes obtained from sources other than Honeywell cannot be supported.

### Symbologies Enabled (by Default) at Startup

Aztec Code	Interleaved 2 of 5
Codabar	MaxiCode
Code 128	MicroPDF417
Code 39	PDF417
Code 49	Posicode
Code 93	QR Code
Data Matrix	GS1 DataBar Omnidirectional (RSS-14)
EAN/JAN-13	UPC-A
EAN/JAN-8	UPC-E0

The 5380SF 2D Imager reads inverse bar codes when available.

See the following section [Imager Parameters – Symbology Specific](#) (page 4-18) for a full list of supported symbologies and related options.

---

## **Reset to Factory Defaults using the LXEReset Bar Code**

The LXEReset bar code should only be scanned by mobile devices running Data Collection Wedge software.

This bar code must not be scanned by devices running Bar Code Scan Wedge software.

The following function-specific bar code is only used when it is necessary to return the decoder engine back to factory default values.

When the scan is successful, the mobile device emits a double beep and the Scan On indicator is amber. The decoding engine is not available for further bar code scanning until the Scan On indicator turns off. Scanning this bar code does not affect the mobile device's operating system, wireless client or installed software (e.g., AppLock) settings.

## **Pre-Configured 5380SF 2D Imager Default Values**

The following values are set by Honeywell before the Mobile Device is shipped. The imager can be returned to factory defaults by scanning the [Reset to Factory Defaults](#) (page 4-7) bar code.

Factory defaults are listed in the following table.

<b>Imager Parameter</b>	<b>Device Default Value</b>
Factory Default Settings	As built
Good Read Delay	No Delay
Reread Delay	Medium
LED Power Level	High
Aimer Delay	Off (no delay)
Centering Window	Centering Off
Print Weight	4
Working Orientation	Upright
Intercharacter Delay	No delay
Interfunction Delay	No delay
Intermessage Delay	No delay
Codabar	On
Start/Stop Characters	Don't Transmit
Check Character	No Check Character
Concatenation	On
Message Length	Min: 4 / Max: 60
Code 39	On
Start/Stop Characters	Don't Transmit
Check Character	No Check Character
Message Length	Min: 0 / Max: 48
Append	Off
Code 32 Pharmaceutical	Off
Code 39 Full ASCII	Off
Code Page	Not Supported
Interleaved 2 of 5	On

<b>Imager Parameter</b>	<b>Device Default Value</b>
Check Digit	No Check Digit
Message Length	Min: 4 / Max: 80
Code 93	On
Message Length	Min: 0 / Max: 80

---

## Frequently Used Bar Codes

### **Save or Discard Settings**

*Note: The Discard bar code will not function as expected when Save is scanned before scanning Discard.*

After changing a parameter, scan the Save bar code. If you make an error while scanning a parameter option, scan the Discard bar code, scan the correct parameter option and then scan the Save bar code.

Scan the Save bar code each time a parameter is changed.

Save

Discard (before scanning Save)

### **Enable All Symbologies**

Scan the All Symbologies On bar code when you want the ability to decode all the supported symbologies for the imager installed in the mobile device.

Scan the All Symbologies Off bar code when you want to select individual symbologies. Scan the “On” bar code for each symbology desired.

All Symbologies On

All Symbologies Off

Scan the Save bar code after each parameter change.

---

## Supported Imager Symbologies

Aztec Code	Interleaved 2 of 5
Codabar	MaxiCode
Code 128	MicroPDF417
Code 39	PDF417
Code 49	PosiCode
Code 93	QR Code
DataMatrix	GS1 DataBar Omnidirectional (RSS-14)
EAN/JAN-13	UPC-A
EAN/JAN-8	UPC-E0

*Note: Improve decode speed by disabling unused bar code types.*

Refer to a bar code type's main section for the available programming bar codes for that symbology.

*Note: All Postal Code symbologies default to "Off." For best performance when reading a postal symbology, all other postal symbologies should be disabled.*

## Imager Parameters – General

Except for the General imager attributes in this section that can be set by the end-user, imager programming attributes are set using the Windows Scan Wedge panel resident on the Mobile Device.

### Prefix / Suffix

Refer to the section titled "Scanner Control Panel" in the Mobile Device Reference Guide for information and instruction on setting up the following imager parameters:

- Good/Bad Read indicators
- Serial Parameters
- Code ID: AIM, Symbol, Custom
- Symbology Settings including Prefix/Suffix
- Control Character Mapping
- Custom Identifiers

(Hand Held Products) HHP 5380SF 2D Imager prefix and suffix parameters cannot be set, changed, or reset using the bar codes in this section.

### Reset to Factory Defaults

Scan the Default Settings bar code below when you want to reset the imager to the original factory defaults. This action resets the integrated imager settings. It does not affect the mobile device hardware or software settings.

Any imager parameter changes that had been made prior to resetting to factory defaults will need to be set again.

*Note: All Postal Code symbologies default value is "Off." For best performance when reading a postal symbology, all other postal symbologies should be disabled.*

See [Reset to Factory Defaults using the LXEReset Bar Code](#) on page 4-2.

---

## **Good Read Delay**

Set the minimum amount of time before the imager can read another bar code by scanning one of the bar codes below and then scanning the Save bar code in [Save or Discard Settings](#) (page 4-6). *Default = No Delay*

\* No Delay

Short Delay (500 ms)

Medium Delay (1,000 ms)

Long Delay (1,500 ms)

## **User Specified Good Read Delay**

If the bar codes available in section titled “Good Read Delay” are insufficient, you can set the amount of time before the imager can read another bar code using the **User-Specified Good Read Delay** bar code below. *Default = Range: Minimum 0 milliseconds / Maximum 30,000 milliseconds.*

Scan the **User-Specified Good Read Delay** bar code, then scan up to 5 digits in a row using the number symbols on the [Symbols 0 – 9](#) (page 4-83) page at the end of this section, then scan **Save**. If you make an error while scanning the digits (before scanning Save), scan the Discard bar code scan the User-Specified Good Read Delay bar code, scan the correct digits, and the Save bar code again.

---

## **Reread Delay**

Scan one of the **Reread Delay** bar codes below to set the time period before the imager can read the same bar code a second time.

Setting a reread delay may protect against accidental rereads of the same bar code. Use shorter delays in applications where repetitive bar code scanning is required. *Default = Medium (750 ms).*

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

Short (500 ms)

\* Medium (750 ms)

Long (1000 ms)

Extra Long (2000 ms)

## **User Specified Reread Delay**

If the bar codes available in section titled **Reread Delay** are insufficient, you can set the amount of time before the imager can read the same bar code using the **User-Specified Reread Delay** bar code. *Default = Range: Minimum 0 ms / Maximum 30,000 milliseconds.*

Scan the **User-Specified Reread Delay** bar code below, then scan up to 5 digits in a row using the number symbols on the [Symbols 0 – 9](#) (page 4-83) page at the end of this section, then scan the Save bar code in [Save or Discard Settings](#) (page 4-6). If you make an error while scanning the digits (before scanning Save), scan the Discard bar code, then scan the User-Specified Reread Delay bar code, scan the correct digits, and then scan the Save bar code again.

---

## **LED Power Level**

Scan one of the bar codes to set LED and aimer brightness. *Default = LED Power Level High (100%)*

- Off is used when no illumination is needed.
- Low is used if low illumination is sufficient.
- High (the default) is the brightest setting.
- Minimum is the minimum power setting with good read quality.

LED Power Level Low (50%)

\* LED Power Level High (100%)

LED Power Level Off

LED Power Level Minimum (30%)

If you have an aimer delay programmed (See [Aimer Delay](#) on page 4-11), the aimer will be at 100% power during the delay, regardless of the LED Power Level.

*Note: When the imager LED Power Level is set to Off, both the aimer and illumination lights turn off, which may make it difficult to scan bar codes in low light. Adjust the LED Power Level by first moving the mobile device to a brightly lit area and then scan either the Low or the High bar code. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).*

---

## **Aimer Delay**

If the default aimer delay time is insufficient, scan one of the bar codes below to enable enough time to aim the imager at a bar code before the LEDs turn on.

200 milliseconds

\* Off (No delay)

400 milliseconds

During the delay time, the aiming light appears but the LEDs won't turn on until the delay timer expires.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

### ***User-Specified Aimer Delay***

If the bar codes available in section titled "Aimer Delay" are insufficient, you can set the amount of time to use to aim the imager at a bar code before the LEDs turn on. *Default = Off (No Delay) / Range: Minimum 0 ms / Maximum 4,000 milliseconds*

Scan the **User-Specified Aimer Delay** bar code below, then scan up to 4 digits in a row using the number symbols on [Symbols 0 – 9](#) (page 4-83) at the end of this section, then scan **Save** on the same page. If you make an error while scanning the digits (before scanning Save), scan the **Discard** bar code, scan the **User-Specified Aimer Delay** bar code, scan the correct digits, and then scan the **Save** bar code again.

---

## Centering Scan Window

Use Centering to narrow the imager's field of view to make sure the imager reads only those bar codes intended by the user.

In the example below, the gray area is the full imager field of view and the white area is the centering window. Bar code 1 will not be read, while Bar code 2 will be.

The default centering window is a 128x96 pixel area (640x480 default image size) in the center of the imager's field of view. The following diagram illustrates the default top, bottom, left, and right pixel positions, measured from the top and the left side of the imager's field of view.

If a bar code is not within the predefined window, it will not be decoded or output by the imager.

---

If centering is enabled, the imager only reads codes that intersect the centering window specified by the user scanning the Top, Bottom, Left, or Right bar codes that follow.

Centering On

\* Centering Off

Scan **Centering Off** to turn the scan window centering option off. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

Scan **Centering On**, then scan one of the following bar codes to change the top, bottom, left, or right of the centering window.

*Note: The default percent value for Top and Left is 40%, the default percent value for Bottom and Right is 60%.*

Top of Centering Window

Bottom of Centering Window

Left of Centering Window

Right of Centering Window

---

Scan the percent to be used to shift the centering window by scanning 2 digits in a row using the number symbols on [Symbols 0 – 9](#) (page 4-83) page at the end of this section, and scan **Save** on the same page. If you make an error while scanning the digits (before scanning Save), scan the Discard bar code, scan the **Centering On** bar code, scan the top, bottom, left or right bar codes, scan the correct digits, and then scan the Save bar code again.

### ***Print Weight***

Print Weight is used to adjust the way the imager reads [Matrix 2 of 5](#) (page 4-32) symbols. If an imager will be seeing consistently heavily printed Matrix symbols, then a print weight of 6 may improve the reading performance. For consistently light printing, a print weight of 2 may help.

To set a different print weight value than the default of 4, begin by scanning the **Set Print Weight** bar code

Set Print Weight

\* Default Print Weight 4

Next, scan numeric bar codes that correspond to the desired print weight value using the Save bar code in [Save or Discard Settings](#) (page 4-6) at the end of this section. Single digit numbers must have a leading zero e.g., scan “0” and “3” to assign the value of 3 to this option.

If you wish to change the print weight number selection, before scanning the **Save** bar code, scan the Discard bar code on the Symbols 0-9 page. Scan the Save bar code on the same page when you have finished setting the desired print weight numeric value.

---

## **Working Orientation**

Some bar codes are direction sensitive. For example, [Kix \(Netherlands\) Post](#) (page 4-73) can misread when scanned sideways or upside down.

Scan one of the **orientation** bar codes below, then scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

\* Upright

Upside Down

Rotate Clockwise 90°

Rotate Counterclockwise 90°

---

## Intercharacter, Interfunction and Intermassage Delay

Some mobile devices drop information (characters) if data comes through too quickly. Intercharacter, interfunction, and intermessage delays slow the transmission of data, increasing data integrity. Each delay is composed of a 5 millisecond step. The imager can be programmed up to 99 steps (of 5 ms each) for a range between 0 and 495 ms.

### Intercharacter Delay

*Note: Intercharacter delays are not supported in USB serial emulation.*

An intercharacter delay of up to 495 milliseconds may be placed between the transmission of each character of scanned data. The imager can be programmed up to 99 steps (of 5 ms each) for a range between 0 and 495 ms.

Scan the **Set an Intercharacter Delay** bar code below, then set the steps by scanning up to 2 digits in a row using the number symbols on [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

If you make an error while scanning the digits (before scanning Save), scan the Discard bar code, scan the Set an Intercharacter Delay bar code, scan the correct digits, and then scan the Save bar code again. *Default = 0 ms / Range: Min: 0 ms / Max: 495 ms.*

**To remove the delay**, scan the Set an Intercharacter Delay bar code, then scan a zero using the number symbols on [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

### User-Specified Intercharacter Delay

An intercharacter delay of up to 495 milliseconds (ms) may be placed after the transmission of a particular character of scanned data. The imager can be programmed up to 99 steps (of 5 ms each) for a range between 0 and 495 ms. *Default = 0 ms / Range: Min: 0 ms / Max: 495 ms.*

Scan the **Delay Length** bar code below, then set the steps by scanning up to 2 digits in a row using the symbols on [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

If you make an error while scanning the digits (before scanning Save), scan the Discard bar code, scan the Delay Length bar code, scan the correct digits, and then scan the Save bar code again.

Next, scan the **Character to Trigger Delay** bar code below, then the 2-digit hex value for the ASCII character that will trigger the delay. Two digit hex values are listed in the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 4-84) at the end of this section.

**To remove an Intercharacter delay**, scan the Delay Length bar code, then scan a zero using the number symbols on [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

---

## Interfunction Delay

An interfunction delay of up to 495 milliseconds (ms) may be placed between the transmission of each segment of the message string. The imager can be programmed up to 99 steps (of 5 ms each) for a range between 0 and 495 ms. *Default = 0 ms / Range: Min: 0 ms / Max: 495 ms.*

Scan the Interfunction Delay bar code below, then set the steps by scanning up to 2 digits in a row using the symbols on the [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

If you make an error while scanning the digits (before scanning Save), scan the Discard bar code, scan the Interfunction Delay bar code, scan the correct digits, and then scan the Save bar code again.

**To remove an Interfunction delay**, scan the Interfunction Delay bar code, then scan a zero using the number symbols on the [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

## Intermessage Delay

An intermessage delay of up to 495 milliseconds (ms) may be placed between the transmission of each scan transmission. The imager can be programmed up to 99 steps (of 5 ms each) for a range between 0 and 495 ms. *Default = 0 ms / Range: Min: 0 ms / Max: 495 ms.*

Scan the Intermessage Delay bar code below, then set the steps by scanning up to 2 digits in a row using the symbols on the [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

If you make an error while scanning the digits (before scanning Save), scan the Discard bar code, scan the Intermessage Delay bar code, scan the correct digits, and then scan the Save bar code again.

**To remove an Intermessage delay**, scan the Intermessage Delay bar code, then scan a zero using the number symbols on the [Symbols 0 – 9](#) (page 4-83) at the end of this section, and scan Save.

---

## **Imager Parameters – Symbology Specific**

### **All Symbologies On / Off**

Scan the **All Symbologies On** bar code when you want the ability to decode all the symbologies available for the decoding engine installed in the mobile device.

Scan the **All Symbologies Off** bar code when you want to select individual symbologies. Scan the specific symbology “On” bar code for each symbology desired and again for each parameter setting desired.

*Note: Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after each parameter change.*

All Symbologies On

All Symbologies Off

*Note: All Postal Code symbologies default to “Off.” For best performance when reading a postal symbology, all other postal symbologies should be disabled.*

### **Codabar**

Scan the bar code below to set all Codabar parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change.

Codabar Off

\* Codabar On

---

### ***Codabar Start/Stop Characters***

Start/Stop characters identify the leading and trailing ends of the bar code. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change.

Transmit

\* Don't Transmi

### ***Codabar Check Character***

Scan the **No Check Character** bar code below to have the imager read and transmit bar code data with or without a Modulo 16 check character.

Scan the **Validate and Transmit** bar code below to have the imager only read Codabar bar codes printed with a check character, and will transmit this character at the end of the scanned data.

Scan the **Validate, but Don't Transmit** bar code below to have the imager only read Codabar bar codes printed with a check character, and not transmit the check character with the scanned data.

---

### **Codabar Concatenation**

When enabled, the imager strips start and stop characters (if they are the same) from two messages.

For example, two bar codes are scanned, one has a “D” character as a Start character. The other one has a “D” as a Stop character. The two bar codes are concatenated into one bar code with the “D” characters omitted.

Scan the **Require** bar code below to prevent the imager from decoding a single “D” Codabar symbol without it’s expected “D” companion. This setting has no effect on Codabar symbols without Stop/Start D characters.

\* On

Off

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change.

---

## **Codabar Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum and maximum lengths are between 2 and 60 characters.

To set **Codabar Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83) at the end of this section. *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Codabar Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83) at the end of this section. *Maximum = 60.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## **Code 39**

Scan the bar code below to set all Code 39 parameters to their default value.

Code 39 Off

\* Code 39 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change.

### **Code 39 Start/Stop Characters**

Start/Stop characters identify the leading and trailing ends of the bar code. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change. *Default = Don't Transmit.*

Transmit Start/Stop Characters

\* Don't transmit Start/Stop Characters

---

### **Code 39 Check Character**

Scan the **No Check Character** bar code below to set the imager to read and transmit bar code data with or without a check character. *Default = No Check Character*

Scan the **Validate and Transmit** bar code below to set the imager to only read Code 39 bar codes printed with a check character, and transmit this character at the end of the scanned data.

Scan the **Validate but Don't Transmit** bar code below to set the imager to only read Code 39 bar codes printed with a check character, and not transmit the check character with the scanned data.

### **Code 39 Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum and maximum lengths are between 0 and 48 characters. *Default = 0.*

To set **Code 39 Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83) at the end of this section.

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Code 39 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 48.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

### **Code 39 Append**

This option stores several Code 39 bar codes before transmitting. When this function is enabled (On), the imager stores Code 39 bar codes that start with a space (excluding the start and stop symbols), but does not immediately transmit the data. The data is stored in the order in which the bar codes were read, deleting the first space from each. The imager transmits the appended data when it reads a Code 39 bar code that starts with a character other than a space. *Default = Off.*

\* Off

On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

### **Code 32 Pharmaceutical (PARAF)**

Code 32 Pharmaceutical is a form of the Code 39 symbology used by Italian pharmacies. This symbology is also known as PARAF. *Default = Off.*

*Note: [Trioptic Code](#) (page 4-61) must be turned off while scanning Code 32 Pharmaceutical codes.*

\* Off

On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change..

---

## **Code 39 Full ASCII**

When enabled, the ASCII character set assigns a code to letter, punctuation marks, numerals, and most control keystrokes on the keyboard. *Default = On.*

The first 32 codes are non-printable and are assigned to keyboard control characters such as [Backspace] and [Return or Enter]. The other 96 are called printable codes because all but [Space] and [Delete] produce visible characters.

Code 39 Full ASCII interprets the bar code special character (\$ + % /) preceding a Code 39 character and assigns an ASCII character value to the pair. For example, \$V is decoded as the ASCII character SYN, and /C is decoded as the ASCII character #.

Character pairs /M and /N decode as a minus sign and period respectively. Character pairs /P through /Y decode as 0 through 9.

See the table titled [ASCII Character Pairs](#) (page 4-87) at the end of this section.

Set this parameter by scanning either of the bar codes shown below.

Off

\* On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change..

## **Code 39 Code Page**

*Note: Not supported in this release.*

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. *Default= 2 (ISO 2022 – Automatic National Replacement Characters).*

---

## ***Interleaved 2 of 5***

Scan the bar code below to set all Interleaved 2 of 5 parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

Interleaved 2 of 5 Off

\* Interleaved 2 of 5 On

## ***Check Digit***

Scan the **No Check Digit** bar code below to set the imager to read and transmit bar code data with or without a check digit.

Scan the **Validate and Transmit** bar code below to set the imager to only read Interleaved 2 of 5 bar codes printed with a check digit, and transmit this digit at the end of the scanned data.

Scan the **Validate but Don't Transmit** bar code below to set the imager to only read Interleaved 2 of 5 bar codes printed with a check digit, and not transmit the check digit with the scanned data.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

---

### ***Interleaved 2 of 5 Message Length***

This option decodes a code type within a specified minimum and maximum range. Valid minimum and maximum lengths are between 2 and 80 characters.

To set **Interleaved 2 of 5 Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Interleaved 2 of 5 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## Code 93

Scan the bar code below to set all Code 93 parameters to their default value.

Scan the Save bar code when you have finished setting each desired value.

Code 93 Off

\* Code 93 On

### Code 93 Message Length

This option decodes a code type within a specified minimum and maximum range. Valid minimum and maximum lengths are between 0 and 80 characters. *Default = 0.*

To set **Code 93 Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using the [Symbols 0 – 9](#) (page 4-83). *Default = 0.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Code 93 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

### **Code 93 Code Page**

*Note: Not supported in this release.*

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. *Default = 2 (ISO 2022 – Automatic National Replacement Characters)*

---

## ***Straight 2 of 5 Industrial***

Scan the bar code below to set all Straight 2 of 5 Industrial parameters to their default value.

\* Straight 2 of 5 Industrial Off

Straight 2 of 5 Industrial On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### ***Straight 2 of 5 Industrial Message Length***

This option decodes a code type within a specified minimum and maximum range. Valid minimum and maximum lengths are between 1 and 48 characters.

To set **Straight 2 of 5 Industrial Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Straight 2 of 5 Industrial Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 48.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## ***Straight 2 of 5 IATA***

Scan the bar code below to set all Straight 2 of 5 IATA parameters to their default value.

\* Straight 2 of 5 IATA Off

Straight 2 of 5 IATA On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### ***Straight 2 of 5 IATA Message Length***

This option decodes a code type within a specified minimum and maximum range. Valid minimum and maximum lengths are between 1 and 48 characters.

To set **Straight 2 of 5 IATA Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Straight 2 of 5 IATA Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 48.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## Matrix 2 of 5

Scan the bar code below to set all Matrix 2 of 5 parameters to their default value.

\* Matrix 2 of 5 Off

Matrix 2 of 5 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change.

### Matrix 2 of 5 Message Length

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 80 characters.

To set **Matrix 2 of 5 Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Matrix 2 of 5 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## **Code 11**

Scan the bar code below to set all Code 11 parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

\* Code 11 Off

Code 11 On

### ***Code 11 Check Digits Required***

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

One Check Digit

\* Two Check Digits

---

### **Code 11 Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 80 characters. *Default = 4.*

To set **Code 11 Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83).

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Code 11 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## **Code 128**

Scan the bar code below to set all Code 128 parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

Code 128 Off

\* Code 128 On

## ***ISBT 128 Concatenation***

Scan one of the bar codes below to turn **ISBT 128 Concatenation** on or off.

\* ISBT 128 Concatenation Off

ISBT 128 Concatenation On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

ISBT = International Society of Blood Transfusion

---

### **Code 128 Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 0 and 80 characters. *Default = 0.*

To set **Code 128 Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83).

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Code 128 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

### **Code 128 Code Page**

*Note: Not supported in this release.*

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. *Default = 2 (ISO 2022 Automatic National Replacement Characters).*

---

## ***Telepen***

Scan the bar code below to set all Telepen parameters to their default value.

\* Telepen Off

Telepen On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### ***Telepen Output***

**AIM Telepen Output** – The imager reads symbols with start/stop pattern 1 and decodes them as standard full ASCII.

**Original Telepen Output** – The imager reads symbols with start/stop pattern 1 and decodes them as compressed numeric with optional full ASCII.

\* AIM Telepen Output

Original Telepen Output

---

## ***Telepen Message Length***

This option .decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 60 characters.

To set **Telepen Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Telepen Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 60.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value

---

## **UPC-A**

Scan the bar code below to set all UPC-A parameters to their default value.

UPC-A Off

\* UPC-A On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### ***UPC-A Check Digit***

Scan the **UPC-A Check Digit Off** bar code to disable transmission of the check digit at the end of the scanned data.  
*Default = UPC-A Check Digit On.*

UPC-A Check Digit Off

\* UPC-A Check Digit On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **UPC-A Number System**

Scan the **UPC-A Number System Off** bar code to disable transmission of the numeric system digit at the beginning of the scanned data. *Default = UPC-A Number System On.*

UPC-A Number System Off

\* UPC-A Number System On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

## **UPC-A Addenda**

Scan the **2-Digit Addenda On** bar code below to enable the addition of 2 digits to the end of all scanned UPC-A data. *Default = 2 Digit Addenda Off.*

\* 2 Digit Addenda Off

2 Digit Addenda On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

Scan the **5 Digit Addenda On** bar code below to enable the addition of 5 digits to the end of all scanned UPC-A data. *Default = 5 Digit Addenda Off.*

\* 5 Digit Addenda Off

---

5 Digit Addenda On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.  
See Also: UPC-A Addenda Required and UPC-A Addenda Separator below.

***UPC-A Addenda Required***

Scan the **UPC-A Addenda Required** bar code below to enable the imager to read only UPC-A bar codes that have addenda. *Default = UPC-A Addenda Not Required.*

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

Next enable a 2 or 5 digit addenda using a programming bar code in the previous section titled UPC-A Addenda.

\* UPC-A Addenda Not Required

UPC-A Addenda Required

See Also: UPC-A Addenda and UPC-A Addenda Separator.

***UPC-A Addenda Separator***

Scan the **UPC-A Addenda Separator Off** bar code to disable the imager adding a space between the scanned data from the bar code and the data from the addenda. *Default = UPC-A Addenda Separator On.*

UPC-A Addenda Separator Off

\* UPC-A Addenda Separator On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.  
See Also: UPC-A Addenda and UPC-A Addenda Required.

---

### **UPC-A / EAN-13 with Extended Coupon Code**

Scan the Off bar code below to disable UPC-A and EAN-13 with Extended Coupon Code. *Default = UPC-A / EAN-13 with Extended Coupon Code On.*

Extended Coupon Code Off

\* Extended Coupon Code On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **UPC-E0**

Scan the bar code below to set all UPC-E0 parameters to their default value.

UPC-E0 Off

\* UPC-E0 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **UPC-E0 Expand**

Scan the **UPC-E0 Expand On** bar code to enable expanding the UPC-E code to the 12 digit UPC-A format. *Default = UPC-E0 Expand Off.*

\* UPC-E0 Expand Off

UPC-E0 Expand On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

---

## **UPC-E0 Addenda**

Scan the **UPC-E0 2 Digit Addenda On** bar code to enable the addition of 2 digits to the end of all scanned UPC-E data. *Default = 2 Digit Addenda Off.*

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

\* UPC-E0 2 Digit Addenda Off

UPC-E0 2 Digit Addenda On

Scan the **UPC-E0 5 Digit Addenda On** bar code to enable the addition of 5 digits to the end of all scanned UPC-E data. *Default = 5 Digit Addenda Off.*

\* UPC-E0 5 Digit Addenda Off

UPC-E0 5 Digit Addenda On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.  
See Also: UPC-E0 Addenda Required and UPC-E0 Addenda Separator.

---

### ***UPC-E0 Addenda Required***

Scan the **UPC-E0 Addenda Required** bar code below to enable the imager to read only UPC-E bar codes that have addenda. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6). *Default = UPC-E0 Addenda Not Required*

\* UPC-E0 Addenda Not Required

UPC-E0 Addenda Required

Next enable a 2 or 5 digit addenda using a programming bar code in the section titled [UPC-E0 Addenda](#) (page 4-44). Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value. See Also: UPC-E0 Addenda and UPC-E0 Addenda Separator.

### ***UPC-E0 Addenda Separator***

Scan the **UPC-E0 Addenda Separator Off** bar code below to disable the imager adding a space between the scanned data from the bar code and the data from the addenda. *Default = UPC-E0 Addenda Separator On.*

UPC-E0 Addenda Separator Off

\* UPC-E0 Addenda Separator On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value. See Also: UPC-E0 Addenda and UPC-E0 Addenda Required.

---

### **UPC-E0 Check Digit**

Scan the **UPC-E0 Check Digit Off** bar code below to disable transmission of the check digit at the end of the scanned data. *Default = UPC-E0 Check Digit On*

UPC-E0 Check Digit Off

\* UPC-E0 Check Digit On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

### **UPC-E0 Number System**

Scan the **UPC-E0 Number System Off** bar code to disable transmission of the numeric system digit at the beginning of the scanned data.

UPC-E0 Number System Off

\* UPC-E0 Number System On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **UPC-E1**

To read UPC bar codes that lead with the 0 number system code, enable UPC-E0. See previous section titled [UPC-E0](#) (page 4-43).

To read UPC codes that lead with the 1 number system code, scan the **UPC-E1 On** bar code. *Default = UPC-E1 Off.*

\* UPC-E1 Off

UPC-E1 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **EAN / JAN-13**

Scan the bar code below to set all EAN/JAN-13 parameters to their default value.

*Note: Enable or disable EAN13 with Extended Coupon Code using the bar codes in section titled [UPC-A / EAN-13 with Extended Coupon Code](#) (page 4-42).*

EAN/JAN-13 Off

\* EAN/JAN-13 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **EAN / JAN-13 Addenda**

Scan the **2 Digit Addenda On** bar code to enable the addition of 2 digits to the end of all scanned EAN/JAN-13 data.  
*Default = 2 Digit Addenda Off.*

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

\* 2 Digit Addenda Off

2 Digit Addenda On

---

Scan the **5 Digit Addenda On** bar code to enable the addition of 5 digits to the end of all scanned EAN/JAN-13 data.  
*Default = 5 Digit Addenda Off.*

\* 5 Digit Addenda Off

5 Digit Addenda On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.  
See Also: EAN/JAN-13 Addenda Required and EAN/JAN-13 Addenda Separator.

***EAN / JAN-13 Addenda Required***

Scan the EAN / JAN-13 Addenda Required bar code to enable the imager to read only EAN/JAN-13 bar codes that have addenda. *Default = EAN / JAN-13 Addenda Not Required.*

Scan the Save bar code.

Next enable a 2 or 5 digit addenda using a programming bar code in the section titled [EAN / JAN-13 Addenda](#) (page 4-48).

\* EAN / JAN-13 Addenda Not Required

EAN / JAN-13 Addenda Required

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.  
See Also: EAN/JAN-13 Addenda and EAN/JAN-13 Addenda Separator.

---

### ***EAN / JAN-13 Addenda Separator***

Scan the **EAN / JAN-13 Addenda Separator Off** bar code to disable the imager adding a space between the scanned data from the bar code and the data from the addenda. *Default = EAN / JAN-13 Addenda Separator On.*

EAN / JAN-13 Addenda Separator Off

\* EAN / JAN-13 Addenda Separator On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.  
See Also: EAN/JAN-13 Addenda and EAN/JAN-13 Addenda Required.

### ***EAN / JAN-13 Check Digit***

Scan the **EAN / JAN-13 Check Digit Off** bar code to disable transmission of the check digit at the end of the scanned data. *Default = EAN / JAN-13 Check Digit On.*

EAN / JAN-13 Check Digit Off

\* EAN / JAN-13 Check Digit On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## ***ISBN Translate***

Scan the **ISBN Translate On** bar code to translate EAN-13 Bookland symbols into their equivalent ISBN (International Standard Book Number) number format.

\* ISBN Translate Off

ISBN Translate On

Scan the Save bar code when you have finished setting the desired value.

---

## **EAN / JAN-8**

Note: Enable or disable EAN-13 with Extended Coupon Code using the bar codes in section titled [UPC-A / EAN-13 with Extended Coupon Code](#) (page 4-42).

Scan the bar code below to set all EAN/JAN-8 parameters to their default value.

EAN/JAN-8 Off

\* EAN/JAN-8 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **EAN / JAN-8 Addenda**

Scan the **2 Digit Addenda On** bar code to enable the addition of 2 digits to the end of all scanned EAN/JAN-8 data.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

\* 2 Digit Addenda Off

2 Digit Addenda On

---

Scan the **5 Digit Addenda On** bar code to enable the addition of 5 digits to the end of all scanned EAN/JAN-8 data.  
Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

\* 5 Digit Addenda Off

5 Digit Addenda On

See Also: EAN/JAN-8 Addenda Required and EAN/JAN-8 Addenda Separator.

***EAN / JAN-8 Addenda Required***

Scan the **EAN / JAN-8 Addenda Required** bar code below to enable the imager to read only EAN/JAN-8 bar codes that have addenda. Scan the **Save** bar code.

Next enable a 2 or 5 digit addenda using a programming bar code in [EAN / JAN-8 Addenda](#) (page 4-52).

\* EAN / JAN-8 Addenda Not Required

EAN / JAN-8 Addenda Required

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

See Also: EAN/JAN-8 Addenda and EAN/JAN-8 Addenda Separator.

---

### ***EAN / JAN-8 Addenda Separator***

Scan the **EAN / JAN-8 Addenda Separator Off** bar code below to disable the imager adding a space between the scanned data from the bar code and the data from the addenda.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6).

\*EAN / JAN-8 Addenda Separator Off

\* EAN / JAN-8 Addenda Separator On

### ***EAN / JAN-8 Check Digit***

Scan the **EAN / JAN-8 Check Digit Off** bar code below to disable transmission of the check digit at the end of the scanned data.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

EAN / JAN-8 Check Digit Off

\* EAN / JAN-8 Check Digit On

---

## **MSI**

Scan the bar code below to set all MSI parameters to their default value.

\* MSI Off

MSI On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

### ***MSI Check Character***

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.  
*Default = Validate Type 10, but Don't Transmit.*

Scan the **Validate Type 10 and Transmit** bar code below to set the imager to only read MSI bar codes printed with the specified type check character, and transmit the check character at the end of the scanned data.

Scan the **Validate Type 10 but Don't Transmit** bar code below to set the imager to only read MSI bar codes printed with the specified type check character, but not transmit the check character with the scanned data.

---

## **MSI Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 4 and 48 characters.

To set **MSI Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **MSI Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 48.*

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the **Save** bar code when you have finished setting the correct maximum message numeric value.

---

## ***Plessey Code***

Scan the bar code below to set all Plessey Code parameters to their default value.

\* Plessey Code Off

Plessey Code On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

### ***Plessey Message Length***

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 4 and 48 characters.

To set **Plessey Code Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the correct minimum message numeric value.

To set **Plessey Code Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 48.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Keypad Alphanumeric Symbols page. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the correct maximum message numeric value.

---

## **GS1 DataBar (RSS)**

Default =

- *GS1 DataBar Omnidirectional (RSS-14) = On*
- *GS1 DataBar Limited (RSS Limited) = On*
- *GS1 DataBar Expanded (RSS Expanded) = On*

### **GS1 DataBar Omnidirectional (RSS-14)**

Scan the bar code below to set all GS1 DataBar Omnidirectional (RSS-14) parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

GS1 DataBar Omnidirectional (RSS-14) Off

\* GS1 DataBar Omnidirectional (RSS-14) On

### **GS1 DataBar Limited (RSS Limited)**

Scan the bar code below to set all GS1 DataBar Limited (RSS Limited) parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

GS1 DataBar Limited (RSS Limited) Off

\* GS1 DataBar Limited (RSS Limited) On

---

### **GS1 DataBar Expanded (RSS Expanded)**

Scan the bar code below to set all GS1 DataBar Expanded (RSS Expanded) parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

GS1 DataBar Expanded (RSS Expanded) Off

\* GS1 DataBar Expanded (RSS Expanded)  
On

### **GS1 DataBar Expanded (RSS Expanded) Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 4 and 74 characters.

To set **GS1 DataBar Expanded (RSS Expanded) Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the correct minimum message numeric value. *Default = 4.*

To set **GS1 DataBar Expanded (RSS Expanded) Message Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the correct maximum message numeric value. *Default = 74.*

---

## **PosiCode**

*Note: PosiCode A and B must be On to read any of the PosiCode symbologies.*

Scan the bar code below to set all PosiCode parameters to their default value.

PosiCode A and B Off

\* PosiCode A and B On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **PosiCode A and B**

*Note: PosiCode A and B must be On to read any of the PosiCode symbologies.*

A and B On (No Limited)

A and B and Limited A On (Limited B Off)

\* A and B and Limited B On (Limited A Off)

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **PosiCode Message Length**

*Note: PosiCode A and B must be On to read any of the PosiCode symbologies.*

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 2 and 80 characters.

To set **PosiCode Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **PosiCode Message Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 48.*

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

## **Trioptic Code**

Trioptic Code is used when labelling magnetic storage media.

*Note: Trioptic Code must be turned off when scanning [Code 32 Pharmaceutical \(PARAF\)](#) (page 4-24) codes.*

\* Trioptic Code Off

Trioptic Code On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **Codablock F**

Scan the bar code below to set all Codablock F parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

\* Codablock F Off

Codablock F On

## **Codablock F Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 2048 characters. *Default = 1.*

To set **Codablock F Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83).

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Symbols 0 - 9 page. Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the correct minimum message numeric value.

To set **Codablock F Message Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 2048.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## Code 16K

Scan the bar code below to set all Code 16K parameters to their default value.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

\* Code 16K Off

Code 16K On

### Code 16K Message Length

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 0 and 160 characters. *Default = 1.*

To set **Code 16K Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83).

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Code 16K Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 160.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## Code 49

Scan the bar code below to set all Code 49 parameters to their default value.

Code 49 Off

\* Code 49 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **Code 49 Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 81 characters. *Default = 1.*

To set **Code 49 Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83).

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Code 49 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 81.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## PDF417

Scan the bar code below to set all PDF417 parameters to their default value.

PDF417 Off

\* PDF417 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **PDF417 Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 2750 characters.

To set **PDF417 Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard the bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **PDF417 Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using the Save bar code in [Save or Discard Settings](#) (page 4-6). *Default = 2750.*

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## MicroPDF417

Scan the bar code below to set all MicroPDF417 parameters to their default value.

MicroPDF417 Off

\* MicroPDF417 On

Scan the **Save** bar code when you have finished setting each desired value.

### **MicroPDF417 Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 366 characters.

To set **MicroPDF417 Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **MicroPDF417 Message Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 2750.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## ***EAN-UCC Composite Codes***

EAN-UCC Composite symbologies allow for the co-existence of symbologies already in use.

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

\* EAN-UCC Composite Codes Off

EAN-UCC Composite Codes On

## ***UPC/EAN Version***

Scan the **UPC/EAN Version On** bar code to decode EAN-UCC Composite symbols that have a UPC or EAN linear component.

This does not affect EAN-UCC Composite symbols with a UCC/EAN-128 or GS1 DataBar (RSS) linear component.

\* UPC/EAN Version Off

UPC/EAN Version On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## ***EAN-UCC Composite Code Message Length***

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 2435 characters.

To set **EAN-UCC Composite Code Message Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **EAN-UCC Composite Code Message Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 2435.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

### ***EAN-UCC Emulation***

The imager can automatically format the output from any EAN•UCC data carrier to emulate what would be encoded in an equivalent UCC/EAN-128 or RSS and Composite symbol. *Default = Off*

EAN•UCC data carriers include UPC-A and UPC-E, EAN-13 and EAN-8, ITF-14, UCC/EAN-128, and EAN•UCC GS1 DataBar (RSS) and Composites.

Data from 2D symbols such as Aztec Code, Data Matrix, or QR Code, which encode a leading FNC1, also invoke EAN•UCC emulation.

If **UCC/EAN-128 Emulation** is selected, the AIM Symbology Identifier is reported as “jC1”.

If **GS1 DataBar (RSS) Emulation** is selected, the AIM Symbology Identifier is reported as “je0.”

Any application that accepts EAN•UCC data can be simplified since it only needs to recognize one data carrier type.

\* EAN-UCC Emulation Off

GS1 DataBar (RSS) Emulation

---

UCC/EAN 128 Emulation

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

***TCIF Linked Code 39 (TLC39)***

This code is a composite code since it has a Code 39 linear component and a MicroPDF417 stacked code component.

All bar code readers are capable of reading the Code 39 linear component.

The MicroPDF417 component can only be decoded if TLC39 On is selected. The linear component may be decoded as Code 39 even if TLC39 is off.

\* TLC39 Off

TLC39 On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **Postal Code Symbologies**

*Note: For best performance when reading a postal symbology, all other postal symbologies should be turned Off.*

If you wish to change your selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished.

### **Postnet**

\* Postnet Off

Postnet On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **Postnet Check Digit**

Scan the **Transmit Check Digit** bar code to enable transmission of the check digit at the end of the scanned data.

\* Don't Transmit Check Digit

Transmit Check Digit

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## ***Planet Code***

\* Planet Code Off

Planet Code On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### ***Planet Code Check Digit***

Scan the **Transmit Check Digit** bar code to enable transmission of the check digit at the end of the scanned data.

\* Don't Transmit Check Digit

Transmit Check Digit

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## ***British Post***

\* British Post Off

British Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

## ***Canadian Post***

\* Canadian Post Off

Canadian Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **Kix (Netherlands) Post**

*Note: Kix code can misread when scanned sideways or upside down.*

\* Kix Post Off

Kix Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

## **Australian Post**

\* Australian Post Off

Australian Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## **Japanese Post**

\* Japanese Post Off

Japanese Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

## **China Post**

Scan the bar code below to set all China Post parameters to their default value.

\* China Post Off

China Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **China Post Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 2 and 80 characters.

To set **China Post Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

---

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **China Post Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code on the Symbols 0 - 9 page. Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## **Korea Post**

Scan the bar code below to set all Korea Post parameters to their default value.

\* Korea Post Off

Korea Post On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### **Korea Post Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 2 and 80 characters.

To set **Korea Post Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 4.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Korea Post Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 80.*

If you wish to change your message length number selection, before scanning the Save bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6) Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## QR Code

This selection applies to both **QR Code** and **MicroQR Code**.

Scan the bar code below to set all QR Code parameters to their default value.

QR Code Off

\* QR Code On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### QR Code Message Length

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 3500 characters.

To set **QR Code Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **QR Code Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 3500.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## Data Matrix

Scan the bar code below to set all Data Matrix parameters to their default value.

Data Matrix Off

\* Data Matrix On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

### Data Matrix Message Length

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 1500 characters.

To set **Data Matrix Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **Data Matrix Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1500.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## MaxiCode

Scan the bar code below to set all MaxiCode parameters to their default value.

MaxiCode Off

\* MaxiCode On

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) after any change.

### **MaxiCode Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 150 characters.

To set **MaxiCode Minimum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct minimum message numeric value.

To set **MaxiCode Maximum Message Length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 50.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the Discard bar code in [Save or Discard Settings](#) (page 4-6). Scan the Save bar code when you have finished setting the correct maximum message numeric value.

---

## Aztec Code

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting each desired value.

Aztec Code Off

\* Aztec Code On

Default all Aztec Code settings

### **Aztec Code Message Length**

This option decodes a code type within a specified minimum and maximum range. Valid minimum lengths and maximum lengths are between 1 and 3750 characters.

To set **Aztec Code minimum message length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired minimum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 1.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the **Discard** bar code in [Save or Discard Settings](#) (page 4-6). Scan the **Save** bar code when you have finished setting the correct minimum message numeric value.

To set **Aztec Code maximum message length**, first scan this bar code:

Next, scan numeric bar codes that correspond to the desired maximum message value using [Symbols 0 – 9](#) (page 4-83). *Default = 3750.*

If you wish to change your message length number selection, before scanning the **Save** bar code, scan the **Discard** bar code in [Save or Discard Settings](#) (page 4-6). Scan the **Save** bar code when you have finished setting the correct maximum message numeric value.

---

### ***Aztec Runes***

Select **Enable Runes** if you are scanning Aztec runes, which are the smallest type of Aztec Code symbol with the ability to encode a very short license plate message.

\* Disable Runes

Enable Runes

Scan the Save bar code in [Save or Discard Settings](#) (page 4-6) when you have finished setting the desired value.

---

## Keypad Alphanumeric Symbols (A-F, 0-9)

The bar codes shown below represent:

- an alpha character, with values from A through F
- a numeric keypad, with decimal values 0 through 9.

Each label can be scanned individually to enter a numeric or alpha value. Use these keypad value symbols to enter alphanumeric input in the course of performing an imager configuration.

### **Symbols A – F**

*Note: Scanning the Discard bar code will discard imager coding data entered since the last scan of the Save bar code.*

Scan the **Save** bar code after each parameter change.

A

B

C

D

# NX3XX Laser Scanner

## Introduction

<b>Integrated Laser Engine</b>	MX7 Tecton	MX8
--------------------------------	------------	-----

This section's explanations and instructions are directed toward devices with an integrated N43XX and N73XX Laser Scanner engine. Please do not scan the bar codes in this section with any other bar code reader engine.

Configuration bar codes in this section are designed for the MX7 Tecton and the MX8. The MX7 Tecton may have a N43XX or N73XX scan engine. The MX8 may have a N43XX scan engine.

Determining the type of scan engine in your decoding device is an important requirement before using it to scan a configuration bar code. If you are unsure, contact your System Administrator for assistance with your mobile device.

Scan engine manufacturers may offer more bar codes and options than are contained in this section. Please note that the bar codes in this section are only those supported by Honeywell on the mobile devices listed above. The MX8 will beep twice when a configuration bar code is successfully scanned.

[Technical Assistance](#) (page 8-1) is available if you need help when using the bar codes in this section.

An asterisk (\*) next to an option indicates the default setting.

**To change a parameter value:** Scan the appropriate bar code in this section. After the Save bar code is scanned (where indicated), the new value replaces the standard default value in memory.

## Identify the Scan Engine

1. Open the Data Collection application panel on the mobile device.
2. Select the About tab. The type of integrated scan engine in your device is shown in the Scanner segment.
3. If the scanner is listed as 4313-TTL (*N43XX*) or 7313-TTL (*N73XX*) use the bar codes in this chapter to configure the scan engine.

## Supported Bar Code Symbolologies

China Post (Hong Kong 2 of 5)	Matrix 2 of 5
Codabar	MSI
Code 11	NEC 2 of 5
Code 128	Plessey
Code 39	Straight 2 of 5 IATA
Code 93	Straight 2 of 5 Industrial
EAN/JAN-13	Telepen
EAN/JAN-8	Trioptic Code
GS1 DataBar (RSS)	UPC-A
GS1-128	UPC-A/EAN-13
Interleaved 2 of 5	UPC-E0

## Pre-Configured Default Values

N43XX/N73XX Parameter	Default
Aimer Delay	Off
Centering	Off
Communication Check Character	None
Decode Security	Low
Laser Scan Angle	Full Laser Beam Sweep (48°)
No Read	Off
Power Save Mode	Hibernate (Low Power)
Power Save Mode Timeout	1 second
Read Time-Out	3 sec. (3000 ms)
Reread Delay	Medium (750 ms)
User Specified Reread Delay	0 to 30,000 ms
<b>Symbologies</b>

---

## **Setting Custom Defaults**

*Bar Code Decoder Engine = N43XX and N73XX*

You have the ability to create a set of menu commands as your own custom defaults. To do so, scan the Set Custom Defaults bar code below before each menu command or sequence you want saved. If your command requires scanning numeric codes then a Save code, that entire sequence will be saved to your custom defaults. Scan the Set Custom Defaults code again before the next command you want saved to your custom defaults.

Set Custom Defaults

Save Custom Defaults

You may have a series of custom settings and want to correct a single setting. To do so, just scan the new setting to overwrite the old one. For example, if you had previously saved the setting for Decode Security at Low to your custom defaults, and decide you want the security set to High, just scan the Set Custom Defaults bar code, then scan the Decode Security High bar code, and then Save Custom Defaults. The rest of the custom defaults will remain, but the security setting will be updated.

## **Resetting the Custom Defaults**

If you want the custom default settings restored to your engine, scan the Activate Custom Defaults bar code below. This resets the engine to the custom default settings. If there are no custom defaults, it will reset the engine to the factory default settings. Any settings that have not been specified through the custom defaults will be defaulted to the factory default settings.

Activate Custom Defaults

---

## Resetting the Factory Defaults

Bar Code Decoder Engine = N43XX and N73XX

*Note: This selection erases your custom settings and resets the scanner to the factory default values set before shipping.*

If you are not sure which programming options are in your bar code reader, or you have changed some options and want to restore the reader to the original default settings, scan the **Reset** bar code below. If you have custom defaults, they are eliminated when the Reset bar code is scanned. The Reset Factory Defaults bar code is only available when the Data Collection Wedge is installed in the scanning device.

[Pre-Configured Default Values](#) (page 5-2) lists the factory default settings for each of the commands, indicated by an asterisk (\*), on the following bar code reader programming pages.

*Note: If stripping, data matching, minimum length or symbologies are configured incorrectly in your saved custom defaults, the incorrectly configured bar code is not decoded.*

Reset Factory Defaults

When the scan is successful, the mobile device emits a double beep and the Scan On indicator is amber. The decoding engine is not available for further bar code scanning until the Scan On indicator turns off. Scanning this bar code does not affect the mobile device's operating system, wireless client or installed software (e.g., AppLock) settings.

## Scanner Parameters – General

### Aimer Delay

Bar Code Decoder Engine = N43XX and N73XX

This sets the aiming dot time period length before the aim beam expands to read a bar code. Scan one of the bar codes below to set Aimer Delay timeout. Open and close the Data Collection Wedge to save the Aimer Delay changed value. Scan the Reset bar code on the [Resetting the Factory Defaults](#) (page 5-6) to set Aimer Delay back to default. *Default = 0 milliseconds (Aimer Delay Off).*

250 ms / .25 sec

500 ms / .5 sec

---

750 ms / .75 sec

SCNDLY750.

1000 ms / 1 sec

SCNDLY1000.

1500 ms / 1.5 sec

SCNDLY1500.

2000 ms / 2 sec

SCNDLY5000.

10000 ms / 10 sec

SCNDLY10000.

30000 ms / 30 sec

SCNDLY30000.

---

## Centering

*Bar Code Decoder Engine = N43XX and N73XX*

Use Centering to narrow the engine's field of view to make sure the engine reads only those bar codes intended by the user. For instance, if multiple codes are placed closely together, centering will insure that only the desired codes are read.

Scan **Centering On**, then scan one of the following bar codes to change the left or right of the centering window. To set the percent you want to shift the centering window scan the digits on **0 - 9** (page 5-132) then scan Save on [Save, Discard, Reset](#) (page 5-135). *Default = 40% Left and 60% Right.*

Centering On

\* Centering Off

Left of Centering Window

Right of Centering Window

---

## Communication Check Character

Bar Code Decoder Engine = N43XX and N73XX

To enhance security, you can specify the transmission type of a check character; either LRC where the calculation starts on the first transmitted character, LRC where the calculation starts on the second transmitted character, or CRC.

*Note: This option adds a check character to the bar code data for all symbologies. If you need to enable or disable check characters for individual symbologies, see [Scanner Parameters - Symbologies](#) (page 5-20).*

Scan the following bar code to set the communication check character type. *Default = None.*

\* None

LRC Starts on 1st Character

LRC Starts on 2nd Character

CRC

---

## **Decode Security**

*Bar Code Decoder Engine = N43XX and N73XX*

This selection allows you to adjust the decode security needed while scanning. For good quality codes, choose Low to achieve fast scan speed. For codes prone to misreads, choose High. *Default = Low.*

*Note: Increasing the security level may decrease the scan speed.*

\* Low

Low/Medium

Medium/High

High

---

## **Laser Scan Angle**

*Bar Code Decoder Engine = N43XX and N73XX*

The laser scan angle can be set to Reduced Laser Beam Sweep (35°) or Full Laser Beam Sweep (48°). Laser Scan Angle is not available for wide angle models. *Default = Full Laser Beam Sweep (48°).*

\* Full Laser Beam Sweep (48°)

Reduced Laser Beam Sweep (35°)

## **No Read**

*Bar Code Decoder Engine = N43XX and N73XX*

With No Read turned On, the scanner notifies you if a code cannot be read. If using a WordPad window, an "NR" appears when a code cannot be read. If No Read is turned Off, the "NR" will not appear. *Default = Off.*

The hex code for the No Read symbol is 9C.

On

\* Off

---

## **Power Save Mode**

*Bar Code Decoder Engine = N43XX and N73XX*

The scan engine has three Power Save Modes: Off, Sleep Mode, and Hibernate. In **Off** mode all components are powered on and the scan engine is in operating mode. In **Sleep Mode**, some components are powered off. In **Hibernate** all components are powered off.

Default = Hibernate.

Off

Sleep Mode

\* Hibernate

## **Power Save Mode Timeout**

*Bar Code Decoder Engine = N43XX and N73XX*

This allows you to set the length (in seconds) for power save timeout. To set the length scan the **Power Save Timeout** bar code below, then set the timeout (from 0-65535 seconds) by scanning the digits on **0 - 9** (page 5-132) then scan [Save](#) on [Save, Discard, Reset](#) (page 5-135). The scan engine goes into a power save mode (Sleep or Hibernate) at timeout after a successful scan or at the end of the duration of inactivity.

*Default = 1 second.*

Power Save Timeout

---

## Prefix/Suffix Overview

*Bar Code Decoder Engine = N43XX and N73XX*

When a bar code is scanned, additional information is sent to the host computer along with the bar code data. This group of bar code data and additional, user-defined data is called a “message string.” The selections in this section are used to build the user-defined data into the message string.

Prefix and Suffix characters are data characters that can be sent before and after scanned data. You can specify if they should be sent with all symbologies, or only with specific symbologies. The following illustration shows the breakdown of a message string:

Prefix	Scanned Data	Suffix
1-11 alpha numeric and control characters	variable length	1-11 alpha numeric and control characters

### Points to Keep In Mind

- It is not necessary to build a message string. The selections in this section are only used if you wish to alter the default settings. *Default prefix = None. Default suffix is dependent on interface.*
- A prefix or suffix may be added or cleared from one symbology or all symbologies.
- You can add any prefix or suffix from the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) plus Code I.D. and AIM I.D.
- You can string together several entries for several symbologies at one time.
- Enter prefixes and suffixes in the order in which you want them to appear on the output.
- When setting up for specific symbologies (as opposed to all symbologies), the specific symbology ID value counts as an added prefix or suffix character.
- The maximum size of a prefix or suffix configuration is 32 characters, which includes header information.

### To Add a Prefix or Suffix

1. Scan the **Add Prefix** or **Add Suffix** symbol.
2. Determine the 2 digit Hex value from the [Symbology Chart](#) (page 5-122) for the symbology to which you want to apply the prefix or suffix. For example, for Code 128, Code ID is “j” and Hex ID is “6A”.
3. Scan the 2 hex digits from the [Programming Chart](#) (page 5-132) or scan **9, 9** for all symbologies.
4. Determine the hex value from the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for the prefix or suffix you wish to enter.
5. Scan the 2 digit hex value from the [Programming Chart](#) (page 5-132)
6. Repeat Steps 4 and 5 for every prefix or suffix character.
7. To add the Code I.D., scan **5, C, 8, 0**. To add AIM I.D., scan **5, C, 8, 1**. To add a backslash (\), scan **5, C, 5, C**.
8. Scan **Save** to exit and save, or scan **Discard** to exit without saving.

*Note: To add a backslash (\) as in Step 7, you must scan 5C twice – once to create the leading backslash and then to create the backslash itself.*

Repeat Steps 1-6 to add a prefix or suffix for another symbology.

---

**Example:** Add a Suffix to a specific symbology

To send a CR (carriage return) Suffix for U.P.C. only:

1. Scan Add Suffix.
2. Determine the 2 digit hex value from the [Symbology Chart](#) (page 5-122) for U.P.C.
3. Scan **6, 3** from the [Programming Chart](#) (page 5-132).
4. Determine the hex value from the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for the CR (carriage return).
5. Scan **0, D** from the [Programming Chart](#) (page 5-132).
6. Scan Save, or scan Discard to exit without saving.

### **To Clear One or All Prefixes or Suffixes**

You can clear a single prefix or suffix, or clear all prefixes/suffixes for a symbology. If you have been entering prefixes and suffixes for single symbologies, you can use **Clear One Prefix (Suffix)** to delete a specific character from a symbology. When you **Clear All Prefixes (Suffixes)**, all the prefixes or suffixes for a symbology are deleted.

1. Scan the Clear One Prefix or Clear One Suffix symbol.
2. Determine the 2 digit Hex value from the [Symbology Chart](#) (page 5-122) for the symbology from which you want to clear the prefix or suffix.
3. Scan the 2 digit hex value from the [Programming Chart](#) (page 5-132) or scan **9, 9** for all symbologies.

Your change is automatically saved.

### **To Add a Carriage Return Suffix to All Symbologies**

Scan the following bar code if you wish to add a carriage return suffix to all symbologies at once. This action first clears all current suffixes, then programs a carriage return suffix for all symbologies.

Add CR Suffix All Symbologies

### **Prefix Selections**

Bar Code Decoder Engine = N43XX and N73XX

Default = Clear All Prefixes

Add Prefix

---

Clear One Prefix

\* Clear All Prefixes

**Suffix Selections**

*Bar Code Decoder Engine = N43XX and N73XX*

Default = Clear All Suffixes

Add Suffix

Clear One Suffix

\* Clear All Suffixes

---

## **Read Time-Out**

*Bar Code Decoder Engine = N43XX and N73XX*

Use this selection to set a time-out (in milliseconds) of the engine's external trigger when using serial commands to trigger the scanner. Once the engine has timed out, you can activate the engine either by the external trigger or using a serial trigger command. After scanning the **Read Time-Out** bar code, set the time-out duration (from 0-300,000 milliseconds) by scanning digits on [0 - 9](#) (page 5-132) then scan Save on [Save, Discard, Reset](#) (page 5-135). *Default = 3,000 ms.*

Read Time-Out

---

## **Reread Delay**

*Bar Code Decoder Engine = N43XX and N73XX*

This sets the time period before the scanner can read the same bar code a second time. Setting a reread delay protects against accidental rereads of the same bar code. Longer delays are effective in minimizing accidental rereads. Use shorter delays in applications where repetitive bar code scanning is required. *Default = Medium.*

Short (500 ms)

\* Medium (750 ms)

Long (1000 ms)

Extra Long (2000 ms)

---

## **Show Data Format**

*Bar Code Decoder Engine = N43XX and N73XX*

Scan the bar code below to show current data format settings.

## **Show Software Revision**

Scan the bar code below to output the current software revision, unit serial number, and other product information.

## **User-Specified Reread Delay**

*Bar Code Decoder Engine = N43XX and N73XX*

If you want to set your own length for the reread delay, scan the following bar code, then set the delay (from 0-30,000 milliseconds) by scanning digits on [0 - 9](#) (page 5-132) then scan Save on [Save](#), [Discard](#), [Reset](#) (page 5-135).

User-Specified Reread Delay

---

## Scanner Parameters - Symbologies

### All Symbologies

*Bar Code Decoder Engine = N43XX and N73XX*

If you want to decode all the symbologies allowable for your scanner, scan the **All Symbologies On** code. If on the other hand, you want to decode only a particular symbology, scan **All Symbologies Off** followed by the On symbol for that particular symbology.

All Symbologies On

All Symbologies Off

### Message Length Description

*Bar Code Decoder Engine = N43XX and N73XX*

You are able to set the valid reading length of some of the bar code symbologies. If the data length of the scanned bar code doesn't match the valid reading length, the scanner will issue an error tone. You may wish to set the same value for minimum and maximum length to force the scanner to read fixed length bar code data. This helps reduce the chances of a misread.

**Example:** Decode only those bar codes with a count of 9-20 characters.

Min. length = 09

Max. length = 20

**Example:** Decode only those bar codes with a count of 15 characters.

Min. length = 15

Max. length = 15

For a value other than the minimum and maximum message length defaults, scan the bar codes included in the explanation of the symbology, then scan the digit value of the message length and then scan digits on the **0 - 9** (page 5-132) then scan Save on **Save, Discard, Reset** (page 5-135). The minimum and maximum lengths and the defaults are included with the respective symbologies.

---

## **Codabar**

*Bar Code Decoder Engine = N43XX and N73XX*

Scan the bar code below to set all Codabar parameters to their default value.

### **Codabar On/Off**

On

\* Off

### **Codabar Start/Stop Characters**

Start/Stop characters identify the leading and trailing ends of the bar code. You may either transmit, or not transmit Start/Stop characters. *Default = Don't Transmit.*

Transmit

\* Don't Transmit

---

### **Codabar Check Character**

Codabar check characters are created using different “modulos.” You can program the scanner to read only Codabar bar codes with Modulo 16, Modulo 7 CD, or CLSI check characters. *Default = No Check Character.*

**No Check Character** indicates that the scanner reads and transmits bar code data with or without a check character.

When Check Character is set to **Validate and Transmit**, the scanner will only read Codabar bar codes printed with a check character, and will transmit this character at the end of the scanned data.

When Check Character is set to **Validate, but Don't Transmit**, the unit will only read Codabar bar codes printed **with** a check character, but will not transmit the check character with the scanned data.

\* No Check Character

Validate Modulo 16, but Don't Transmit

Validate Modulo 16 and Transmit

Validate Modulo 7 CD, but Don't Transmit

---

Validate Modulo 7 CD and Transmit

Validate CLSI, but Don't Transmit

CBRCK25.

Validate CLSI and Transmit

CBRCK26.

---

### **Codabar Concatenation**

Codabar supports symbol concatenation. When you enable concatenation, the scanner looks for a Codabar symbol having a “D” start character, adjacent to a symbol having a “D” stop character. In this case the two messages are concatenated into one with the “D” characters omitted.

Select **Require** to prevent the scanner from decoding a single “D” Codabar symbol without its companion. This selection has no effect on Codabar symbols without Stop/Start D characters.

On

\* Off

Require

---

### **Concatenation Timeout**

When searching for bar codes during concatenation, you may wish to set a delay used to find the next bar code. Set the length (in milliseconds) for this delay by scanning the following bar code, then setting the timeout (from 1-65535 milliseconds) by scanning digits on **0 - 9** (page 5-132) then scan Save on **Save, Discard, Reset** (page 5-135). *Default = 750.*

Concatenation Timeout

### **Codabar Redundancy**

If you are encountering errors when reading Codabar bar codes, you may want to adjust the redundancy count. Redundancy adjusts the number of times a bar code is decoded before transmission, which may reduce the number of errors. Note that the higher the redundancy count, the longer it will take to decode the bar code. To adjust the redundancy, scan the following **Codabar Redundancy** bar code, then scan a redundancy count between 0 and 10 on **0 - 9** (page 5-132) then scan Save on **Save, Discard, Reset** (page 5-135). *Default = 0.*

Codabar Redundancy

### **Codabar Message Length**

Scan the following bar codes to change the message length. Refer to [Message Length Description](#) (page 5-20) for additional information. Minimum and Maximum lengths = 1-80. *Minimum Default = 3, Maximum Default = 80.*

Minimum Message Length

Maximum Message Length

---

## Code 39

Bar Code Decoder Engine = N43XX and N73XX

Scan the bar code below to set all Code 39 parameters to their default value.

### Code 39 On/Off

\* On

Off

### Code 39 Start/Stop Characters

Start/Stop characters identify the leading and trailing ends of the bar code. You may either transmit, or not transmit Start/Stop characters. *Default = Don't Transmit.*

Transmit

\* Don't Transmit

---

### **Code 39 Check Character**

**No Check Character** indicates that the scanner reads and transmits bar code data with or without a check character.

When Check Character is set to **Validate, but Don't Transmit**, the unit only reads Code 39 bar codes printed with a check character, but will not transmit the check character with the scanned data.

When Check Character is set to **Validate and Transmit**, the scanner only reads Code 39 bar codes printed with a check character, and will transmit this character at the end of the scanned data.

Default = No Check Character.

\* No Check Character

Validate , but Don't Transmit

Validate and Transmit

---

### **Code 39 Redundancy**

If you are encountering errors when reading Code 39 bar codes, you may want to adjust the redundancy count. Redundancy adjusts the number of times a bar code is decoded before transmission, which may reduce the number of errors. Note that the higher the redundancy count, the longer it will take to decode the bar code. To adjust the redundancy, scan the Code 39 Redundancy bar code below, then scan a redundancy count between 0 and 10 on [0 - 9](#) (page 5-132) then scan Save on [Save, Discard, Reset](#) (page 5-135). *Default = 0.*

Code 39 Redundancy

### **Code 39 Message Length**

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 5-20) for additional information. *Minimum and Maximum lengths = 1-80. Minimum Default = 2, Maximum Default = 80.*

Minimum Message Length

Maximum Message Length

### **Code 32 Pharmaceutical (PARAF)**

Code 32 Pharmaceutical is a form of the Code 39 symbology used by Italian pharmacies. This symbology is also known as PARAF. Default = Off.

On

\* Off

### Code 39 Full ASCII

If Code 39 Full ASCII decoding is enabled, certain character pairs within the bar code symbol will be interpreted as a single character. For example: \$V will be decoded as the ASCII character SYN, and /C will be decoded as the ASCII character #. *Default = Off.*

Character pairs /M and /N decode as a minus sign and period respectively. Character pairs /P through /Y decode as 0 through 9.

Full ASCII On

\* Full ASCII Off Full ASCII On

## **UPC-A**

*Bar Code Decoder Engine = N43XX and N73XX*

Scan the bar code below to set all UPC-A parameters to their default value.

### **UPC-A On/Off**

*Default = On.*

\* On

Off

---

### **UPC-A Number System and Check Digit**

UPC-A sample showing the number system and check digit:

### **UPC-A Number System**

The numeric system digit of a U.P.C. symbol is normally transmitted at the beginning of the scanned data, but the scanner can be programmed so it will not transmit it. *Default = On.*

\* On

Off

---

### **UPC-A Check Digit**

This selection allows you to specify whether the check digit should be transmitted at the end of the scanned data or not. *Default = On.*

\* On

Off

---

**UPC-A Addenda**

This selection adds 2 or 5 digits to the end of all scanned UPC-A data. *Default = Off for both 2 Digit and 5 Digit Addenda.*

2 Digit Addenda On

\* 2 Digit Addenda Off

5 Digit Addenda On

\* 5 Digit Addenda Off

---

### ***UPC-A Addenda Required***

When **Required** is scanned, the scanner will only read UPC-A bar codes that have addenda. You must then turn on a [UPC-A Addenda](#) (page 5-62). *Default = Not Required.*

Required

\* Not Required

### ***UPC-A Addenda Timeout***

You can set a time during which the scanner looks for an addenda. If an addenda is not found within this time period, the data can be either transmitted or discarded, based on the setting you are using for UPC-A Addenda Required. Set the length (in milliseconds) for this timeout by scanning the bar code below, then setting the timeout (from 0- 65535 milliseconds) by scanning digits on [0 - 9](#) (page 5-132) then scan Save on [Save, Discard, Reset](#) (page 5-135). *Default = 100.*

*Note: The Addenda Timeout setting is applied to all addenda and coupon code searches*

Addenda Timeout

---

### **UPC-A Addenda Separator**

When this feature is on, there is a space between the data from the bar code and the data from the addenda. When turned off, there is no space. *Default = Off.*

On

\* Off

### **UPC-A Redundancy**

If you are encountering errors when reading UPC-A bar codes, you may want to adjust the redundancy count. Redundancy adjusts the number of times a bar code is decoded before transmission, which may reduce the number of errors. Note that the higher the redundancy count, the longer it will take to decode the bar code. To adjust the redundancy, scan the **UPC-A Redundancy** bar code below, then scan a redundancy count between 0 and 10 on **0 - 9** (page 5-132) then scan Save on [Save](#), [Discard](#), [Reset](#) (page 5-135). *Default = 0.*

UPC-A Redundancy

---

### ***UPC-A/EAN-13 with Extended Coupon Code***

Use the following codes to enable or disable UPC-A and EAN-13 with Extended Coupon Code. When left on the default setting (**Off**), the scanner treats Coupon Codes and Extended Coupon Codes as single bar codes.

If you scan the **Allow Concatenation** code, when the scanner sees the coupon code and the extended coupon code in a single scan, it transmits both as separate symbologies. Otherwise, it transmits the first coupon code it reads.

If you scan the **Require Concatenation** code, the scanner must see and read the coupon code and extended coupon code in a single read to transmit the data. No data is output unless both codes are read.

*Default = Off.*

\* Off

CPNENA0.

Allow Concatenation

CPNENA1.

Require Concatenation

CPNENA2.

---

### **UPC-A Number System 4 Addenda Required**

This setting programs the scanner to require a coupon code only on UPC-A bar codes that begin with a “4.” The following settings can be programmed:

**Require Coupon Code:** All UPC-A bar codes that begin with a “4” must have a coupon code. The UPC-A bar code with the coupon code is then transmitted as a single, concatenated bar code. If a coupon code is not found within the [UPC-A Addenda Timeout](#) (page 5-63) period, the UPC-A bar code is discarded.

**Don't Require Coupon Code:** If you have selected Require Coupon Code, and you want to disable this feature, scan Don't Require Coupon Code. UPC-A bar codes are transmitted, depending on the setting you are using for [UPC-A/ EAN-13 with Extended Coupon Code](#) (page 5-65).

*Default = Don't Require Coupon Code.*

\* Don't Require Coupon Code

Require Coupon Code

---

### **UPC-A Number System 5 Addenda Required**

This setting programs the scanner to require any combination of a coupon code, a 2 digit addenda, or a 5 digit addenda on UPC-A bar codes that begin with a “5.” The following settings can be programmed:

**Require Coupon Code/Addenda:** All UPC-A bar codes that begin with a “5” must have a coupon code, a 2 digit addenda, a 5 digit addenda, or a combination of these addenda. The UPC-A bar code with the coupon code and/or addenda is then transmitted as a single, concatenated bar code. If a coupon code and/or required addenda is not found within the [UPC-A Addenda Timeout](#) (page 5-63) period, the UPC-A bar code is discarded.

**Don't Require Coupon Code/Addenda:** If you have selected **Require Coupon Code/Addenda**, and you want to disable this feature, scan **Don't Require Coupon Code/Addenda**. UPC-A bar codes are transmitted, depending on the setting you are using for [UPC-A/EAN-13 with Extended Coupon Code](#) (page 5-65).

*Default = Don't Require Coupon Code/Addenda.*

## UPC-E0

Bar Code Decoder Engine = N43XX and N73XX

Scan the bar code below to set all UPC-E0 parameters to their default value.

### UPC-E0 On/Off

Most U.P.C. bar codes lead with the 0 number system. To read these codes, use the **UPC-E0 On** selection. If you need to read codes that lead with the 1 number system, use [EAN/JAN-13 On/Off](#) (page 5-75). *Default = On.*

\* UPC-E0 On

UPC-E0 Off

### UPC-E0 Expand

UPC-E0 Expand expands the UPC-E code to the 12 digit, UPC-A format. *Default = Off.*

On

\* Off

---

### **UPC-E0 Number System and Check Digit**

UPC-E0 sample showing the number system and check digit:

### **UPC-E0 Number System**

The numeric system digit of a UPC-A symbol is normally transmitted at the beginning of scanned data. When using UPC-E Expand, the unit can be programmed so it will not transmit it. *Default = On.*

\* On

Off

---

### **UPC-E0 Check Digit**

Check Digit specifies whether the check digit should be transmitted at the end of the scanned data or not. *Default = Off.*

On

\* Off

### **UPC-E0 Leading Zero**

This feature allows the transmission of a leading zero (0) at the beginning of scanned data. To prevent transmission, scan **Off**. *Default = Off.*

On

\* Off

---

**UPC-E0 Addenda**

This selection adds 2 or 5 digits to the end of all scanned UPC-E data. *Default = Off for both 2 Digit and 5 Digit Addenda.*

2 Digit Addenda On

\* 2 Digit Addenda Off

5 Digit Addenda On

\* 5 Digit Addenda Off

---

### **UPC-E0 Addenda Required**

When **Required** is scanned, the scanner will only read UPC-E bar codes that have addenda. *Default = Not Required.*

Required

\* Not Required

### **UPC-E0 Addenda Timeout**

You can set a time during which the scanner looks for an addenda. If an addenda is not found within this time period, the data can be either transmitted or discarded, based on the setting you are using for [UPC-E0 Addenda Required](#) (page 5-73). Set the length (in milliseconds) for this timeout by scanning the bar code below, then setting the timeout (from 0- 65535 milliseconds) by scanning digits on [0 - 9](#) (page 5-132) then scan Save on [Save, Discard, Reset](#) (page 5-135). *Default = 100.*

*Note: The Addenda Timeout setting is applied to all addenda and coupon code searches*

Addenda Timeout

---

### **UPC-E0 Addenda Separator**

When this feature is on, there is a space between the data from the bar code and the data from the addenda. When turned off, there is no space. *Default = Off.*

On

\* Off

### **UPC-E0 Redundancy**

If you are encountering errors when reading UPC-E0 bar codes, you may want to adjust the redundancy count. Redundancy adjusts the number of times a bar code is decoded before transmission, which may reduce the number of errors. Note that the higher the redundancy count, the longer it will take to decode the bar code. To adjust the redundancy, scan the **UPC-E0 Redundancy** bar code below, then scan a redundancy count between 0 and 10 on **0 - 9** (page 5-132) then scan Save on [Save](#), [Discard](#), [Reset](#) (page 5-135). *Default = 1.*

UPC-E0 Redundancy

---

## **EAN/JAN-13**

*Bar Code Decoder Engine = N43XX and N73XX*

Scan the bar code below to set all EAN/JAN-13 parameters to their default value.

### **EAN/JAN-13 On/Off**

*Default = On*

\* On

Off

### **EAN/JAN-13 Check Digit**

This selection allows you to specify whether the check digit should be transmitted at the end of the scanned data or not. *Default = On.*

\* On

Off

---

***EAN/JAN-13 Addenda***

This selection adds 2 or 5 digits to the end of all scanned EAN/JAN-13 data. *Default = Off for both 2 Digit and 5 Digit Addenda.*

2 Digit Addenda On

\* 2 Digit Addenda Off

5 Digit Addenda On

\* 5 Digit Addenda Off

---

***EAN/JAN-13 Addenda Required***

When **Required** is scanned, the scanner will only read EAN/JAN-13 bar codes that have addenda. *Default = Not Required.*

Required

\* Not Required

---

### ***EAN-13 Beginning with 2 Addenda Required***

This setting programs the scanner to require a 2 digit addenda only on EAN-13 bar codes that begin with a “2.” The following settings can be programmed:

**Require 2 Digit Addenda:** All EAN-13 bar codes that begin with a “2” must have a 2 digit addendum. The EAN-13 bar code with the 2 digit addendum is then transmitted as a single, concatenated bar code. If a 2 digit addendum is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

*Note: If you are using [EAN-13 Beginning with 290 Addenda Required](#) (page 5-79), that setting will take precedence over this one.*

**Don’t Require 2 Digit Addenda:** If you have selected Require 2 Digit Addenda, and you want to disable this feature, scan Don’t Require 2 Digit Addenda. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don’t Require 2 Digit Addenda.*

\* Don’t Require 2 Digit Addenda

Require 2 Digit Addenda

---

### ***EAN-13 Beginning with 290 Addenda Required***

This setting programs the scanner to require a 5 digit addenda only on EAN-13 bar codes that begin with "290." The following settings can be programmed:

**Require 5 Digit Addenda:** All EAN-13 bar codes that begin with "290" must have a 5 digit addendum. The EAN-13 bar code with the 5 digit addendum is then transmitted as a single, concatenated bar code. If a 5 digit addendum is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

*Note: If you are using [EAN-13 Beginning with 2 Addenda Required](#) (page 5-78), this setting will take precedence.*

**Don't Require 5 Digit Addenda:** If you have selected Require 5 Digit Addenda, and you want to disable this feature, scan Don't Require 5 Digit Addenda. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don't Require 5 Digit Addenda.*

\* Don't Require 5 Digit Addenda

Require 5 Digit Addenda

---

### ***EAN-13 Beginning with 378/379 Addenda Required***

This setting programs the scanner to require any combination of a 2 digit addenda or a 5 digit addenda on EAN-13 bar codes that begin with a “378” or “379.” The following settings can be programmed:

**Require Addenda:** All EAN-13 bar codes that begin with a “378” or “379” must have a 2 digit addenda, a 5 digit addenda, or a combination of these addenda. The EAN-13 bar code with the addenda is then transmitted as a single, concatenated bar code. If the required addenda is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

**Don’t Require Addenda:** If you have selected Require Addenda, and you want to disable this feature, scan **Don’t Require Addenda**. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don’t Require Addenda.*

\* Don’t Require Addenda

Require 2 Digit Addenda

Require 5 Digit Addenda

Require 2 or 5 Digit Addenda

---

### ***EAN-13 Beginning with 414/419 Addenda Required***

This setting programs the scanner to require any combination of a 2 digit addenda or a 5 digit addenda on EAN-13 bar codes that begin with a “414” or “419.” The following settings can be programmed:

**Require Addenda:** All EAN-13 bar codes that begin with a “414” or “419” must have a 2 digit addenda, a 5 digit addenda, or a combination of these addenda. The EAN-13 bar code with the addenda is then transmitted as a single, concatenated bar code. If the required addenda is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

**Don’t Require Addenda:** If you have selected **Require Addenda**, and you want to disable this feature, scan **Don’t Require Addenda**. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

### ***EAN-13 Beginning with 434/439 Addenda Required***

This setting programs the scanner to require any combination of a 2 digit addenda or a 5 digit addenda on EAN-13 bar codes that begin with a “434” or “439.” The following settings can be programmed:

**Require Addenda:** All EAN-13 bar codes that begin with a “434” or “439” must have a 2 digit addenda, a 5 digit addenda, or a combination of these addenda. The EAN-13 bar code with the addenda is then transmitted as a single, concatenated bar code. If the required addenda is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

**Don't Require Addenda:** If you have selected Require Addenda, and you want to disable this feature, scan Don't Require Addenda. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don't Require Addenda.*

\* Don't Require Addenda

Require 2 Digit Addenda

Require 5 Digit Addenda

Require 2 or 5 Digit Addenda

---

### ***EAN-13 Beginning with 977 Addenda Required***

This setting programs the scanner to require a 2 digit addenda only on EAN-13 bar codes that begin with "977." The following settings can be programmed:

**Require 2 Digit Addenda:** All EAN-13 bar codes that begin with "977" must have a 2 digit addendum. The EAN-13 bar code with the 2 digit addendum is then transmitted as a single, concatenated bar code. If a 2 digit addendum is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

**Don't Require 2 Digit Addenda:** If you have selected Require 2 Digit Addenda, and you want to disable this feature, scan Don't Require 2 Digit Addenda. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don't Require 2 Digit Addenda.*

\* Don't Require 2 Digit Addenda

Require 2 Digit Addenda

---

### ***EAN-13 Beginning with 978 Addenda Required***

This setting programs the scanner to require a 5 digit addenda only on EAN-13 bar codes that begin with "978." The following settings can be programmed:

**Require 5 Digit Addenda:** All EAN-13 bar codes that begin with "978" must have a 5 digit addendum. The EAN-13 bar code with the 5 digit addendum is then transmitted as a single, concatenated bar code. If a 5 digit addendum is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

**Don't Require 5 Digit Addenda:** If you have selected Require 5 Digit Addenda, and you want to disable this feature, scan Don't Require 5 Digit Addenda. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don't Require 5 Digit Addenda.*

\* Don't Require 5 Digit Addenda

Require 5 Digit Addenda

---

### ***EAN-13 Beginning with 979 Addenda Required***

This setting programs the scanner to require a 5 digit addenda only on EAN-13 bar codes that begin with “979.” The following settings can be programmed:

**Require 5 Digit Addenda:** All EAN-13 bar codes that begin with “979” must have a 5 digit addendum. The EAN-13 bar code with the 5 digit addendum is then transmitted as a single, concatenated bar code. If a 5 digit addendum is not found within the Addenda Timeout period, the EAN-13 bar code is discarded.

**Don’t Require 5 Digit Addenda:** If you have selected Require 5 Digit Addenda, and you want to disable this feature, scan Don’t Require 5 Digit Addenda. EAN-13 bar codes are transmitted, depending on the setting you are using for [EAN/JAN-13 Addenda Required](#) (page 5-77).

*Default = Don’t Require 5 Digit Addenda.*

\* Don’t Require 5 Digit Addenda

Require 5 Digit Addenda

---

### ***EAN/JAN-13 Addenda Timeout***

You can set a time during which the scanner looks for an addenda. If an addenda is not found within this time period, the data can be either transmitted or discarded, based on the setting you are using for EAN/JAN-13 Addenda Required. Set the length (in milliseconds) for this timeout by scanning the bar code below, then setting the timeout (from 0-65535 milliseconds) by scanning digits on **0 - 9** (page 5-132) then scan Save on [Save](#), [Discard](#), [Reset](#) (page 5-135).. *Default = 100.*

*Note: The Addenda Timeout setting is applied to all addenda and coupon code searches.*

Addenda Timeout

### ***EAN/JAN-13 Addenda Separator***

When this feature is On, there is a space between the data from the bar code and the data from the addenda. When turned **Off**, there is no space. *Default = Off.*

*Note: If you want to enable or disable EAN13 with Extended Coupon Code, refer to [UPC-A/EAN-13 with Extended Coupon Code](#) (page 5-65).*

On

\* Off

---

### ***EAN/JAN-13 Redundancy***

If you are encountering errors when reading EAN/JAN-13 bar codes, you may want to adjust the redundancy count. Redundancy adjusts the number of times a bar code is decoded before transmission, which may reduce the number of errors. Note that the higher the redundancy count, the longer it will take to decode the bar code. To adjust the redundancy, scan the **EAN/JAN-13 Redundancy** bar code below, then scan a redundancy count between 0 and 10 on **0 - 9** (page 5-132) then scan Save on **Save, Discard, Reset** (page 5-135).. *Default = 0.*

EAN/JAN-13 Redundancy

### ***ISBN Translate***

ISBNs are printed on books using the EAN-13 bar code symbology. To translate EAN-13 Bookland symbols into their equivalent ISBN number format, scan the **On** bar code below. *Default = Off.*

On

\* Off

---

### **Convert ISBN to 13-Digit**

When translating EAN-13 codes to the ISBN format, you can convert the bar code to a 13 digit format by scanning the **Convert to 13-Digit On** bar code below. *Default = Convert to 13-Digit Off.*

Convert to 13-Digit On

E13I131.

\* Convert to 13-Digit Off

E13I130.

### **ISBN Reformat**

In normal use, the first two or three digits of an EAN-13 bar code identify the country of origin. The country prefixes are 978 and 979. To reformat ISBN codes so the country prefix is dropped out, scan the **Reformat On** bar code below. *Default = Reformat Off.*

Reformat On

E13IBR1.

\* Reformat Off

E13IBR0.

---

### **ISSN Translate**

When **On** is scanned, EAN-13 977 Bookland symbols are translated into their equivalent 8-digit ISSN number format. For example, 9770123456787 will be transmitted as 01234560. *Default = Off.*

On

\* Off

### **ISSN Reformat**

When **Reformat On** is scanned, EAN-13 977 Bookland symbols are translated into their equivalent 8-digit ISSN number format, with hyphens added to the output. For example, 9770123456787 will be transmitted as 0123-456-0. (You must first scan **ISSN Translate On** before scanning **Reformat On**.) *Default = Reformat Off.*

Reformat On

\* Reformat Off

### **Trioptic Code**

*Bar Code Decoder Engine = N43XX and N73XX*

Trioptic Code is used for labeling magnetic storage media. *Default = Off.*

On

\* Off

---

## GS1 Emulation

*Bar Code Decoder Engine = N43XX and N73XX*

The scanner can automatically format the output from any GS1 data carrier to emulate what would be encoded in an equivalent GS1-128 or GS1 DataBar symbol. GS1 data carriers include UPC-A and UPC-E, EAN-13 and EAN-8, ITF-14, GS1-128, and GS1-128 DataBar and GS1 Composites. (Any application that accepts GS1 data can be simplified since it only needs to recognize one data carrier type.)

If **GS1-128 Emulation** is scanned, all retail codes (U.P.C., UPC-E, EAN8, EAN13) are expanded out to 16 digits. If the AIM ID is enabled, the value will be the GS1-128 AIM ID, ]C1. See [Symbology Chart](#) (page 5-122).

If **GS1 DataBar Emulation** is scanned, all retail codes (U.P.C., UPC-E, EAN8, EAN13) are expanded out to 16 digits. If the AIM ID is enabled, the value will be the GS1-DataBar AIM ID, ]em . See [Symbology Chart](#) (page 5-122).

If **GS1 Code Expansion Off** is scanned, retail code expansion is disabled, and UPC-E expansion is controlled by the [UPC-E0 Expand](#) (page 5-69) setting. If the AIM ID is enabled, the value will be the GS1-128 AIM ID, ]C1. See [Symbology Chart](#) (page 5-122).

If **EAN8 to EAN13 Conversion** is scanned, all EAN8 bar codes are converted to EAN13 format.

*Default = GS1 Emulation Off.*

GS1-128 Emulation

GS1 DataBar Emulation

GS1 Code Expansion Off

\* GS1 Emulation Off

EANEMUO.

---

## Postal Codes

Bar Code Decoder Engine = N43XX and N73XX

The following lists linear postal codes. Any combination of linear postal code selections can be active at a time.

### China Post (Hong Kong 2 of 5)

Scan the bar code below to set all China Post (Hong Kong 2 of 5) parameters to their default value.

### China Post (Hong Kong 2 of 5) On/Off

On

\* Off

### China Post (Hong Kong 2 of 5) Redundancy

If you are encountering errors when reading China Post (Hong Kong 2 of 5) bar codes, you may want to adjust the redundancy count. Redundancy adjusts the number of times a bar code is decoded before transmission, which may reduce the number of errors. Note that the higher the redundancy count, the longer it will take to decode the bar code. To adjust the redundancy, scan the **China Post (Hong Kong 2 of 5) Redundancy** bar code below, then scan a redundancy count between 0 and 10 on **0 - 9** (page 5-132) then scan Save on **Save, Discard, Reset** (page 5-135). *Default = 0.*

China Post (Hong Kong 2 of 5)  
Redundancy

---

### **China Post (Hong Kong 2 of 5) Redundancy Message Length**

Scan the bar codes below to change the message length. Refer to [Message Length Description](#) (page 5-20) for additional information. Minimum and Maximum lengths = 1-80. *Minimum Default = 3, Maximum Default = 80.*

Minimum Message Length

Maximum Message Length

---

## Data Formatting

Bar Code Decoder Engine = N43XX and N73XX

### Data Format Editor Introduction

You may use the Data Format Editor to change the scanner's output. For example, you can use the Data Format Editor to insert characters at certain points in bar code data as it is scanned. The selections in the following pages are used only if you wish to alter the output. *Default Data Format setting = None.*

Normally, when you scan a bar code, it gets outputted automatically; however when you create a format, you must use a "send" command, see [Send Commands](#) (page 5-112), within the format program to output data.

Multiple formats may be programmed into the scanner. They are stacked in the order in which they are entered. However, the following list presents the order in which formats are applied:

1. Specific Terminal ID, Actual Code ID, Actual Length
2. Specific Terminal ID, Actual Code ID, Universal Length
3. Specific Terminal ID, Universal Code ID, Actual Length
4. Specific Terminal ID, Universal Code ID, Universal Length
5. Universal Terminal ID, Actual Code ID, Actual Length
6. Universal Terminal ID, Actual Code ID, Universal Length
7. Universal Terminal ID, Universal Code ID, Actual Length
8. Universal Terminal ID, Universal Code ID, Universal Length

The maximum size of a data format configuration is 256 bytes, which includes header information. No format can contain more than 50 bytes.

If you have changed data format settings, and wish to clear all formats and return to the factory defaults, scan the following **Default Data Format** code.

### To Add a Data Format

**Step 1.** Scan the **Enter Data Format** symbol (below).

**Step 2. Select Primary/Alternate Format**

Determine if this will be your primary data format, or one of 3 alternate formats. This allows you to save a total of 4 different data formats. To program your primary format, scan 0 on 0 - 9 (page 5-132). If you are programming an alternate format, scan 1, 2, or 3, depending on which alternate format you are programming. See [Primary/Alternate Data Formats](#) (page 5-117) for further information.)

**Step 3. Terminal Type**

Refer to [Terminal ID Table](#) (page 5-111) and locate the Terminal ID number for your PC. Scan three numeric bar codes on 0 - 9 (page 5-132) to program the scanner for your terminal ID (you must enter 3 digits). For example, scan 0 0 3 for an AT wedge.

*Note: The wildcard for all terminal types is 099.*

**Step 4. Code I.D.**

In the [Symbology Chart](#) (page 5-122) find the symbology to which you want to apply the data format. Locate the Hex value for that symbology and scan the 2 digit hex value from the [Programming Chart](#) (page 5-132).

**Step 5. Length**

Specify what length (up to 9999 characters) of data will be acceptable for this symbology. Scan the four digit data length from the [Programming Chart](#) (page 5-132).

---

*Note: 50 characters is entered as 0050. 9999 is a universal number, indicating all lengths.*

**Step 6. Editor Commands**

Refer to [Terminal ID Table](#) (page 5-111). Scan the symbols that represent the command you want to enter. 94 alphanumeric characters may be entered for each symbology data format.

**Step 7.** Scan **Save** to save your data format, or Discard to exit without saving your changes.

Enter Data Format

DFMBK3.

Save

MNUSAV.

Discard

MNUABT.

---

## **Other Programming Selections**

### **Clear One Data Format**

This deletes one data format for one symbology. If you are clearing the primary format, scan 0 from the 0 - 9 (page 5-132). If you are clearing an alternate format, scan 1, 2, or 3, depending on the format you are clearing. Scan the Terminal Type and Code ID, See [Symbology Chart](#) (page 5-122), and the bar code data length for the specific data format that you want to delete. All other formats remain unaffected.

### **Clear all Data Formats**

This clears all data formats.

**Save** to exit and save your data format changes.

**Discard** to exit without saving any data format changes.

Clear One Data Format

Clear All Data Formats

Save

Discard

---

**Terminal ID Table**

<b>Terminal</b>	<b>Model(s)</b>	<b>Terminal ID</b>
IBM	PC/AT and compatibles	003
	PS2 Keyboard	002
	USB SurePOS Handheld Scanner	128
	USB SurePOS Tabletop Scanner	129
RS232	True	000
	TTL	000

USB	Serial	130
	PC Keyboard	124
	Mac Keyboard	125
	Japanese Keyboard (PC)	134
	HID POS	131

---

## **Data Format Editor Commands**

### **Send Commands**

#### **Send all characters**

F1 Include in the output message all of the characters from the input message, starting from current cursor position, followed by an insert character. *Syntax = F1xx* where xx stands for the insert character's hex value for its ASCII code.

Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

#### **Send a number of characters**

F2 Include in the output message a number of characters followed by an insert character. Start from the current cursor position and continue for "nn" characters or through the last character in the input message, followed by character "xx." *Syntax = F2nxx* where nn stands for the numeric value (00-99) for the number of characters, and xx stands for the insert character's hex value for its ASCII code.

Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

#### **Send all characters up to a particular character**

F3 Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the search character "ss," followed by an insert character. The cursor is moved forward to the "ss" character. *Syntax = F3ssxx* where ss stands for the search character's hex value for its ASCII code, and xx stands for the insert character's hex value for its ASCII code.

Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

#### **Send all but the last characters**

E9 Include in the output message all but the last "nn" characters, starting from the current cursor position. The cursor is moved forward to one position past the last input message character included. *Syntax = E9nn* where nn stands for the numeric value (00-99) for the number of characters that will not be sent at the end of the message.

#### **Insert a character multiple times**

F4 Insert the name of the bar code's symbology in the output message, without moving the cursor. Only symbologies with a Honeywell ID are included (see Symbology Chart).

Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

#### **Insert symbology name**

B3 Insert the name of the bar code's symbology in the output message, without moving the cursor. Only symbologies with a Honeywell ID are included (see Symbology Chart).

Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

#### **Insert bar code length**

B4 Insert the bar code's length in the output message, without moving the cursor. The length is expressed as a numeric string and does not include leading zeroes.

### **Move Commands**

#### **Move the cursor forward a number of characters**

F5 Move the cursor ahead "nn" characters from current cursor position. *Syntax = F5nn* where nn is the numeric value (00-99) for the number of characters the cursor should be moved ahead.

#### **Move the cursor backward a number of characters**

F6 Move the cursor back "nn" characters from current cursor position. *Syntax = F6nn* where nn is the numeric value (00-99) for the number of characters the cursor should be moved back.

#### **Move the cursor to the beginning**

F7 Move the cursor to the first character in the input message. *Syntax = F7.*

#### **Move the cursor to the end**

EA Move the cursor to the last character in the input message. *Syntax = EA.*

---

## **Search Commands**

### **Search forward for a character**

- F8 Search the input message forward for “xx” character from the current cursor position, leaving the cursor pointing to the “xx” character. *Syntax = F8xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

### **Search backward for a character**

- F9 Search the input message backward for “xx” character from the current cursor position, leaving the cursor pointing to the “xx” character. *Syntax = F9xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

### **Search forward for a string**

- B0 Search forward for “s” string from the current cursor position, leaving cursor pointing to “s” string. *Syntax = B0nnnnS* where nnnn is the string length (up to 9999), and S consists of the ASCII hex value of each character in the match string. For example, B0000454657374 will search forward for the first occurrence of the 4 character string “Test.” Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

### **Search backward for a string**

- B1 Search backward for “s” string from the current cursor position, leaving cursor pointing to “s” string. *Syntax = B1nnnnS* where nnnn is the string length (up to 9999), and S consists of the ASCII hex value of each character in the match string. For example, B1000454657374 will search backward for the first occurrence of the 4 character string “Test.” Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

### **Search forward for a non-matching character**

- E6 Search the input message forward for the first non-“xx” character from the current cursor position, leaving the cursor pointing to the non-“xx” character. *Syntax = E6xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

### **Search backward for a non-matching character**

- E7 Search the input message backward for the first non-“xx” character from the current cursor position, leaving the cursor pointing to the non- “xx” character. *Syntax = E7xx* where xx stands for the search character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

## **Miscellaneous Commands**

### **Suppress characters**

- FB Suppress all occurrences of up to 15 different characters, starting at the current cursor position, as the cursor is advanced by other commands. When the FC command is encountered, the suppress function is terminated. The cursor is not moved by the FB command. *Syntax = FBnnxxyy . .zz* where nn is a count of the number of suppressed characters in the list, and xxyy .. zz is the list of characters to be suppressed.

### **Stop suppressing characters**

- FC Disables suppress filter and clear all suppressed characters. *Syntax = FC.*

### **Replace characters**

- E4 Replaces up to 15 characters in the output message, without moving the cursor. Replacement continues until the E5 command is encountered. *Syntax = E4nnxx<sub>1</sub>xx<sub>2</sub>yy<sub>1</sub>yy<sub>2</sub>...zz<sub>1</sub>zz<sub>2</sub>* where nn is the total count of the number of characters in the list (characters to be replaced plus replacement characters); xx<sub>1</sub> defines characters to be replaced and xx<sub>2</sub> defines replacement characters, continuing through zz<sub>1</sub> and zz<sub>2</sub>.

### **Stop replacing characters**

- E5 Terminates character replacement. *Syntax = E5.*

### **Compare characters**

---

FE Compare the character in the current cursor position to the character “xx.” If characters are equal, move the cursor forward one position. *Syntax = FExx* where xx stands for the comparison character’s hex value for its ASCII code. Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

**Compare string**

B2 Compare the string in the input message to the string “s.” If the strings are equal, move the cursor forward past the end of the string. *Syntax = B2nnnnS* where nnnn is the string length (up to 9999), and S consists of the ASCII hex value of each character in the match string. For example, B2000454657374 will compare the string at the current cursor position with the 4 character string “Test.”

Refer to the [ASCII Conversion Chart \(Code Page 1252\)](#) (page 5-119) for decimal, hex and character codes.

**Check for a number**

EC Check to make sure there is an ASCII number at the current cursor position. The format is aborted if the character is not numeric.

**Check for non-numeric character**

ED Check to make sure there is a non-numeric ASCII character at the current cursor position. The format is aborted if the character is numeric.

**Insert a delay**

EF Inserts a delay of up to 49,995 milliseconds (in multiples of 5), starting from the current cursor position. *Syntax = EFnnnn* where nnnn stands for the delay in 5ms increments, up to 9999. This command can only be used with keyboard wedge interfaces.

---

## Data Formatter

When Data Formatter is turned Off, the bar code data is output to the host as read, including prefixes and suffixes.

### Data Formatter Off

You may wish to require the data to conform to a data format you have created and saved. The following settings can be applied to your data format:

### Data Formatter On, Not Required, Keep Prefix/Suffix

Scanned data is modified according to your data format, and prefixes and suffixes are transmitted.

### Data Formatter On, Not Required, Drop Prefix/Suffix

Scanned data is modified according to your data format. If a data format is found for a particular symbol, those prefixes and suffixes are not transmitted.

### Data Format Required, Keep Prefix/Suffix

Scanned data is modified according to your data format, and prefixes and suffixes are transmitted. Any data that does not match your data format requirements generates an error tone and the data in that bar code is not transmitted. If you wish to process this type of bar code without generating an error tone, see [Data Format Non-Match Error Tone](#) (page 5-116).

### Data Format Required, Drop Prefix/Suffix

Scanned data is modified according to your data format. If a data format is found for a particular symbol, those prefixes and suffixes are not transmitted. Any data that does not match your data format requirements generates an error tone. If you wish to process this type of bar code without generating an error tone, see [Data Format Non-Match Error Tone](#) (page 5-116).

Choose one of the following options. *Default = Data Formatter On, Not Required, Keep Prefix/Suffix.*

\* Data Formatter On, Not Required, Keep Prefix/  
Suffix

Data Formatter On, Not Required, Drop Prefix/  
Suffix

---

Data Format Required, Keep Prefix/Suffix

Data Format Required, Drop Prefix/Suffix

### **Data Format Non-Match Error Tone**

When a bar code is encountered that doesn't match your required data format, the scanner normally generates an error tone. However, you may want to continue scanning bar codes without hearing the error tone. If you scan the Data Format Non-Match Error Tone Off bar code, data that doesn't conform to your data format is not transmitted, and no error tone will sound. If you wish to hear the error tone when a non-matching bar code is found, scan the Data Format Non-Match Error Tone On bar code. *Default = Data Format Non-Match Error Tone On.*

\* Data Format Non-Match Error Tone On

Data Format Non-Match Error Tone Off

---

### **Primary/Alternate Data Formats**

You can save up to four data formats, and switch between these formats. Your primary data format is saved under 0. Your other three formats are saved under 1, 2, and 3. To set your device to use one of these formats, scan one of the following bar codes.

Primary Data Format

Data Format 1

Data Format 2

Data Format 3

---

### **Single Scan Data Format Change**

You can also switch between data formats for a single scan. The next bar code is scanned using an alternate data format, then reverts to the format you have selected above (either Primary, 1, 2, or 3).

For example, you may have set your device to the data format you saved as Data Format 3. You can switch to Data Format 1 for a single button press by scanning the following **Single Scan-Data Format 1** bar code. The next bar code that is scanned uses Data Format 1, then reverts back to Data Format 3.

Single Scan-Primary Data Format

Single Scan-Data Format 1

Single Scan-Data Format 2

Single Scan-Data Format 3

## NX3XX Bar Codes Supported by Honeywell

Bar Code Decoder Engine = N43XX and N73XX

### Scanner Parameters - General

Selection	Setting <i>* Indicates default</i>	Serial Command <i># Indicates a numeric entry</i>
Reset Factory Defaults	Reset Factory Defaults	RESET
Set Custom Defaults	Set Custom Defaults	MNUCDF
Activate Custom Defaults	Activate Custom Defaults	DEFAULT
Aimer Delay	Aimer Delay Off	SCNDLY#####
Reread Delay	Short (500 ms)	DLYRRD500
	* Medium (750 ms)	DLYRRD750
	Long (1000 ms)	DLYRRD1000
	Extra Long (2000 ms)	DLYRRD2000
User Specified Reread Delay	Range 0 - 30,000 ms	DLYRRD#####
Centering	Centering On	DECWIN1
	* Centering Off	DECWIN0
	Left of Centering Window (* 40%)	DECLFT##
	Right of Centering Window (* 60%)	DECRGT##
Laser Scan Angle	48° Scan Angle	LASANG0
	35° Scan Angle	LASANG1
Read Time-Out	Range 0 - 300,000 ms * 3,000 ms	TRGSTO#####
Decode Security	* Low	PAPLS1
	Low/Medium	PAPLS2
	Medium/High	PAPLS3
	High	PAPLS4
Power Save Mode Timeout	Range 0-65535 seconds	PWRLPT#####
	* 600 seconds	PWRLPT600
Power Save Mode	Off	PWRMOD0
	Sleep Mode	PWRMOD1
	* Hibernate	PWRMOD2
Prefix/Suffix Selections	Add CR Suffix to All Symbologies	VSUF CR
Prefix	Add Prefix	PREBK2##
	Clear One Prefix	PRECL2
	* Clear All Prefixes	PRECA2
Suffix	Add Suffix	SUFBK2##
	Clear One Suffix	SUFCL2
	* Clear All Suffixes	SUFCA2

## Scanner Parameters - Symbologies

Selection	Setting <i>* Indicates default</i>	Serial Command <i># Indicates a numeric entry</i>
All Symbologies	All Symbologies Off	ALLENA0
	All Symbologies On	ALLENA1
Codabar	Default All Codabar Settings	CBRDFT
	* Off	CBRENA0
	On	CBRENA1
Codabar Start/Stop Char.	* Don't Transmit	CBRSSX0
	Transmit	CBRSSX1
Codabar Check Character	* No Check Character	CBRCK20
	Validate Modulo 16, But Don't Transmit	CBRCK21
	Validate Modulo 16, and Transmit	CBRCK22
	Validate Modulo 7 CD, But Don't Transmit	CBRCK23
	Validate Modulo 7 CD, and Transmit	CBRCK24
	Validate CLSI, But Don't Transmit	CBRCK25
	Validate CLSI, and Transmit	CBRCK26
Codabar Concatenation	Off	CBRCCT0
	*On	CBRCCT1
	Require	CBRCCT2
	Concatenation Timeout	DLYCCT
Codabar Redundancy	Range (0 - 10) * 0	CBRVOT##
Codabar Message Length	Minimum (1 - 80) * 3	CBRMIN##
	Maximum (1 - 80) *80	CBRMAX##
Code 39	Default All Code 39 Settings	C39DFT
	Off	C39ENA0

## **Save, Discard, Reset**

Save

Discard

Reset - This RESET\_  
code tells a cordless  
scanner to reset and  
reconnect to the base.

*Note: If you make an error while scanning the letters or digits (before scanning Save), scan Discard, scan the correct letters or digits, and scan **Save** again.*

# Symbol Laser Scanner

## Introduction

<b>Integrated Laser Engine</b>	MX3Plus	MX7	MX7 Tecton	MX8	MX9
--------------------------------	---------	-----	------------	-----	-----

This section's explanations and instructions are directed toward devices with an integrated Symbol SE955 or SE1524SE Laser Scanner engine. Please do not scan the bar codes in this section with any other bar code reader engine.

Scan engine manufacturers may offer more bar codes and options than are contained in this section. Please note that the bar codes in this section are only those supported by Honeywell and the mobile devices it manufactures or supports. If you need assistance when using the bar codes in this section with your Mobile Device, please contact [Technical Assistance](#) (page 8-1).

The MX8 will beep twice when a configuration bar code is successfully scanned.

An asterisk (\*) next to an option indicates the default setting.

### Bar Code Decoder Types

Bar code decoder engine types (for Honeywell equipment) covered in this section are:

- SE 955 <sup>1</sup> Integrated
- SE 1524ER <sup>2</sup> Integrated

**To change a parameter value:** Scan the appropriate bar code in this section. After Save, the new value replaces the standard default value in memory.

The following bar code symbologies are supported:

Symbology	Can be Decoded by ...
Chinese 2 of 5	SE 955 only
Codabar	SE 955 and SE1524
Code 11	SE 955 only
Code 128	SE 955 and SE1524
Code 39	SE 955 and SE1524
Code 93	SE 955 and SE1524
Discrete 2 of 5	SE 955 and SE1524
Interleaved 2 of 5	SE 955 and SE1524
MSI Plessey	SE 955 and SE1524
GS1 DataBar (RSS)	SE 955 and SE1524
GS1 Databar (RSS) and Composite Codes	SE 955 only
UPC/EAN	SE 955 and SE1524

1. Short Range Laser, SE955, Base Laser, and Ring Scanner  
 2. Multi-Range "LORAX" Laser, SE1524ER

---

## **Aiming Modes**

There are many aiming “modes” for laser bar code readers – aiming dots, aiming patterns, aim duration, etc. All aiming “modes” concern the length of time the beam is sent out, how wide the beam is and what happens when the timer expires. The terms are used interchangeably and may be confusing for the novice bar code reader user.

*Note: Decoding algorithms released by the bar code engine manufacturer often change upon each new release. Programming parameters that were available at one release may not be available upon a later software release. Honeywell supports the programming bar codes for the specific bar code reader engines in this guide only.*

### **SE1524 Scan Engine**

The SE1524 Standard scanners can have their aiming beam/aiming dot setup using these bar codes:

- [Laser On Time](#) (page 6-20) and
- [Aim Duration](#) (page 6-13)

### **SE955 Scan Engine**

The scan engine can have its aiming beam/aiming dot setup using these bar codes:

- [Use Laser On Time \(page 6-20\)](#)
- [Aim Duration](#) (page 6-13), and
- [Scan Angle \(SE955 only\)](#) (page 6-34)

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

## **Aiming Dot**

### **How to get an aiming dot when there is no “Aiming Dot” parameter**

Set *Aim Duration* to .5 seconds and an aiming “dot” is sent while the scan trigger is held down. When the timer expires, the aiming beam widens and the bar code is read.

## Pre-Configured Default Values - MX7, MX7 Tecton, MX9

Parameter	Default SE955	Default SE1524
Set Default Parameter	All Defaults	All Defaults
<b>Scanning Options</b>		
Aim Duration	0.0 sec	0.0 sec

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

---

## **Set Default Parameter**

*Bar Code Decoder Engine = SE955*

### *Restore Defaults*

If custom defaults were set by scanning Write Custom Defaults, scan Restore Defaults to retrieve and restore the bar code reader's custom default settings. If no custom defaults were set, scan Restore Defaults to restore the factory default values.

### *Set Factory Defaults*

Restore the factory default values. If custom defaults were set, they are eliminated.

### *Write Custom Defaults*

Store the current bar code reader settings as custom defaults. Once custom default settings are stored, they can be recovered at any time by scanning the Restore Defaults bar code.

Restore Defaults

Set Factory Defaults

Write Custom Defaults

[See Return to Factory Default Settings](#) on page 1-2.

[See Reset to Factory Defaults using the LXEReset Bar Code](#) on page 6-12.

---

## **Set All Defaults**

*Bar Code Decoder Engine = SE1524*

Use the Set All Defaults parameter to reset all bar code reader parameters to their default values.

Refer to **Pre-Configured Default Values** for an alphabetical listing of all default values.

*Note: Scanning the Cancel bar code does not undo a Set All Defaults scan.*

Set All Defaults

### **Max On Timer and the Laser On Time synchronization**

When all parameters are reset to the default values, you must again set the [Laser On Time](#) (page 6-20) parameter to 1.5 seconds to match a device-specific default Max On Timer default value of 1.5 seconds.

Laser On Time default value is 3.0 seconds.

### **Reset to Factory Defaults using the LXEReset Bar Code**

The LXEReset bar code should only be scanned by mobile devices running Data Collection Wedge software.

This bar code must not be scanned by devices running Bar Code Scan Wedge software.

The following function-specific bar code is only used when it is necessary to return the decoder engine back to factory default values.

When the scan is successful, the mobile device emits a double beep and the Scan On indicator is amber. The decoding engine is not available for further bar code scanning until the Scan On indicator turns off. Scanning this bar code does not affect the mobile device's operating system, wireless client or installed software (e.g., AppLock) settings.

---

## Scanner Parameters – General

### Aim Duration

Bar Code Decoder Engine = SE1524 and SE955

*Note: For correct operation, reboot the mobile device after changing this value.*

When a bar code reader with an aim mode is triggered either by a Scan button press, or a Start\_Decode command, this parameter sets the duration the aiming pattern is seen before a scan attempt begins. It does not apply to the aim signal or the Aim\_On command. It is programmable in 0.1 second increments from 0.0 to 9.9 seconds. No aim pattern is visible when the value is 0.0.

To **set aim duration**, scan the bar code below:

Next scan two numeric bar codes that correspond to the desired aim duration. Times less than 1.0 second must have a leading zero. For example, to set an aim duration of 0.5 seconds, scan the bar code above, then scan the “0” and “5” bar codes on the [Keypad Number Symbols](#) (page 6-91) page. If you make an error, or wish to change your selection, scan the Cancel bar code on the Keypad Number Symbols page.

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

### Bi-Directional Redundancy

Bar Code Decoder Engine = SE1524 and SE955

Use this parameter to decide whether a bar code is successfully scanned in both directions before being decoded.

*Note: This parameter is only valid when a [Linear Code Type Security Level \(Redundancy Level\)](#) (page 6-21) has been enabled. The default for Security Level parameter is Level 1.*

Select an option by scanning either of the bar codes shown below.

Enable Bi-Directional Redundancy

\* Disable Bi-Directional Redundancy

---

## **Disable All Symbologies**

Bar Code Decoder Engine = SE955

Scan the bar code below to disable the decoding of all symbologies. Use this to simplify selecting a single symbology to decode by scanning this bar code, then scanning the desired enable code type bar code.

Note that the decoder can still decode parameter bar codes.

## **Data Options**

Bar Code Decoder Engine = SE1524 and SE955

### **Prefix and Suffix**

Note: Parameter [Scan Data Transmission Format](#) (page 6-15) must be set before selecting Prefix and Suffix values.

A prefix and/or one or two suffixes may be appended to scan data for use in data editing. These values are set by scanning four bar codes (resulting in a four digit number) that correspond to key codes for various mobile devices. See the table titled [ASCII Character Equivalents](#) (page 6-83).

If you wish to change your selection, scan this **Data Format Cancel** bar code:

### **Prefix**

To begin setting **Prefix** values, scan this bar code:

Next, scan four numeric bar codes that correspond to the computer keycode using the [Keypad Number Symbols](#) (page 6-91). *Default = Null.*

If you wish to change your selection, scan Cancel on the [Keypad Number Symbols](#) page.

### **Suffix 1**

To begin setting **Suffix 1** value, scan this bar code:

Next, scan four numeric bar codes that correspond to the computer keycode using [Keypad Number Symbols](#) (page 6-91). *Default = LF.*

---

If you wish to change your selection, scan Cancel on the *Keypad Number Symbols* page.

**Suffix 2**

To begin setting **Suffix 2** value, scan this bar code:

Next, scan four numeric bar codes that correspond to the computer keycode using [Keypad Number Symbols](#) (page 6-91). *Default = CR.*

If you wish to change your selection, scan Cancel on the *Keypad Number Symbols* page.

**Scan Data Transmission Format**

*Bar Code Decoder Engine = SE1524 and SE955*

*Note: Parameter [Prefix and Suffix](#) (page 6-14) should be set after setting this parameter.*

Use this option when you want to append a prefix and suffix to the decode data.

Set this parameter by scanning one of the following bar codes.

\* Data As Is

[Data] [Suffix 1]

[Data] [Suffix 2]

---

[Data] [Suffix 1] [Suffix 2]

[Prefix] [Data]

[Prefix] [Data] [Suffix 1]

[Prefix] [Data] [Suffix 2]

[Prefix] [Data] [Suffix 1] [Suffix 2]

Now you are ready to scan one of the [Prefix and Suffix](#) (page 6-14) bar codes.

---

### **Transmit Code ID Character**

*Bar Code Decoder Engine = SE1524 and SE955*

A code ID character identifies the code type of a scanned bar code. This may be useful when the bar code reader is decoding more than one code type. In addition to any single character prefix already selected, the code ID character is inserted between the prefix and the decoded symbol.

Scan one of the following bar codes to select either no code ID character, a Symbol Code ID character or an AIM Code ID character. *Default = No Code ID Character.*

#### **Transmit No Code ID Character**

#### **Transmit Symbol Code ID Character**

A	UPC-A, UPC-E, UPC-E1, EAN-8, EAN-13
B	Code 39, Code 32
C	Codabar
D	Code 128
E	Code 93
F	Interleaved 2 of 5
G	Discrete 2 of 5 or Discrete 2 of 5 IATA
H	Code 11
J	MSI Plessey
K	UCC/EAN-128
L	Bookland EAN
M	Trioptic Code 39
N	Coupon Code
R	GS1 DataBar Omnidirectional (RSS-14), GS1 Limited (RSS-Limited), GS1 Expanded (RSS-Expanded)

## Transmit AIM Code ID Character

Each AIM Code Identifier contains the three character string ]cm where:

] = Flag Character (ASCII 93)

c = Code Character

A	Code 39
C	Code 128
E	UPC/EAN
F	Codabar
G	Code 93
H	Code 11
I	Interleaved 2 of 5
M	MSI Plessey
S	D2 of 5, IATA 2 of 5
X	Code 39 Trioptic, Bookland EAN
e	GS1 DataBar (RSS)

m = Modifier Character

The modifier character is the sum of the applicable option values based on the following table.

Code Type	Option Value	Option
<b>Code 39</b>		
	0	No Check character or Full ASCII processing.
	1	Reader has checked one check character.
	3	Reader has checked and stripped check character.
	4	Reader has performed Full ASCII character conversion.
	5	Reader has performed Full ASCII character conversion and checked one check character.
	7	Reader has performed Full ASCII character conversion and checked and stripped check character.
		Example: A Full ASCII bar code with check character W, A+I+MI+DW, is transmitted as ]A7AimId where 7 = (3+4).
<b>Trioptic Code 39</b>		
	0	No option specified at this time. Always transmit 0.
		Example: A Trioptic bar code 412356 is transmitted as ]X0412356
<b>Code 128</b>		
	0	Standard data packet, No Function code 1 in first symbol position.
	1	Function code 1 in first symbol character position.
	2	Function code 1 in second symbol character position.

Code Type	Option Value	Option
		Example: A Code (EAN) 128 bar code with Function 1 character in the first position, <sup>FNC1</sup> Aim Id is transmitted as ]CIAimId
<b>Interleaved 2 of 5</b>		
	0	No check digit processing.
	1	Reader has validated check digit.
	3	Reader has validated and stripped check digit .
		Example: An I 2 of 5 bar code without check digit, 4123, is transmitted as ]I04123
<b>Codabar</b>		
	0	No check digit processing.
	1	Reader has checked check digit.
	3	Reader has stripped check digit before transmission.
		Example: A Codabar bar code without check digit, 4123, is transmitted as ]F04123
<b>Code 93</b>		
	0	No options specified at this time. Always transmit 0.
		Example: A Code 93 bar code 012345678905 is transmitted as ]G0012345678905
<b>MSI (Plessey)</b>		
	0	Single check digit checked.
	1	Two check digits checked.
	2	Single check digit verified and stripped before transmission.
	3	Two check digits verified and stripped before transmission.
		Example: An MSI Plessey bar code 4123, with a single check digit checked, is transmitted as ]M04123
<b>Discrete 2 of 5</b>		
	0	No options specified at this time. Always transmit 0.
		Example: A D 2 of 5 bar code 4123, is transmitted as ]S04123
<b>UPC/EAN</b>		
	0	Standard packet in full EAN country code format, which is 13 digits for UPC-A and UPC-E (not including supplemental data).
	1	Two digit supplement data only
	2	Five digit supplement data only
	4	EAN-8 data packet.
		Example: A UPC-A bar code 012345678905 is transmitted as ]E00012345678905
<b>Bookland EAN</b>		
	0	No options specified at this time. Always transmit 0.
		Example: A Bookland EAN bar code 123456789X is transmitted as ]X0123456789X

According to AIM standards, a UPC with supplemental bar code is transmitted in the following format:

]EO (UPC chars) (terminator) ]E2 (supplemental) (terminator)

Therefore, a UPC with two supplemental characters, 01234567890510, is transmitted to the host as a 21-character string, ]E00012345678905]E110.

---

## **Laser On Time**

*Bar Code Decoder Engine = SE1524 and SE955*

*Note: For correct operation, reboot the Mobile Device after changing this value.*

This parameter sets the maximum time decode processing continues during a scan attempt. It is programmable in 0.1 second increments from 0.50 to 25.5 seconds. If a label has not been decoded before this time expires and the session is terminated, the system regards it as a failed scan attempt.

To begin setting **Laser On Time**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired on time using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. Times less than 1.0 second must have a leading zero. *Default = 3.0 seconds.*

If you wish to change your number selection, scan Cancel on the *Keypad Number Symbols* page.

[See Laser On Time \(superseded\) on page 6-87.](#)

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

---

## **Linear Code Type Security Level (Redundancy Level)**

*Bar Code Decoder Engine = SE1524 and SE955*

Use this parameter to determine the security level appropriate for bar code quality. The security level indicates how many times the bar code must be successfully read by the bar code reader before being decoded.

There are four security levels. Higher security levels are selected for decreasing levels of bar code quality. As security levels increase, the bar code reader's aggressiveness decreases.

### **Linear Security Level Rules**

#### *Level 1 Rules*

The following code types must be successfully read twice before being decoded::

Codabar : All lengths

MSI Plessey : Length of 4 characters or less

D 2 of 5 : Length of 8 characters or less

I 2 of 5 : Length of 8 characters or less

#### *Level 2 Rules*

All code types must be successfully read twice before being decoded.

#### *Level 3 Rules*

Code types other than the following must be successfully read two times before being decoded. The following codes must be read three times:

MSI Plessey : Length of 4 characters or less

D 2 of 5 : Length of 8 characters or less

I 2 of 5 : Length of 8 characters or less

#### *Level 4 Rules*

All code types must be successfully read three times before being decoded.

Select an option by scanning one of the bar codes shown below. If you wish to change your selection, scan [Cancel on Keypad Number Symbols](#) (page 6-91).

*Note: Linear Code Type Security does not apply to Code 128.*

\* Level 1

Level 2

---

Level 3

Level 4

### ***Parameter Pass Through***

*Bar Code Decoder Engine = SE955*

Enable Parameter Pass Through to transmit bar codes in the following format, in Code 128, to the host:

<FNC3>L<any length data>

<FNC3>B<12 characters of data>

Note that the special Code 128 character <FNC3> must appear at the beginning of this data. However, if the appropriate data does not follow as shown above, it does not transmit to the host device.

Enable Parameter Pass Through

\* Disable Parameter Pass Through

---

## **Parameter Scanning**

*Bar Code Decoder Engine = SE1524 and SE955*

Use this parameter to decide whether bar code reader parameters can be set using the bar codes in this section.

*Note: When this parameter is disabled, scan the [Set All Defaults](#) (page 6-12) bar code to enable parameter scanning.*

When disabled, either scan the Enable Parameter Scanning bar code or the Set All Defaults bar code (or set this parameter to 01h via a serial command) to reset the parameter and bar codes in this section can then be scanned.

When enabled, bar code readers can be configured using the bar codes in this section.

Select a mode by scanning either of the bar codes shown below.

\* Enable Parameter Scanning

Disable Parameter Scanning

---

## **Power Mode**

Bar Code Decoder Engine = SE1524 and SE955

*Note: Honeywell mobile devices are designed to be operated in Low Power Mode. Honeywell recommends leaving this value unchanged.*

A parameter setting of **Continuous On** means the laser bar code reader will not power down until the mobile device is powered off.

A parameter setting of **Low Power** means the laser bar code reader will enter low power mode after one second of waiting for a Scan button press. Pressing the Scan button will begin the decode sequence.

Select a Power Mode by scanning either of the bar codes shown below.

Continuous On

\* Low Power

---

## Simple Serial Interface (SSI) Options

Bar Code Decoder Engine = SE1524 and SE955

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

Note: Baud Rate Parameter must remain at 9600 bps at all times.

### SSI Default Values

Bar Code Decoder Engine = SE1524 and SE955

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

Option	Default Value
<a href="#">Baud Rate</a>	9600
<a href="#">Beep on &lt; BEL &gt;</a>	Disable
<a href="#">Check Parity</a>	Enable
<a href="#">Decode Data Packet Format</a>	Unpacketed
<a href="#">Host Character Time-out</a>	200 msec
<a href="#">Host Serial Response Time-out</a>	2 sec
<a href="#">Intercharacter Delay</a>	0
<a href="#">Parity</a>	None
<a href="#">Software Handshaking</a>	Enable
<a href="#">Stop Bit Select</a>	1

### Baud Rate

Bar Code Decoder Engine = SE1524 and SE955

Baud rate is the number of bits of data transmitted per second. The bar code readers baud rate setting should match the data rate setting of the host device. If not, data may not reach the host device or may reach it in distorted form.

Default = 9600 bps.

Baud rate should always be set to 9600. If the baud rate is set to any other value but 9600, a transmit error will occur. Either scan the 9600 bps bar code or reset the mobile device to factory default (or last saved good default) values.

Set this parameter by scanning this bar code.

9600 bps

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

---

## **Decode Data Packet Format**

*Bar Code Decoder Engine = SE1524 and SE955*

This parameter selects whether decoded data is transmitted in raw format (unpacketed), or transmitted with the packet format as defined by the serial protocol.

If the raw format is chosen, ACK/NAK handshaking is automatically disabled for decode data.

Set this parameter by scanning either of the following bar codes.

Send Raw Decode Data

\* Send Packeted Decode Data

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

## **Host Character Time-out**

*Bar Code Decoder Engine = SE1524 and SE955*

This parameter determines the maximum time the decoder waits between characters transmitted by the host before discarding the received data and declaring an error. The time-out is set in 0.01 second increments from 0.01 seconds to 0.99 seconds. After scanning the bar code below, scan two numerical bar codes to set the desired time-out. *Default = 200 msec.*

To begin setting the **time-out value**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. Single digit numbers must have a leading zero. For example, a value of 300 msec is selected by scanning the “3” and the “0” numeric bar codes. A value of 30 msec is selected by scanning the “0” and the “3” bar codes.

If you wish to change your selection, scan Cancel on the Keypad Number Symbols page.

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

---

## **Host Serial Response Time-out**

*Bar Code Decoder Engine = SE1524 and SE955*

This parameter determines the maximum time the decoder waits for an ACK or NAK before resending. Also, if the decoder wants to send, and the host has already been granted permission to send, the decoder waits for the designated time-out before declaring an error. The delay period can range from 0.0 to 9.9 seconds in 0.1 second increments. After scanning the bar code below, scan two numerical bar codes to set the delay. *Default = 2 seconds.*

To begin setting the **time-out value**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. Time durations of less than 1.0 second require a leading zero. For example, a value of 4.5 seconds is selected by scanning the “4” and the “5” numeric bar codes. A value of 0.3 seconds is selected by scanning the “0” and the “3” bar codes.

If you wish to change your selection, scan Cancel on the Keypad Number Symbols page.

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

## **Intercharacter Delay**

*Bar Code Decoder Engine = SE1524 and SE955*

Select the intercharacter delay option matching host requirements. The intercharacter delay gives the host system time to service its receiver and perform other tasks between characters.

The delay period can range from no delay to 99 msec in 1 msec increments. After scanning the bar code below, scan two numerical bar codes to set the delay. *Default = 0 msec.*

To begin setting the **delay value**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. Time durations of less than 1 msec require a leading zero. For example, a value of 25 msec is selected by scanning the “2” and the “5” numeric bar codes. A value of 6 msec is selected by scanning the “0” and the “6” bar codes.

If you wish to change your selection, scan Cancel on the Keypad Number Symbols page.

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

---

## **Parity**

*Bar Code Decoder Engine = SE1524 and SE955*

A parity check bit is the most significant bit of each ASCII coded character. Select the parity type according to host device requirements.

### *Odd Parity*

The Odd parity bit has a value 0 or 1, based on data, to ensure that an odd number of 1 bits is contained in the coded character.

### *Even Parity*

The Even parity bit has a value 0 or 1, based on data, to ensure that an even number of 1 bits is contained in the coded character.

### *Mark Parity*

The parity bit is always 1.

### *Space Parity*

The parity bit is always 0.

### *No Parity*

No parity is required.

Set this parameter by scanning one of the following bar codes.

Odd Parity

Even Parity

Mark Parity

---

Space Parity

\* No Parity

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

### **Software Handshaking**

*Bar Code Decoder Engine = SE1524 and SE955*

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

*Default = Enable*

This parameter offers control of the data transmission process in addition to that offered by hardware handshaking. Hardware handshaking is always enabled and cannot be disabled by the user.

Scan one of the following bar codes to set software handshaking.

#### **Disable ACK/NAK Handshaking**

When this option is selected, the decoder will neither generate nor expect ACK/NAK handshaking packets.

#### **Enable ACK/NAK Handshaking**

When this option is selected, after transmitting data, the bar code reader expects either an ACK or NAK response from the host. The bar code reader will also ACK or NAK messages from the host when this option is selected.

The bar code reader waits up to the programmable [Host Serial Response Time-out](#) (page 6-27) to receive an ACK or NAK. If the bar code reader does not get a response in this time, it resends its data up to two times before discarding the data and declaring a transmit error.

---

## Stop Bit Select

Bar Code Decoder Engine = SE1524 and SE955

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream.

The number of stop bits selected (one or two) depends on the number the receiving computer is programmed to accommodate. Set the number of stop bits to match host device requirements.

Set this parameter by scanning one of the following bar codes.

\* One Stop Bit

Two Stop Bits

The SSI Options bar codes are directed toward the host programmer when writing host/bar code reader interface programs for different hosts. For help see [Technical Assistance](#) (page 8-1).

## Time-out Between Decodes, Same Symbol

Bar Code Decoder Engine = SE1524 and SE955

Use this parameter to prevent the beeper from continuously beeping when a symbol is left in the bar code reader's field of view. *Default = 1.0 Second.*

To begin setting **differing symbol timeout values**, scan this bar code:

Using the [Keypad Number Symbols](#) (page 6-91) at the end of this section, scan two numeric bar codes that represent the desired interval, in 0.1 second increments. Valid values are between 0.0 and 9.9 seconds. Single digit values must be predefined by a leading zero. For example, to set a timeout of 0.5 seconds, scan the Timeout/Decodes – Same bar code, then scan the number 0 and 5 bar codes.

If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

---

## **Transmit “No Read / Decode” Message**

*Bar Code Decoder Engine = SE1524 and SE955*

Use this parameter to decide whether a message is sent to the host when a bar code symbol does not decode.

When enabled, and a symbol does not decode within either:

- A trigger pull activates the laser and decode processing, the processing continues until a trigger release, or
- The laser decode processing continues until the Laser On Timeout is reached.

A “NR” (No Read) is transmitted to the host. Any prefix or suffixes which have been enabled are appended around this message.

When disabled, and a symbol does not decode, no message is sent to the host.

Select an option by scanning either of the bar codes shown below.

Enable No Read

\* Disable No Read

---

## Trigger Mode

Bar Code Decoder Engine = SE1524 and SE955

Use this parameter to determine when the laser is activated and decoding begins, how long the laser remains on and what determines the cessation of the laser scan and decode process.

### Level Mode

A trigger pull or Scan button press activates the laser and decode processing. The laser remains on and decode processing continues until a trigger release, a valid decode or the [Laser On Time](#) (page 6-20) time-out is reached.

### Pulse Mode

A trigger pull or Scan button press activates the laser and decode processing. The laser remains on and decode processing continues until a valid decode, or the Laser On Time-out is reached.

### Continuous Mode

The laser is always on and decoding.

[See Time-out Between Decodes, Same Symbol](#) on page 6-30.

### Blinking Mode

This trigger mode is used for triggerless scanning operations. Scanning range is reduced in this mode. This mode cannot be used with bar code readers that support an aim mode.

### Host Mode

Triggering signal comes from a host command. Any actual trigger pull or Scan button press will be interpreted by the bar code reader engine as a Level triggering option.

Select a trigger mode by scanning the appropriate bar code. If you wish to change your selection, scan Cancel on the [Keypad Number Symbols](#) (page 6-91).

\* Level

Pulse

---

Continuous

Blinking

Host

---

## **Scan Angle (SE955 only)**

*Bar Code Decoder Engine = SE955*

Choose one of the options below to set the scan angle to narrow or wide. Once the parameter bar code is scanned, the Scan Angle setting is persistently stored.

Select an option by scanning one of the bar codes shown below.

Narrow Angle (35°)

\* Wide Angle

See ["Scan Angle \(SE955 only\) superseded"](#) on page 6-88.

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

---

### **Scan Angle (SE1524 only)**

*Bar Code Decoder Engine = SE1524*

This parameter provides two options for the length of the laser bar code reading beam.

Select an option by scanning one of the bar codes shown below.

Alternate Angle

\* Normal Angle

---

## Scanner Parameters – Bar Code Type Specific

### Chinese 2 of 5

Bar Code Decoder Engine = SE1524 and SE955

When enabled, Chinese 2 of 5 symbols will be scanned, decoded and transmitted. Set this parameter by scanning either of the bar codes shown below.

Enable Chinese 2 of 5

\* Disable Chinese 2 of 5

### Codabar

Bar Code Decoder Engine = SE1524 and SE955

When enabled, Codabar symbols will be scanned, decoded and transmitted. Set this parameter by scanning either of the bar codes shown below.

Enable Codabar

\* Disable Codabar

---

### **CLSI Editing**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, the start and stop characters are stripped from the bar code and a space is inserted after the 1<sup>st</sup>, 5<sup>th</sup>, and 10<sup>th</sup> characters of a 14 character Codabar symbol.

Set this parameter by scanning either of the bar codes shown below.

*Note: Symbol length does not include start and stop characters.*

Enable CLSI Editing

\* Disable CLSI Editing

### **NOTIS Editing**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, the start and stop characters are stripped from a decoded Codabar symbol. Set this parameter by scanning either of the bar codes shown below.

Enable NOTIS Editing

\* Disable NOTIS Editing

---

## **Set Lengths for Codabar**

Bar Code Decoder Engine = SE1524 and SE955

Lengths for Codabar may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains. It also includes any start or stop characters.

See ["ASCII Character Equivalents" on page 6-83.](#)

### **One Discrete Length (Parameter L1)**

This option decodes only those codes containing a selected length. For example, when you want to scan only Codabar symbols containing 14 characters, scan the "Codabar One Discrete Length" bar code and then "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91). *Default = 5.*

To begin setting **one discrete length**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Two Discrete Lengths (Parameter L2)**

This option decodes only those codes containing two selected lengths. For example, when you want to scan only Codabar symbols containing 2 or 14 characters, scan the "Codabar Two Discrete Lengths" bar code and then "0", "2", "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 55.*

To begin setting **two discrete lengths**, scan this bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Length Within Range**

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only Codabar symbols containing between 4 and 12 characters, scan the "Codabar Length Within Range" bar code and then "0", "4", "1" and "2" bar codes using the [Keypad Number Symbols](#) (page 6-91) .

To begin setting **lengths within a range**, scan this bar code:

---

Next, scan numeric bar codes that correspond to the desired value using the Keypad Number Symbols. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

***Any Length***

This option decodes Codabar bar codes containing any number of characters.

To set **any length**, scan this bar code:

---

## Code 11

Bar Code Decoder Engine = SE1524 and SE955

When enabled, Code 11 symbols will be scanned, decoded and transmitted.

Set this parameter by scanning either of the bar codes shown below.

Enable Code 11

\* Disable Code 11

### Set Lengths for Code 11

Bar Code Decoder Engine = SE1524 and SE955

Lengths for Code 11 may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains. It also includes any start or stop characters.

See ["ASCII Character Equivalents" on page 6-83](#).

#### One Discrete Length (Parameter L1)

This option decodes only those codes containing a selected length. For example, when you want to scan only Code 11 symbols containing 14 characters, scan the "Code 11 One Discrete Length" bar code and then "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91) . *Default = 4*.

To begin setting **one discrete length**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

#### Two Discrete Lengths (Parameter L2)

This option decodes only those codes containing two selected lengths. For example, when you want to scan only Code 11 symbols containing 2 or 14 characters, scan the "Code 11 Two Discrete Lengths" bar code and then "0", "2", "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 55*.

---

To begin setting **two discrete lengths**, scan this bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

***Length Within Range***

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only Code 11 symbols containing between 4 and 12 characters, scan the “Code 11 Length Within Range” bar code and then “0”, “4”, “1” and “2” bar codes using the [Keypad Number Symbols](#) (page 6-91).

To begin **setting lengths within a range**, scan this bar code:

Next, scan numeric bar codes that correspond to the desired value using the Keypad Number Symbols. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

***Any Length***

This option decodes Code 11 bar codes containing any number of characters.

To set **any length**, scan this bar code:

---

### **Code 11 Check Digit Verification**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, this parameter checks the integrity of a Code 11 symbol to ensure it complies with the specified check digit algorithm.

*Note: Enable "Code 11 Check Digit Verification" when [Transmit Code 11 Check Digits](#) (page 6-43) is enabled.*

Set this parameter by scanning one of the bar codes shown below.

\* Disable this feature

One Check Digit

Two Check Digits

---

**Transmit Code 11 Check Digits**

Bar Code Decoder Engine = SE1524 and SE955

Note: [Code 11 Check Digit Verification](#) (page 6-42) must be enabled for this parameter to function.

Transmit (Enable)

\* Do Not Transmit (Disable)

---

## Code 128

Bar Code Decoder Engine = SE1524 and SE955

Set this parameter by scanning either of the bar codes shown below.

\* Enable Code 128

Disable Code 128

## GS1-128 (formerly UCC/EAN-128)

Bar Code Decoder Engine = SE1524 and SE955

Set this parameter by scanning either of the bar codes shown below.

\* Enable GS1-128

Disable GS1-128

GS1-128 is a convention for printing data fields with standard Code 128 bar code symbols. GS1-128 symbols are distinguished by a leading FNC 1 character as the first or second character in the symbol. Other FNC 1 characters are used to delineate fields.

When GS1-128 symbols are read, they are transmitted after special formatting strips off the leading FNC 1 character, and replaces other FNC 1 characters with the ASCII 29 (GS) control character.

When AIM symbology identifiers are transmitted, the modifier character indicates the position of the leading FNC 1 character according to AIM guidelines. For example, jc1 indicates a GS1-128 symbol with a leading FNC1 character.

Standard Code 128 bar codes which do not have a leading FNC 1 may still be used, but are not encoded according to the GS1-128 convention. Standard Code 128 and GS1-128 may be mixed in an application. The SE955 autodiscriminates between these symbols, and can enable or disable one or both code types.

The following table indicates the behavior of the SE955 in each of the four possible parameter settings.

Standard Code 128	UCC/EAN 128	Effect and Example
Disable	Disable	No Code 128 symbols can be read.
Disable	Enable	Read only symbols with leading FNC1.
		Examples:
		FNC1ABCD <sup>FNC1</sup> E are read as ABCD <sup>29</sup> E
		A <sup>FNC1</sup> BCD <sup>FNC1</sup> E are read as ABCD <sup>29</sup> E
		FNC1FNC1ABCD <sup>FNC1</sup> E are read as ABCD <sup>29</sup> E
		ABCD <sup>FNC1</sup> E cannot be read
		ABCDE cannot be read
Enable	Disable	Read only symbols without leading FNC1.
		Examples:
		FNC1ABCD <sup>FNC1</sup> E cannot be read
		A <sup>FNC1</sup> BCD <sup>FNC1</sup> E cannot be read
		FNC1FNC1ABCD <sup>FNC1</sup> E cannot be read
		ABCD <sup>FNC1</sup> E is read as ABCD <sup>29</sup> E
		ABCDE is read as ABCDE
Enable	Enable	Read both types of symbols.
		Examples:
		FNC1ABCD <sup>FNC1</sup> E are read as ABCD <sup>29</sup> E
		A <sup>FNC1</sup> BCD <sup>FNC1</sup> E are read as ABCD <sup>29</sup> E
		FNC1FNC1ABCD <sup>FNC1</sup> E are read as ABCD <sup>29</sup> E
		ABCD <sup>FNC1</sup> E is read as ABCD <sup>29</sup> E
		ABCDE is read as ABCDE

### **Lengths for Code 128**

Bar Code Decoder Engine = SE1524 and SE955

No length setting is required for Code 128. The default setting is Any Length.

---

## **Code 39**

*Bar Code Decoder Engine = SE1524 and SE955*

*Note: This parameter must be enabled when [Convert Code 39 to Code 32](#) (page 6-47) is to be enabled.*

Set this parameter by scanning either of the bar codes shown below.

\* Enable Code 39

Disable Code 39

## **Code 39 Check Digit Verification**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, this parameter checks the integrity of a Code 39 symbol to ensure it complies with specified algorithms. Only those Code 39 symbols which include a modulo 43 check digit are decoded when this parameter is enabled.

Set this parameter by scanning either of the bar codes shown below.

Enable Code 39 Check Digit Verification

\* Disable Code 39 Check Digit Verification

---

### **Code 32 Prefix**

*Bar Code Decoder Engine = SE1524 and SE955*

This parameter adds the prefix character “A” to all Code 32 bar codes.

*Note: When Code 32 Prefix is enabled, [Convert Code 39 to Code 32](#) (page 6-47) parameter must also be enabled.*

Set this parameter by scanning either of the bar codes shown below.

Enable Code 32 Prefix

\* Disable Code 32 Prefix

### **Convert Code 39 to Code 32**

*Bar Code Decoder Engine = SE1524 and SE955*

- Code 39 must be enabled in order for this parameter to function.
- When parameter Code 32 Prefix is to be enabled, this Convert Code 39 to Code 32 (Italian Pharma Code) parameter must also be enabled.

Set this parameter by scanning either of the bar codes shown below.

Enable Convert Code 39 to Code 32

\* Disable Convert Code 39 to Code 32

---

### **Code 39 Full ASCII Conversion**

*Bar Code Decoder Engine = SE1524 and SE955*

*Note: Code 39 Full ASCII and Trioptic Code 39 not be enabled simultaneously.*

When enabled, the ASCII character set assigns a code to letter, punctuation marks, numerals, and most control keystrokes on the keyboard.

The first 32 codes are non-printable and are assigned to keyboard control characters such as [Backspace] and [Return or Enter]. The other 96 are called printable codes because all but [Space] and [Delete] produce visible characters.

Code 39 Full ASCII interprets the bar code special character (\$ + % /) preceding a Code 39 character and assigns an ASCII character value to the pair.

See [ASCII Character Equivalents](#) on page 6-83.

Set this parameter by scanning either of the bar codes shown below.

Enable Code 39 Full ASCII Conversion

\* Disable Code 39 Full ASCII Conversion

---

## Set Lengths for Code 39

Bar Code Decoder Engine = SE1524 and SE955

Lengths for Code 39 may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains. If Code 39 Full ASCII is enabled, "Length Within a Range" or "Any Length" are the preferred options.

See [ASCII Character Equivalents](#) on page 6-83.

### Code 39 One Discrete Length (Parameter L1)

This option decodes only those codes containing a selected length. For example, when you want to scan only Code 39 symbols containing 14 characters, scan the "Code 39 One Discrete Length" bar code and then "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 2.*

To begin setting **one discrete length**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### Code 39 Two Discrete Lengths (Parameter L2)

This option decodes only those codes containing two selected lengths. For example, when you want to scan only Code 39 symbols containing 2 or 14 characters, scan the "Code 39 Two Discrete Lengths" bar code and then "0", "2", "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 55.*

To begin setting **two discrete lengths**, scan this bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### Code 39 Length Within Range

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only Code 39 symbols containing between 4 and 12 characters, scan the "Code 39 Length Within Range" bar code and then "0", "4", "1" and "2" bar codes using the [Keypad Number Symbols](#) (page 6-91) .

To begin setting **lengths within a range**, scan this bar code:

Next, scan numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

---

### **Code 39 Any Length**

This option decodes Code 39 bar codes containing any number of characters.

To set **any length**, scan this bar code:

### **Transmit Code 39 Check Digit**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, the check digit is transmitted with the data.

*Note: Parameter setting for "Code 39 Check Digit Verification" has no effect on this parameter value.*

Set this parameter by scanning either of the bar codes shown below.

Enable Transmit Code 39 Check Digit

\* Disable Transmit

---

### ***Trioptic Code 39***

*Bar Code Decoder Engine = SE1524 and SE955*

Trioptic Code 39 symbols always contain six characters.

*Note: When Trioptic Code 39 is enabled, set the Code 39 Full ASCII parameter to disabled. Both parameters should not be enabled simultaneously.*

Set this parameter by scanning either of the bar codes shown below.

Enable Trioptic Code 39

\* Disable Trioptic Code 39

---

## Code 93

Bar Code Decoder Engine = SE1524 and SE955

When enabled, Code 93 symbols will be scanned, decoded and transmitted. Set this parameter by scanning either of the bar codes shown below.

Enable Code 93

\* Disable Code 93

### Set Lengths for Code 93

Bar Code Decoder Engine = SE1524 and SE955

Lengths for Code 93 may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains.

See [ASCII Character Equivalents](#) on page 6-83.

#### One Discrete Length (Parameter L1)

This option decodes only those codes containing a selected length. For example, when you want to scan only Code 93 symbols containing 14 characters, scan the “Code 93 One Discrete Length” bar code and then “1” and “4” bar codes using the bar codes on the [Keypad Number Symbols](#) (page 6-91) . *Default = 4.*

To begin setting **one discrete length**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

---

### ***Two Discrete Lengths (Parameter L2)***

This option decodes only those codes containing two selected lengths. For example, when you want to scan only Code 93 symbols containing 2 or 14 characters, scan the “Code 93 Two Discrete Lengths” bar code and then “0”, “2”, “1” and “4” bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 55.*

To begin setting **two discrete lengths**, scan this bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### ***Length Within Range***

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only Code 93 symbols containing between 4 and 12 characters, scan the “Code 93 Length Within Range” bar code and then “0”, “4”, “1” and “2” bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section.

To begin setting **lengths within a range**, scan this bar code:

Next, scan numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### ***Any Length***

This option decodes Code 93 bar codes containing any number of characters.

To set **any length**, scan this bar code:

---

## Discrete 2 of 5

Bar Code Decoder Engine = SE1524 and SE955

When enabled, Discrete 2 of 5 (D 2 of 5) symbols will be scanned, decoded and transmitted. Set this parameter by scanning either of the bar codes shown below.

Enable Discrete 2 of 5

\* Disable Discrete 2 of 5

### Set Lengths for Discrete 2 of 5

Bar Code Decoder Engine = SE1524 and SE955

Lengths for D 2 of 5 may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains.

See [ASCII Character Equivalents](#) on page 6-83.

#### One Discrete Length (Parameter L1)

This option decodes only those codes containing a selected length. For example, when you want to scan only D 2 of 5 symbols containing 14 characters, scan the “D 2 of 5 One Discrete Length” bar code and then “1” and “4” bar codes using the bar codes on the [Keypad Number Symbols](#) (page 6-91) . *Default = 12.*

To begin setting **one discrete length**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

---

### **Two Discrete Lengths (Parameter L2)**

This option decodes only those codes containing two selected lengths. For example, when you want to scan only D 2 of 5 symbols containing 2 or 14 characters, scan the “D 2 of 5 Two Discrete Lengths” bar code and then “0”, “2”, “1” and “4” bar codes using the [Keypad Number Symbols](#) (page 6-91). *Default = 12.*

To begin setting **two discrete lengths**, scan this bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Length Within Range**

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only D 2 of 5 symbols containing between 4 and 12 characters, scan the “D 2 of 5 Length Within Range” bar code and then “0”, “4”, “1” and “2” bar codes using the [Keypad Number Symbols](#) (page 6-91).

To begin setting **lengths within a range**, scan this bar code:

Next, scan numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Any Length**

This option decodes D 2 of 5 bar codes containing any number of characters.

*Note: **Important** - Selecting this option may lead to misdecodes for D 2 of 5 codes.*

To set **any length**, scan this bar code:

---

## **GS1 DataBar (RSS) Codes**

Bar Code Decoder Engine = SE1524 and SE955

Default = Disabled

### **GS1 DataBar Omnidirectional (RSS-14)**

Enable GS1 DataBar Omnidirectional (RSS-14)

\* Disable GS1 DataBar Omnidirectional (RSS-14)

### **GS1 DataBar Limited (RSS-Limited)**

Enable GS1 DataBar Limited (RSS-Limited)

\* Disable GS1 DataBar Limited (RSS-Limited)

---

## ***GS1 DataBar Expanded (RSS-Expanded)***

Enable GS1 DataBar Expanded (RSS-Expanded)

\* Disable GS1 DataBar Expanded (RSS-Expanded)

## ***Convert GS1 DataBar (RSS) to UPC/EAN***

This parameter only applies to GS1 DataBar Omnidirectional (RSS-14) and GS1 DataBar Limited (RSS Limited) symbols. When this conversion is enabled, GS1 DataBar Omnidirectional (RSS-14) and GS1 DataBar Limited (RSS Limited) symbols encoding a single zero as the first digit have the leading '010' stripped and the bar code reported as EAN-13.

Bar codes beginning with two or more zeros but not six zeros have the leading '0100' stripped and the bar code reported as UPC-A. The UPC-A Preamble parameter to transmit the system character and country code applies to converted bar codes. Note that neither the system character nor the check digit can be stripped.

Enable Convert GS1 DataBar (RSS) to UPC/EAN

\* Disable Convert GS1 DataBar (RSS) to UPC/EAN

---

## ***Interleaved 2 of 5***

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, Interleaved 2 of 5 (I 2 of 5) symbols will be scanned, decoded and transmitted.

Set this parameter by scanning either of the bar codes shown below.

\* Enable Interleaved 2 of 5

Disable Interleaved 2 of 5

---

## ***1 2 of 5 Digit Verification***

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, this parameter checks the integrity of an I 2 of 5 symbol to ensure it complies with a specified algorithm, either USS (Uniform Symbology Specification) or OPCC (Optical Product Code Council).

Set this parameter by scanning one of the bar codes shown below.

\* Disable I 2 of 5 Check Digit Verification

USS Check Digit

OPCC Check Digit

---

### **Convert I 2 of 5 to EAN-13**

*Bar Code Decoder Engine = SE1524 and SE955*

A successful bar code conversion requires the following to be true:

- Interleaved 2 of 5 scanning is enabled.
- One of the I 2 of 5 lengths is set to 14.
- The bar code has a leading zero.
- The bar code has a valid EAN-13 check digit.

When enabled, the parameter converts a 14 character Interleaved 2 of 5 bar code into EAN-13 and transmits it to the host as EAN-13.

Set this parameter by scanning either of the bar codes shown below.

Enable Convert Interleaved 2 of 5 to EAN-13

\* Disable Convert Interleaved 2 of 5 to EAN-13

---

## Set Lengths for I 2 of 5

Bar Code Decoder Engine = SE1524 and SE955

Lengths for I 2 of 5 may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains. When settings lengths, single digit numbers must always be preceded by a leading zero.

See [ASCII Character Equivalents](#) on page 6-83.

### **One Discrete Length (Parameter L1)**

This option decodes only those codes containing a selected length. For example, when you want to decode I 2 of 5 symbols containing only 14 characters, scan the “I 2 of 5 One Discrete Length” bar code and then the “1” and “4” bar codes using the [Keypad Number Symbols](#) (page 6-91). *Default = 14.*

To begin setting **one discrete length**, scan this “I 2 of 5 One Discrete Length” bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Two Discrete Lengths (Parameter L2)**

This option decodes only those codes containing two selected lengths. For example, when you want to scan only I 2 of 5 symbols containing 6 or 14 characters, scan the “I 2 of 5 Two Discrete Lengths” bar code and then “0”, “6”, “1” and “4” bar codes to decode only I 2 of 5 symbols containing 6 or 14 characters. Use the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 14.*

To begin setting **two discrete lengths**, scan this “I 2 of 5 Two Discrete Lengths” bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

---

### **Length Within Range**

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only 1 2 of 5 symbols containing between 4 and 12 characters, scan the "1 2 of 5 Length Within Range" bar code and then "0", "4", "1" and "2" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section.

To begin setting **lengths within a range**, scan this "1 2 of 5 Length Within Range" bar code:

Next, scan numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Any Length**

This option decodes 1 2 of 5 bar codes containing any number of characters.

*Note: Important: Selecting this option may lead to misdecodes for 1 2 of 5 codes.*

To set **any length**, scan this "1 2 of 5 Any Length" bar code:

See ["Set Lengths for 1 2 of 5 \(superseded\)"](#) on page 6-89

### **Transmit 1 2 of 5 Check Digit**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, the check digit is transmitted with the data.

Parameter setting for 1 2 of 5 Check Digit Verification has no effect on this parameter value.

Set this parameter by scanning either of the bar codes shown below.

Enable Transmit 1 2 of 5 Check Digit

\* Disable Transmit 1 2 of 5 Check Digit

---

## **MSI Plessey**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, MSI Plessey symbols will be scanned, decoded and transmitted.

Set this parameter by scanning either of the bar codes shown below.

Enable MSI Plessey

\* Disable MSI Plessey

## **MSI Plessey Check Digit Algorithm**

*Bar Code Decoder Engine = SE1524 and SE955*

When the Two MSI Plessey Check Digits option is selected, an additional verification is required to ensure integrity. Either of the two following algorithms may be selected.

Set this parameter by scanning either of the algorithm bar codes shown below.

Mod 10/Mod 11

\* Mod 10/Mod 10

---

## MSI Plessey Check Digits

Bar Code Decoder Engine = SE1524 and SE955

Check digits placed at the end of the MSI Plessey bar code verify the integrity of the data. At least one check digit is always required. Check digits are not automatically transmitted with the data.

Note: When Two Check Digits is selected, an [MSI Plessey Check Digit Algorithm](#) (page 6-63) must also be selected.

Set the number of check digits to be included with the bar code by scanning either of the bar codes shown below.

\* One MSI Plessey check digit

Two MSI Plessey check digits

## Set Lengths for MSI Plessey

Bar Code Decoder Engine = SE1524 and SE955

Lengths for MSI Plessey may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains.

See [ASCII Character Equivalents](#) on page 6-83.

### One Discrete Length (Parameter L1)

This option decodes only those codes containing a selected length. For example, when you want to scan only MSI Plessey symbols containing 14 characters, scan the "MSI Plessey One Discrete Length" bar code and then "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91). *Default = 6.*

To begin setting **one discrete length**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

---

### **Two Discrete Lengths (Parameter L2)**

This option decodes only those codes containing two selected lengths. For example, when you want to scan only MSI Plessey symbols containing 2 or 14 characters, scan the “MSI Plessey Two Discrete Lengths” bar code and then “0”, “2”, “1” and “4” bar codes using the [Keypad Number Symbols](#) (page 6-91). *Default = 55.*

To begin setting **two discrete lengths**, scan this bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Length Within Range**

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only MSI Plessey symbols containing between 4 and 12 characters, scan the “MSI Plessey Length Within Range” bar code and then “0”, “4”, “1” and “2” bar codes using the [Keypad Number Symbols](#) (page 6-91).

To begin setting **lengths within a range**, scan this bar code:

Next, scan numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Any Length**

This option decodes MSI Plessey bar codes containing any number of characters.

*Note: Important: Selecting this option may lead to misdecodes for MSI Plessey codes.*

To set **any length**, scan this bar code:

---

### **Transmit MSI Plessey Check Digit**

*Bar Code Decoder Engine = SE1524 and SE955*

When enabled, the check digit is transmitted with the data.

Set this parameter by scanning either of the bar codes shown below.

Enable Transmit MSI Plessey Check Digit

\* Disable Transmit MSI Plessey Check Digit

### **UPC/EAN**

#### **UPC-A**

*Bar Code Decoder Engine = SE1524 and SE955*

Select an option by scanning either of the bar codes shown below.

\* Enable UPC-A

Disable UPC-A

---

**UPC-E**

*Bar Code Decoder Engine = SE1524 and SE955*

Select an option by scanning either of the bar codes shown below.

\* Enable

Disable

**UPC-E1**

*Bar Code Decoder Engine = SE1524 and SE955*

Select an option by scanning either of the bar codes shown below.

Enable UPC-E1

\* Disable UPC-E1

---

**EAN-8**

*Bar Code Decoder Engine = SE1524 and SE955*

Select an option by scanning either of the bar codes shown below.

\* Enable EAN-8

Disable EAN-8

**EAN-13**

*Bar Code Decoder Engine = SE1524 and SE955*

Select an option by scanning either of the bar codes shown below.

\* Enable EAN-13

Disable EAN-13

---

## **Bookland EAN**

*Bar Code Decoder Engine = SE1524 and SE955*

Select an option by scanning either of the bar codes shown below.

Enable Bookland EAN

\* Disable Bookland EAN

## **Bookland ISBN Format**

*Bar Code Decoder Engine = SE955*

Select one of the following formats for Bookland data when Bookland EAN is enabled.

- **Bookland ISBN-10** - The bar code reader reports Bookland data starting with 978 in traditional 10-digit format with the special Bookland check digit for backward-compatibility. Data starting with 979 is not considered Bookland in this mode.
- **Bookland ISBN-13** - The bar code reader reports Bookland data (starting with either 978 or 979) as EAN-13 in 13-digit format to meet the 2007 ISBN-13 protocol.

\* Bookland ISBN-10

Bookland ISBN-13

For Bookland EAN to function properly, first enable Bookland EAN using Enable/Disable Bookland EAN, then select either Decode UPC/EAN Supplementals, Autodiscriminate UPC/EAN Supplementals, or Enable 978/979 Supplemental Mode in [Decode UPC/EAN Supplementals](#) (page 6-76).

---

## **Check Digits**

*Bar Code Decoder Engine = SE1524 and SE955*

### **Transmit UPC-A Check Digit**

This parameter determines whether the symbol will be transmitted with or without the UPC-A check digit. Select an option by scanning either of the bar codes shown below.

\* Enable Transmit UPC-A Check Digit

Disable Transmit UPC-A Check Digit

### **Transmit UPC-E Check Digit**

This parameter determines whether the symbol will be transmitted with or without the UPC-E check digit. Select an option by scanning either of the bar codes shown below.

\* Enable Transmit UPC-E Check Digit

Disable Transmit UPC-E Check Digit

---

### **Transmit UPC-E1 Check Digit**

This parameter determines whether the symbol will be transmitted with or without the UPC-E1 check digit. Select an option by scanning either of the bar codes shown below.

\* Enable Transmit UPC-E1 Check Digit

Disable Transmit UPC-E1 Check Digit

### **Conversions**

*Bar Code Decoder Engine = SE1524 and SE955*

#### **Convert UPC-E to UPC-A**

When this parameter is enabled, UPC-E (zero suppressed) decoded data is converted to UPC-A format before transmission. After conversion, data follows UPC-A format and is affected by UPC-A programming selections (e.g., Preamble, Check Digit, etc.).

When disabled, UPC-E (zero suppressed) decoded data is transmitted without conversion.

Select an option by scanning either of the bar codes shown below.

Enable UPC-E to UPC-A conversion

\* Disable UPC-E to UPC-A conversion

---

### **Convert UPC-E1 to UPC-A**

When this parameter is enabled, UPC-E1 (zero suppressed) decoded data is converted to UPC-A format before transmission. After conversion, data follows UPC-A format and is affected by UPC-A programming selections (e.g., Preamble, Check Digit, etc.).

When disabled, UPC-E1 (zero suppressed) decoded data is transmitted without conversion.

Select an option by scanning either of the bar codes shown below.

Enable UPC-E1 to UPC-A conversion

\* Disable UPC-E1 to UPC-A conversion

### **Convert EAN-8 to EAN-13 Type**

When “EAN-8 Zero Extend” is enabled, this parameter setting labels the extended symbol as either an EAN-13 bar code or an EAN-8 bar code.

When “EAN-8 Zero Extend” is disabled, this parameter’s conversion setting is ignored.

Select an option by scanning either of the bar codes shown below.

\* Type is EAN-13

Type is EAN-8

---

## Preambles

Bar Code Decoder Engine = SE1524 and SE955

### UPC-A Preamble

A preamble is a lead-in character for UPC-A symbols transmitted to the host device. The lead-in characters are considered part of the symbol.

Data is sent to the host in the following format:

No Preamble	[data]
System Character	[schar] [data]
System Character and Country Code	[country code] [schar] [data]

Select an option by scanning one of the bar codes shown below.

No UPC-A Preamble  
<DATA>

\* System Character  
<SYSTEM CHARACTER><DATA>

System Character and Country Code  
("0" for USA)  
<COUNTRY CODE> <SYSTEM CHARACTER> <DATA>

---

### **UPC-E Preamble**

A preamble is a lead-in character for UPC-E symbols transmitted to the host device. The lead-in characters are considered part of the symbol.

Data is sent to the host in the following format:

No Preamble	[data]
System Character	[schar] [data]
System Character and Country Code	[country code] [schar] [data]

Select an option by scanning one of the bar codes shown below.

No UPC-E Preamble  
<DATA>

\* System Character  
<SYSTEM CHARACTER><DATA>

System Character and Country Code  
("0" for USA)  
<COUNTRY CODE> <SYSTEM CHARACTER> <DATA>

---

### **UPC-E1 Preamble**

A preamble is a lead-in character for UPC-E1 symbols transmitted to the host device. The lead-in characters are considered part of the symbol.

Data is sent to the host in the following format:

No Preamble	[data]
System Character	[schar] [data]
System Character and Country Code	[country code] [schar] [data]

Select an option by scanning one of the bar codes shown below.

No UPC-E1 Preamble  
<DATA>

\* System Character  
<SYSTEM CHARACTER><DATA>

System Character and Country Code  
("0" for USA)  
<COUNTRY CODE> <SYSTEM CHARACTER> <DATA>

---

## Supplementals

Bar Code Decoder Engine = SE1524 and SE955

### Decode UPC/EAN Supplementals

*Note: In order to minimize the risk of invalid data transmission, Honeywell recommends that you select whether to read or ignore supplemental characters.*

Supplementals are additionally appended characters (2 or 5) according to specific code format conventions (e.g., UPC-A + 2).

Select an option by scanning one of the bar codes shown below.

#### Decode UPC/EAN with Supplementals

UPC/EAN symbols without supplemental characters are not decoded.

#### \* Ignore UPC/EAN with Supplementals

When a UPC/EAN plus supplemental symbol is scanned, the UPC/EAN is decoded and the supplemental characters ignored.

#### Autodiscriminate UPC/EAN Supplementals

When this option is selected you must assign a value to the [Decode UPC/EAN Supplemental Redundancy](#) (page 6-79) parameter. A value of 5 or more is recommended.

#### Enable 378/379 Supplemental Mode

The bar code reader will identify supplementals for EAN-13 bar codes that start with a 378 or 379 prefix only. All other UPC/EAN codes are decoded immediately and the supplemental characters ignored.

---

**Enable 978/979 Supplemental Mode**  
If you select 978/979 Supplemental Mode and are scanning Bookland EAN bar codes, see [Bookland EAN](#) (page 6-69) to enable Bookland EAN, and select a format using [Bookland ISBN Format](#) (page 6-69).

**Enable 977 Supplemental Mode**

**Enable 414/419/434/439 Supplemental Mode**

**Enable 491 Supplemental Mode**

**Enable Smart Supplemental Mode**  
Applies to EAN-13 bar codes starting with any prefix listed previously.

---

**Supplemental User Programmable  
Type 1**

**Supplemental User Programmable  
Type 1 and 2**

**Smart Supplemental Plus User  
Programmable 1**

**Smart Supplemental Plus User  
Programmable 1 and 2**

---

### ***User-Programmable Supplementals***

When Supplemental User-Programmable option is selected from Decode UPC/EAN Supplementals, select **User-Programmable Supplemental 1** to set the 3-digit prefix. Then select the 3 digits using the [Keypad Number Symbols](#) (page 6-91).

#### **User-Programmable Supplemental 1**

#### **User-Programmable Supplemental 2**

When Supplemental User-Programmable option is selected from Decode UPC/EAN Supplementals, select **User-Programmable Supplemental 2** to set the 3-digit prefix. Then select the 3 digits using the [Keypad Number Symbols](#) (page 6-91).

### ***Decode UPC/EAN Supplemental Redundancy***

With Autodiscriminate UPC/EAN Supplementals selected, this option adjusts the number of times a symbol without supplementals will be decoded before transmission. The range is from 2 to 20 times. Five or above is recommended when decoding a mix of UPC/EAN symbols with and without supplementals, and the autodiscriminate option is selected. *Default = 7 Times.*

To begin **setting the decode redundancy value**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired value using the [Keypad Number Symbols](#) (page 6-91) . Single digit numbers must have a leading zero.

If you wish to change your selection, scan Cancel on the Keypad Number Symbols page.

---

### **EAN-8 Zero Extend**

*Bar Code Decoder Engine = SE1524 and SE955*

When this parameter is enabled, five leading zeros are added to decoded EAN-8 symbols to make them compatible in format to EAN-13 symbols. Use parameter [Convert EAN-8 to EAN-13 Type](#) (page 6-72) to label the extended symbol.

When disabled, EAN-8 symbols are transmitted as is and parameter “Convert EAN-8 to EAN-13 Type” setting is ignored.

Select an option by scanning either of the bar codes shown below.

Enable EAN-8 Zero Extend

\* Disable EAN-8 Zero Extend

### **UCC Coupon Extended Code**

*Bar Code Decoder Engine = SE1524 and SE955*

*Note: UCC Coupon Extended Code replaces UPC/EAN Coupon Code.*

The UCC Coupon Extended Code is an additional bar code adjacent to a UCC Coupon Code. To enable or disable UCC Coupon Extended Code, scan the appropriate bar code below.

Enable UCC Coupon Extended Code

\* Disable UCC Coupon Extended Code

---

## **UPC/EAN Security Level**

*Bar Code Decoder Engine = SE1524 and SE955*

Use this parameter to determine the security level appropriate for UPC/EAN bar code quality. There is an inverse relationship between security and bar code reader aggressiveness, so be sure to choose only that level of security necessary for any given application.

There are four decode security levels. Higher security levels are selected for decreasing levels of bar code quality. As security levels increase, the bar code reader aggressiveness decreases.

### *Security Level 0*

The default setting.

Allows the bar code reader to operate in its most aggressive state, while providing sufficient security in decoding "in-spec" UPC/EAN bar codes.

### *Security Level 1*

Misdecode 1,2,7,8

As bar code quality levels diminish, certain characters become prone to misdecodes before others (i.e., 1, 2, 7, 8).

Select this level upon misdecodes of poorly printed labels that are limited to 1, 2, 7 and 8.

### *Security Level 2*

Misdecodes not 1,2,7,8

Select this security level upon experiencing misdecodes of poorly printed bar codes and the misdecodes are not limited to characters 1,2,7 and 8.

### *Security Level 3*

Select this security level if you have tried security level 2 and are still experiencing misdecodes.

Using this level is an extreme measure against misdecoding severely out of spec bar codes. This level significantly impairs the decoding ability of the bar code reader. If this level of security is necessary, you should try to improve the quality of your bar codes.

Select an option by scanning one of the bar codes shown below. If you wish to change your selection, scan Cancel on the [Keypad Number Symbols](#) (page 6-91) .

\* Level 0

Level 1

---

Level 2

Level 3

## ASCII Character Equivalents

Values from 1128 through 1255 (hex values 80h through FFh) may also be set. But the conversion of those characters to printable characters is not standardized. Therefore, they are not included in the table.

Scan Value	Hex Value	Full ASCII Code 39 Encode Char.	Keystroke	ASCII Character
1000	00h	%U	CTRL 2	NUL
1001	01h	\$A	CTRL A	SOH

## Appendix

This appendix contains information that is superseded by newer information.  
It contains programming bar codes for Symbol SE955 scan engines only.

### **Laser On Time (superseded)**

*Bar Code Decoder Engine = SE955*

For correct operation, reboot the Mobile Device after changing this value.

*Note: The bar code on this page has been replaced with a newer bar code. See [Laser On Time](#) on page 6-20.*

This parameter sets the maximum time decode processing continues during a scan attempt. It is programmable in 0.1 second increments from 0.5 to 9.9 seconds. If a label has not been decoded before this time expires and the session is terminated, the system regards it as a failed scan attempt.

To begin setting **Laser On Time**, scan this bar code:

Next, scan two numeric bar codes that correspond to the desired on time using the [Keypad Number Symbols](#) at the end of this section. Times less than 1.0 second must have a leading zero. *Default = 3.0 seconds.*

If you wish to change your number selection, scan Cancel on the [Keypad Number Symbols](#) (page 6-91).

*Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.*

---

### **Scan Angle (SE955 only) superseded)**

Bar Code Decoder Engine = SE955

Note: The bar code on this page has been replaced with a newer bar code. [See Scan Angle \(SE955 only\) on page 6-34.](#)

Choose one of the options below to set the scan angle to narrow or wide. Once the parameter bar code is scanned, the Scan Angle setting is persistently stored.

Select an option by scanning one of the bar codes shown below.

Narrow Angle (35°)

\* Wide Angle

Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.

---

## **Set Lengths for I 2 of 5 (superseded)**

Bar Code Decoder Engine = SE955

Note: The bar codes on this page have been replaced with newer bar codes. See [Set Lengths for I 2 of 5](#) on page 6-61.

Lengths for I 2 of 5 may be set for:

- any length,
- one or two discrete lengths,
- or lengths within a specific range.

The length of a code refers to the number of characters, including check digits, the code contains.

See [ASCII Character Equivalents](#) on page 6-83.

### **One Discrete Length (Parameter L1)**

This option decodes only those codes containing a selected length. For example, when you want to scan only I 2 of 5 symbols containing 14 characters, scan the "I 2 of 5 One Discrete Length" bar code and then the "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91). *Default = 14.*

To begin setting **one discrete length**, scan this "I 2 of 5 One Discrete Length" bar code:

Next, scan two numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Two Discrete Lengths (Parameter L2)**

This option decodes only those codes containing two selected lengths. For example, when you want to scan only I 2 of 5 symbols containing 2 or 14 characters, scan the "I 2 of 5 Two Discrete Lengths" bar code and then "0", "2", "1" and "4" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section. *Default = 14.*

To begin setting **two discrete lengths**, scan this "I 2 of 5 Two Discrete Lengths" bar code:

Next, scan four numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

### **Length Within Range**

This option decodes a code type within a specified minimum and maximum range. For example, when you want to scan only I 2 of 5 symbols containing between 4 and 12 characters, scan the "I 2 of 5 Length Within Range" bar code and then "0", "4", "1" and "2" bar codes using the [Keypad Number Symbols](#) (page 6-91) at the end of this section.

To begin setting **lengths within a range**, scan this "I 2 of 5 Length Within Range" bar code:

---

Next, scan numeric bar codes that correspond to the desired value. Single digit numbers must have a leading zero. If you wish to change your number selection, scan Cancel on the Keypad Number Symbols page.

***Any Length***

This option decodes I 2 of 5 bar codes containing any number of characters.

***Important:*** Selecting this option may lead to misdecodes for I 2 of 5 codes.

To set **any length**, scan this “I 2 of 5 Any Length” bar code:

---

## ***Keypad Number Symbols***

The bar code labels shown below represent a numeric keypad, with decimal values 0 through 9. Each label can be scanned individually to enter a numeric value. Use these numeric value symbols to enter numeric input in the course of performing a scan engine system configuration.

## Decode Zones

### Introduction

The scan ranges listed in the following tables are based on the following factors:

- Decode zone is a function of various symbol characteristics including density, print contrast, wide-to-narrow ratio and edge acuity. Symbols test labels are examples of optimum quality bar codes.
- As distance decreases the visible scan line also decreases (visible scan length = 1.8 x distance to label x TAN (scan angle / 2)). The useable scan length is approximately 90% of visible scan line and must fully encompass the bar code label to be successfully decoded. On larger symbol densities of 20 mil, 40 mil and 55 mil, this affects minimum decode distance.
- + / - 5° pitch is used to reduce the inhibiting effects of spectral reflection (glare) near 0° of the scan head aspect to the bar code. Optimal operation is obtained at 2° to 15° pitch offset.
- Scan rate of 25 + / - scans second with bi-directional redundancy.
- The long range and advanced long range scanners support the aim-mode feature which allows generation of the laser for aiming prior to actual bar code decoding with a duration from 1 sec to 8 sec.

The following "good scan and decode" ranges (decode zones) are related to a specific scan engine either integrated or connected to your mobile device. If you do not see your type of scan engine listed, you may be using a tethered Bluetooth bar code scanner or a serial port connected bar code scanner (these types of external scanners are not included in this list).

*Note: When MX7 is listed in the 'Valid for' table, it represents the MX7 running Windows® CE 5.*

### Bar Code Reader and Device Chart

Device	BTRS	HX2	HX3	Marathon	MX3Plus	MX7	MX7 Tecton	MX8	MX9
<b>Reader</b>

Note: Performance may be impacted by bar code quality and environmental conditions.

## 1D Linear Imager, EV-15

Valid for	MX7	MX8
-----------	-----	-----

Near ranges are largely dependent upon the width of the bar code and the scan angle.

Symbol Density	Measured Working Ranges		Guaranteed Working Ranges	
	Near	Far	Near	Far
5 mil	2.6 in / 6.6 cm	6.7 in / 17.0 cm	3.9 in / 9.9 cm	6.7 in / 17.0 cm
10 mil	1.8 in / 4.6 cm	12.0 in / 30.5 cm	2.4 in / 6.1 cm	9.4 in / 23.9 cm
20 mil	1.1 in / 2.8 cm	12.3 in / 31.2 cm	1.6 in / 4.1 cm	12.2 in / 31.9 cm
40 mil	2.5 in / 6.3 cm	21.3 in / 54.1 cm	3.0 in / 7.6 cm	15.7 in / 39.9 cm

## 2D Area Imager, 5300

Valid for	MX7 Tecton	MX8	MX9
-----------	------------	-----	-----

Honeywell supports the following scan ranges in light levels above 10 lux.

Code Size	Distance (Smart Focus [SF])	
	Near	Far
MaxiCode 35 mil	2 inches / 5.1 cm	10 inches / 25.4 cm
Data Matrix 8.3 mil	3.4 inches / 8.6 cm	5.7 inches / 14.5 cm
Data Matrix 15 mil (ECC200)	1.8 inches / 4.6 cm	7.5 inches / 19 cm
PDF417 10 mil (ECL4)	2.2 inches / 5.6 cm	7.6 inches / 19.3 cm
PDF417 8.3 mil (ECL4)	2.4 inches / 6.1 cm	6.8 inches / 17.3 cm
PDF417 6.6 mil (ECL4)	2.8 inches / 7.1 cm	6.0 inches / 15.2 cm
Code 39 15 mil	1.5 inches / 3.8 cm	9.2 inches / 23.4 cm
Code 39 10 mil	2.2 inches / 5.6 cm	7.6 inches / 19.3 cm
Code 39 8 mil	2.3 inches / 5.8 cm	6.8 inches / 17.3 cm
Code 39 7.5 mil	2.5 inches / 6.4 cm	6.5 inches / 16.5 cm
Code 39 5 mil	3.6 inches / 9.1 cm	4.2 inches / 10.7 cm
UPC 13 mil, 100%	2 inches / 5.1 cm	8.9 inches / 22.6 cm
QR Code 8.3 mil	3.3 inches / 8.4 cm	5.4 inches / 13.7 cm
QR Code 15 mil	2.2 inches / 5.6 cm	7.2 inches / 18.3 cm

## 2D Area Imager, 5380

Valid for	MX7
-----------	-----

Honeywell supports the following scan ranges in light levels above 10 lux.

Code Size	Distance (Smart Focus [SF])	
	Near	Far
MaxiCode 35 mil	2 inches / 5.1 cm	10 inches / 25.4 cm
Data Matrix 8.3 mil	3.4 inches / 8.6 cm	5.7 inches / 14.5 cm
Data Matrix 15 mil (ECC200)	1.8 inches / 4.6 cm	7.5 inches / 19 cm
PDF417 10 mil (ECL4)	2.2 inches / 5.6 cm	7.6 inches / 19.3 cm
PDF417 8.3 mil (ECL4)	2.4 inches / 6.1 cm	6.8 inches / 17.3 cm
PDF417 6.6 mil (ECL4)	2.8 inches / 7.1 cm	6.0 inches / 15.2 cm
Code 39 15 mil	1.5 inches / 3.8 cm	9.2 inches / 23.4 cm
Code 39 10 mil	2.2 inches / 5.6 cm	7.6 inches / 19.3 cm
Code 39 8 mil	2.3 inches / 5.8 cm	6.8 inches / 17.3 cm
Code 39 7.5 mil	2.5 inches / 6.4 cm	6.5 inches / 16.5 cm
Code 39 5 mil	3.6 inches / 9.1 cm	4.2 inches / 10.7 cm
UPC 13 mil, 100%	2 inches / 5.1 cm	8.9 inches / 22.6 cm
QR Code 8.3 mil	3.3 inches / 8.4 cm	5.4 inches / 13.7 cm
QR Code 15 mil	2.2 inches / 5.6 cm	7.2 inches / 18.3 cm

## Short Range Laser Scanner (SE955I)

Valid for	MX3Plus	MX7	MX7 Tecton	MX8	MX9
-----------	---------	-----	------------	-----	-----

Factory Default Scan Angle -- Wide (47°)

Symbol Density	Typical Working Ranges		Guaranteed Working Ranges	
	Near	Far	Near	Far
4 mil	1.0 in / 2.50 cm	5.50 in / 13.97 cm	2.20 in / 5.60 cm	3.20 in / 8.13 cm
5 mil	1.25 in / 3.18 cm	8.00 in / 20.32 cm	2.20 in / 5.60 cm	5.50 in / 13.97 cm
7.5 mil	1.50 in / 3.81 cm	13.00 in / 33.02 cm	2.00 in / 5.08 cm	9.50 in / 24.13 cm
10 mil	1.50 in / 3.81 cm	18.00 in / 45.72 cm	1.75 in / 4.45 cm	14.00 in / 35.56 cm
13 mil	1.50 in / 3.81 cm	24.00 in / 60.96 cm	1.75 in / 4.45 cm	18.00 in / 45.72 cm
15 mil	1.50 in / 3.81 cm	28.00 in / 71.12 cm	1.75 in / 4.45 cm	21.00 in / 53.34 cm
20 mil	1.75 in / 4.45 cm	33.00 in / 83.82 cm	*	27.00 in / 68.58 cm
40 mil	*	36.00 in / 91.44 cm	*	28.00 in / 71.12 cm
55 mil	*	45.00 in / 114.30 cm	*	34.00 in / 86.36 cm

\* Near ranges are largely dependent upon the width of the bar code and the scan angle.

## Base Laser Scanner (SE955E)

Valid for	MX7	MX7 Tecton	MX8
-----------	-----	------------	-----

Note: Base Laser scanner, 955E does not support aim mode. Any attempt to adjust the aiming beam using the 955 bar codes in this guide will fail. The Base Laser scanner does not decode Codablock, Code93i, or Telepen symbologies.

Factory Default Scan Angle -- Wide (47°)

Symbol Density	Typical Working Ranges		Guaranteed Working Ranges	
	Near	Far	Near	Far
4 mil	1.50 in / 3.81 cm	5.50 in / 13.97 cm	*	3.20 in / 8.13 cm
5 mil	1.80 in / 4.57 cm	8.00 in / 20.32 cm	*	5.50 in / 13.97 cm
7.5 mil	2.20 in / 5.59 cm	13.00 in / 33.02 cm	*	9.00 in / 22.06 cm
10 mil	2.20 in / 5.59 cm	18.00 in / 45.72 cm	*	13.00 in / 33.02 cm
13 mil	2.20 in / 5.59 cm	24.00 in / 60.96 cm	2.5 in / 6.35 cm	17.00 in / 43.18 cm
15 mil	2.20 in / 5.59 cm	25.00 in / 63.50 cm	*	18.00 in / 45.72 cm
20 mil	2.50 in / 6.35 cm	26.00 in / 66.04 cm	*	18.00 in / 45.72 cm
40 mil	*	28.00 in / 71.12 cm	*	19.00 in / 48.26 cm
55 mil	*	32.00 in / 81.28 cm	*	23.00 in / 58.42 cm

\* Near ranges are largely dependent upon the width of the bar code and the scan angle.

## Multi-Range "LORAX" Laser (SE1524ER)

Valid for	MX7	MX7 Tecton	MX9
-----------	-----	------------	-----

Factory Default Scan Angle -- 13.5 degrees

Symbol Density	Typical Working Ranges		Guaranteed Working Ranges	
	Near	Far	Near	Far
7.5 mil	2.0 in / 5.08 cm	22.00 in / 55.88 cm	6.00 in / 15.24 cm	15.0 in / 38.10 cm
10 mil	4.0 in / 10.16 cm	34.0 in / 86.36 cm	6.0 in / 15.24 cm	30.0 in / 76.20 cm
15 mil	5.0 in / 12.70 cm	71.0 in / 180.34 cm	7.0 in / 17.78 cm	50.0 in / 127.00 cm
20 mil	5.0 in / 12.70 cm	96.0 in / 243.84 cm	7.0 in / 17.78 cm	70.0 in / 177.80 cm
55 mil	15.0 in / 38.10 cm	180.0 in / 457.20 cm	17.0 in / 43.18 cm	155.0 in / 393.70 cm
70 mil reflective	See note	367.0 in / 932.18 cm	See note	325.0 in / 825.50 cm
100.mil reflective	See note	542.0 in / 1376.68 cm	See note	480.0 in / 1219.20 cm

Note: Near range on reflective bar codes determined by degree of reflectivity and width of bar code.

\* Near ranges are largely dependent upon the width of the bar code and the scan angle. Working range specifications at temperature 23° C.

## *Customer Support*

### ***Technical Assistance***

If you need assistance installing or troubleshooting your device, please contact us by using one of the methods below:

**Knowledge Base:** [www.hsmknowledgebase.com](http://www.hsmknowledgebase.com)

Our Knowledge Base provides thousands of immediate solutions. If the Knowledge Base cannot help, our Technical Support Portal (see below) provides an easy way to report your problem or ask your question.

**Technical Support Portal:** [www.hsmsupportportal.com](http://www.hsmsupportportal.com)

The Technical Support Portal not only allows you to report your problem, but it also provides immediate solutions to your technical issues by searching our Knowledge Base. With the Portal, you can submit and track your questions online and send and receive attachments.

**Web form:** [www.hsmcontactsupport.com](http://www.hsmcontactsupport.com)

You can contact our technical support team directly by filling out our online support form. Enter your contact details and the description of the question/problem.

**Telephone:** [www.honeywellaidc.com/locations](http://www.honeywellaidc.com/locations)

For our latest contact information, please check our website at the link above.

### ***Product Service and Repair***

Honeywell International Inc. provides service for all of its products through service centers throughout the world. To obtain warranty or non-warranty service, please visit [www.honeywellaidc.com](http://www.honeywellaidc.com) and select **Support > Contact Service and Repair** to see your region's instructions on how to obtain a Return Material Authorization number (RMA #). You should do this prior to returning the product.
